| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-1** | **P1** | Conflict | Does storefront checkout write anything other than the shipping address back onto the roster? The schema says the address write-back follows the "same pattern as Name on Jersey", but Epic 3 says address write-back is "the one order → roster path". If a rostered player's Jersey Number or Name on Jersey is blank and the shopper enters one at checkout, does it fill the roster? If it doesn't, is "ordered #12 · roster blank" a divergence? | OI-1. p.5 Player Shipping Address: "if left blank, the parent/player supplies it at storefront checkout and it writes back onto the roster (same pattern as Name on Jersey)"; p.12: "Optional entry … (mirrors Name on Jersey)"; p.12: "Write-back is the one order → roster path, and it is not reversible."; p.2: "Personalization is snapshotted onto the order line at purchase and is never re-read from the roster afterward" | **A) Blank Jersey Number and Name on Jersey also fill from checkout, using the same rules as the address (fill only when blank, with a "From checkout" badge), and the spec text "the one order → roster path" is corrected (recommended: it matches "same pattern" and avoids false divergences). B) Only the address writes back, "same pattern" means only "optional for the rep", and a blank roster value next to an ordered value is not shown as a divergence. C) Only the address writes back, and blank vs ordered is shown as a divergence.** | The checkout → roster data flow and the divergence comparison can't be built. Choosing wrongly either overwrites rep data or shows false divergences on every roster where the rep left numbers blank. | Partly answered → master Q-6 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-2** | **P1** | Gap | What happens to placed orders, shipping containers, pending Roster Bank captures and fulfillment mapping when a team that has orders is deleted? Is deleting a team (or a division whose teams have orders) blocked, warned or permitted? | OI-11. p.8: "teams can be added to a division or standalone, renamed, and deleted with confirmation"; p.10: "Deleting a team is a separate action in Epic 0 and removes the team along with any roster it holds."; p.20: "team deletion must remove the team from shared state, which product assignment and shipping containers consume. Neither clear nor delete may destroy pending Roster Bank captures"; p.3: Team is "The unit everything else keys off: product assignment, shipping containers, fulfillment mapping, and the team code." | **A) Block deletion of a team that has any placed order or pending capture, give the reason, and offer Archive/hide instead (recommended). B) Soft-delete: hide the team in the workspace but keep its code, container and captures for routing; captures move to an "unassigned" Bank bucket. C) Hard delete after a confirmation that lists the affected orders and captures.** | Paid orders could lose their routing (container and team code) and pending captures could be orphaned. Data integrity for live orders is at stake. | Open → master Q-7 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-3** | **P1** | Gap | How does the platform decide that a storefront order "matches" an existing player record? This decides whether the order writes back to that record or creates a Roster Bank capture. When a matched record already has an address, does checkout overwrite it or leave it alone? | OI-16. p.12: "write-back completes a record that already exists. Where no matching player record exists, the order does not write back — it creates a Roster Bank capture instead (Epic 5). These are the two directions of the same plumbing and must not both fire for one order."; p.10: "the row menu copies a per-player store invite link" | **A) A match exists only when the shopper arrived through that player's per-player invite link (or picked their own name from the team's roster at the storefront). Otherwise the order creates a capture. A non-blank roster address is never overwritten (recommended: deterministic, no fuzzy matching). B) Also match on contact email, or on first + last name within the selected team. C) Defer to the Roster-Optional Architecture spec, Epic C. Please name the exact rule.** | The "must not both fire" rule can't be implemented or tested. Mis-matching writes one family's address onto another player's record, or creates duplicate captures for players already on the roster. | Open → master Q-8 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-4** | **P1** | Conflict | Is a division-wide product assignment a stored rule that new teams inherit automatically, or a fan-out to the existing teams at drop time? Epic 6 says it has been decided, but Dependencies says it is still open. | OI-20. p.17 Epic 6: "A product assigned to a division applies to every team in that division, including teams added to the division after the assignment was made. No re-assignment step is required when a team is added"; p.21 Dependencies: "the inheritance rule for teams added to a division after a division-wide assignment is open (see Epic 6) and determines whether division scope is a stored rule or a drop-time fan-out." | **A) A stored division-scope rule, resolved at read time, so new teams inherit and rows show "via division". Remove the "open" sentence from Dependencies (recommended, as Epic 6 states). B) A drop-time fan-out to the current teams only, where new teams get nothing, and Epic 6 is amended.** | The assignment data model (stored scope vs per-team rows), the "via division" rendering, Home C-07 and the Products tab join all depend on this. Building the wrong model means a migration. | Open → master Q-9 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-5** | **P1** | Conflict | Is Move to team allowed for a player who has team-gear orders? The spec marks the refusal OPEN: it contradicts the governing rule but protects freight routing. | OI-21. p.18: "Given a player with one or more team-gear orders, when a move is attempted, then the move is refused, the control is disabled, and the reason is stated."; p.18: "OPEN — the order-state block above should be reconsidered. It is now the only hard block in this tab … Two candidate resolutions: keep the refusal, or permit the move and state the freight consequence plainly on the confirmation. Recommend the latter, but it is a fulfillment decision … should be confirmed with the Orders spec before changing."; p.2: "Roster edits are never blocked by order state." | **A) Permit the move. The confirmation states that existing orders still ship to the origin team's container/manager, and pending orders stay with their origin group (spec recommendation; needs Orders-spec sign-off). B) Keep the refusal, and amend the governing rule to list Move as the only exception. C) Permit the move and re-route pending (unsubmitted) orders to the destination container.** | Epic 7 behaviour, its ACs and the bulk-move result messaging can't be finalised, and the decision depends on another spec owner (Orders). | Partly answered → master Q-27 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-6** | **P2** | Gap | Please provide a permission matrix for "store managers (reps, team managers, league directors)". Which of these actions can a team manager or league director take: add/edit/delete players, Clear/Delete Roster, change the duplicate policy, move players, create/delete teams and divisions, edit fulfillment mapping, commit captures, assign or edit products? Is a team manager limited to their own team(s)? | OI-24. p.2: "store managers (reps, team managers, league directors) build and manage team structure, and populate rosters"; user stories p.6–7 say "As a rep or team manager" for add/edit/delete/clear but "As a rep" for divisions, duplicate policy, products and the Bank; p.21: "Assignment permissions follow the Products tab's existing rules; this surface adds no new authority." Related: Store Home Q-8 (Team Manager Portal has "Reporting and Rosters"). | **A) Reps: everything. Team managers: player CRUD, CSV import, Clear Roster and Share links for their mapped team(s) only, with no structure, policy, product, Bank or Delete Roster actions. League directors: same as reps but no product edits (recommended). B) All three roles have equal rights in the workspace.** | Authorisation can't be built or tested, and team managers could delete other teams' data or edit pricing from the product modal. | Partly answered → master Q-5 |
| **Q-7** | **P2** | Gap | How is a roster entity created, and what is its name? Is there an explicit "Create roster" action, or is a roster created implicitly by the first manual add, CSV upload, inbound player move or capture commit? Where does the name in the toast 'Roster "name" deleted' come from? On a Single-Team store, does the one team always have a roster? | OI-13. p.3: "Optional — a team may have no roster. Once created, a roster is attached to exactly one team, and one team holds at most one roster."; p.15: "If the team has no roster yet, committing the first capture creates one."; p.10: 'a success toast confirms ("Roster "name" deleted")'; p.10: "Not offered on a Single-Team store's only roster — use Clear Roster there."; p.7: "the My Team tab drops straight into the team's player table" | **A) A roster is created implicitly by the first player added through any path (add row, CSV, move-in, capture commit). It has no separate name, and the toast uses the team name. Single-Team stores get their roster at store creation, and it can't be deleted (recommended). B) Explicit "Create roster" button with a roster name field.** | The data model (roster name field), the empty-team UI, the Move/CSV paths for teams with no roster, and the Single-Team landing state are all undefined. | Open → master Q-28 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-8** | **P2** | Gap | How does this tab behave on store types other than League and Single-Team Locker, for example Pop-up and Always-on (Store Home lists four store variants)? Which of these apply: the division tier, Delete Roster, Epic 6 product surfaces, and duplicate-policy controls? | p.3: "In a Single-Team Locker store there is no division tier and no grouping UI"; p.10: "Given a roster in a League store, when I click Delete Roster…"; p.15: "League stores only. A Single-Team Locker has one team"; Store Home p.14 store-variant table: "League", "Individual Team (Single-Team Locker)", "Pop-up", "Always-on" | **A) Pop-up and Always-on are lifecycle/window variants of a League or Single-Team store, not structural types, so the tab follows the underlying structural type (recommended; please confirm). B) Pop-up stores have no roster tab. C) Provide a per-type matrix.** | The tab's rendering rules and the Delete Roster/Epic 6 gating are undefined for half of the store variants. | Answered → master A-3 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-9** | **P2** | Ambiguous | Is Jersey Number stored as an integer or as a 2-character string? Are "0" and "00" different numbers? Is "7" the same as "07"? Is the "roster's full number range" always 00–99, or can it be configured per roster? Is the add row/edit drawer a typed 2-digit input, a grid picker, or both? | OI-3. p.4: "Jersey Number Optional Integer, 00–99 … 2-digit numeric input."; p.13: "Number entry presents the roster's full number range as a grid with taken numbers greyed out"; p.22: "jersey integer 00–99" | **A) Store a string of 1–2 digits. "0" and "00" are distinct, while "7" and "07" are the same and normalised to "7". The range is fixed at 0–99 plus 00 (101 values) for every roster (recommended: matches how jerseys are printed). B) Integer 0–99 only, with no "00" (100 values). C) The range is configurable per roster. For entry, the add row and drawer open the grid and also accept typed digits, with the inline error as the backstop for typed entry (recommended).** | The schema type, the uniqueness check, the picker grid size and the CSV parsing all depend on this. An integer column makes "00" unrepresentable. | Open → master Q-29 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-10** | **P2** | Gap | Is jersey/garment size a field on the player record? Dependencies say size is snapshotted onto the order line next to roster values, and the problem statement lists sizes as roster data, but the schema has no Size field. | OI-2. p.1: "requiring the rep to assemble one — names, numbers, emails, sizes, addresses — before a store is useful"; p.20: "jersey number, name on jersey, size, and shipping address are copied onto the order line at purchase"; p.3–6 player schema: First Name, Last Name, Jersey Number, Name on Jersey, Contact Email, Contact Phone Number, Player Shipping Address, Associated Emails (no Size) | **A) Size is chosen per order at the storefront only, not stored on the roster; correct the problem statement and clarify Dependencies (recommended). B) Add an optional Size field (Youth/Adult + size) to the schema and CSV template, with pre-fill at the PDP, and include it in divergence.** | Schema, CSV template, pre-fill and divergence scope are uncertain. If Size is on the roster, divergence/update must cover it. | Partly answered → master Q-30 |
| **Q-11** | **P2** | Ambiguous | What counts as a "contact channel" for sending? Can Send Reminder and Share Team Store Link be sent by SMS to a phone-only player, or are they email only? Does a player with Associated Emails but no Contact Email count as reachable? | OI-14. p.6: "A record carrying neither an email nor a phone number … Share Team Store Link offers copy-only (no send) for that player, and Send Reminder is disabled with a reason."; p.10: "Players with no email contribute no recipient and are listed as copy-only in the modal"; p.22: "Sharing requires an email channel for the roster template and store-link sends" | **A) Email only, for both share and reminders. A phone-only player is copy-only for share and reminder is disabled; Associated Emails count as a channel. Correct p.6 to say "no email" (recommended, since only email sending is specified). B) SMS is supported. Specify the provider, consent and opt-out handling.** | The enable/disable logic and reason copy for two actions, the recipient pools and the "contact channel" metric are inconsistent; SMS would also need a provider and compliance work. | Open → master Q-31 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-12** | **P2** | Gap | What happens to a team's division-scoped product assignments, fulfillment mapping and team code when the team leaves its division, whether because the division is deleted or (if supported) because the team moves to another division? Can a team be moved between divisions at all? | OI-7, OI-8. p.8: "Deleting a division keeps its teams — they become standalone teams, dropping the division's branding, and each keeps its roster and players intact."; p.20: "Division deletion must re-home teams as standalone rather than deleting them, carrying their rosters with them."; p.21: "They must be generated deterministically per division and team, stamped onto orders"; p.8: "each division routes orders to the league manager, a division manager, or individual team managers" | **A) Teams can't be moved between divisions in v1. On division delete, teams lose "via division" products (shown with a warning listing the products lost), fall back to league-manager mapping, and keep their existing team code (recommended). B) Convert inherited assignments into direct assignments so coverage isn't lost. C) Support moving a team between divisions with the same rules.** | Deleting a division could silently strip product coverage and manager routing from live teams, and team codes on existing orders could change. | Partly answered → master Q-32 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-13** | **P2** | Gap | How is the "deterministic, human-readable team code" derived, and is it stable for life? Does it change on rename, re-homing or division deletion? Is it unique store-wide or platform-wide? | OI-6. p.8: "Each division and team carries a deterministic, human-readable team code (e.g. RT47A)."; p.21: "They must be generated deterministically per division and team, stamped onto orders for container routing and reporting, and exposed read-only"; p.21: "team codes are still generated deterministically at creation" | **A) Generate at creation from store prefix + sequence, unique platform-wide, and immutable afterwards (renames and re-homing don't change it) (recommended). B) Derive from the current names/division and regenerate on change. Not recommended, because codes are already stamped on orders.** | Routing/reporting keys could change under existing orders, or collide. The generation algorithm can't be built without inputs. | Open → master Q-33 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-14** | **P2** | Gap | How does fulfillment mapping work for standalone teams (no division) and for League stores with no divisions? Does the Order Fulfillment strip, and its "Not assigned" gate, apply when fulfillment is Direct to Home Delivery? | OI-9, OI-10. p.8: "Fulfillment mapping: each division routes orders to the league manager, a division manager, or individual team managers."; p.8: "unassigned managers gate pending-order submission"; p.3: "A team sits inside a division or stands alone under the league."; Store Home C-08 trigger is scoped "(League, Ship-to-Manager only)" | **A) Standalone teams route to the league manager by default, with an optional team-manager override. The strip and gate render only when fulfillment is Ship to Team Manager (recommended: matches Home C-08). B) Standalone teams must each have a team manager assigned. C) The strip shows for all fulfillment methods.** | Pending-order submission could be blocked (or not blocked) wrongly, and Home's C-03/C-08 counts may disagree with this tab. | Partly answered → master Q-34 |
| **Q-15** | **P2** | Ambiguous | In the "league manager" fulfillment mode, which manager record receives orders? Is it the store's designated primary record (shown as "Point of Contact" on Home), or a separately selected manager? | OI-9. p.8: "each division routes orders to the league manager, a division manager, or individual team managers"; p.21: "Manager mapping needs per-division fulfillment modes (league / division / individual teams), manager records (name, email, 10-digit phone, address)"; Store Home Epic F: "The designated record is tagged 'Point of Contact'" (see Store Home Q-29) | **A) The league manager is the designated primary record (the Point of Contact), and changing the designation re-routes league-mode divisions (recommended). B) Choose the league manager separately in Settings → Distribution & Fulfillment, independent of the Point of Contact.** | Routing and the "effective manager" shown on the strip are undefined, and Home's Point of Contact and this tab may name different people. | Partly answered → master Q-34 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-16** | **P2** | Gap | Which columns are in the CSV template, and in what format? This includes Associated Emails (delimiter), Player Shipping Address (one column or split; non-Direct-to-Home stores), Jersey Number (leading zeros), and Contact Phone (formatting characters). | OI-12. p.9: 'a "Download CSV template" link — a structured .csv skeleton with headers matching the data model'; p.9: "(prolook_roster_template.csv)"; p.5: Associated Emails "List of valid emails"; p.5: Player Shipping Address "Street, city, state, ZIP" | **A) Columns: First Name, Last Name, Jersey Number (text, keeps "00"), Name on Jersey, Contact Email, Contact Phone (any formatting, normalised to 10 digits), Associated Emails (semicolon-separated); address columns (Street, City, State, ZIP) only in Direct-to-Home stores' template (recommended). B) A single template with all columns everywhere, where address is ignored outside Direct-to-Home.** | The template generator and the parser can't be built. Excel strips leading zeros, so "00" and "07" are lost without a defined format. | Open → master Q-35 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-17** | **P2** | Gap | Does CSV import append to or replace the existing roster? Are duplicate numbers checked against existing roster players and pending captures as well as within the file? When two rows in the file share a number, are both skipped or only the later one? Are duplicate players (same name) detected? What are the maximum file size and row count? | OI-12. p.9: '"Row 4: Duplicate jersey number 8 (also Row 2)"); invalid rows are skipped ("n rows skipped — fix and re-upload") while valid rows import'; p.9: "a duplicate number is a skip-worthy error only on rosters that disallow duplicates"; p.13: "The taken-number set for a roster is the union of its committed player records and the pending captures banked against that team." | **A) Append only. When duplicates are disallowed, check against the existing roster plus pending captures plus earlier rows in the file; the later conflicting row is skipped and the earlier one imports. Same-name rows import, with a non-blocking "possible duplicate player" warning in the preview. Limits: 2 MB / 500 rows per upload (recommended). B) Replace mode: the upload overwrites the roster after a confirmation.** | Import results are non-deterministic, and re-uploading a corrected file may double the roster or skip valid players. | Open → master Q-36 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-18** | **P2** | Gap | Can a player who has team-gear orders be deleted (single or bulk), or removed by Clear Roster? Is single delete really instant with no confirmation or undo, given the metric "Zero accidental clears/deletes (confirmation-gated)"? What happens to that player's order tracking and per-player invite link? | OI-11. p.10: "a single player is removed from the row menu instantly; bulk delete … shows a confirmation modal"; p.19: "Zero accidental clears/deletes (confirmation-gated)"; p.18: Move is refused for players with orders | **A) Allow delete in every case. Single delete is instant with a 5-second Undo toast. Orders keep their snapshot and stay visible in Orders but drop out of Team Gear tracking, and the invite link stops resolving (recommended). B) Single delete also shows a confirmation. C) Block deleting players who have orders, consistent with Move.** | Delete behaviour and the order-tracking side effects are undefined, and Delete is inconsistent with the Move refusal. | Partly answered → master Q-27 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-19** | **P2** | Conflict | What exactly does "update the order" rewrite: only the diverging field, or all personalization (number and Name on Jersey)? Does it cover shipping address? Epic 3 says divergence applies to Player Address "in the same way", but also says nothing writes an address back onto a placed order. If a player has several orders with different checkout addresses, which one writes back? | OI-15. p.11: "update the order to #7 — which rewrites that order line's snapshot to the current roster values"; p.12: "nothing in this tab writes an address back onto a placed order … the divergence treatment in Epic 2 applies to the Player Address column in the same way it applies to personalization."; p.20: "The pending-order update action rewrites one order line's snapshot from the current roster values" | **A) The update rewrites Jersey Number and Name on Jersey only. Address divergence is shown as information only, with no update action. Only the first checkout fills a blank address (recommended). B) The update also rewrites the address on pending orders (amend Epic 3). C) The update rewrites only the field that diverges.** | The server-side update endpoint's scope and the address column's UI are ambiguous. Wrongly rewriting an address could ship a paid order to the wrong home. | Partly answered → master Q-30 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-20** | **P2** | Ambiguous | When the league-level Allow Duplicate Numbers value is changed after rosters have overridden it, does the bulk apply overwrite every roster, including the overrides? Is there a confirmation that shows the number of rosters affected? | OI-17. p.12: "setting it at the league level cascades through every division to every team's roster in the store. Any roster may then override it, and the league-level control never overrides a roster afterward."; p.13: "the Settings control reports a mixed state rather than implying uniformity"; p.21: "implemented as a bulk write cascading through divisions to every roster plus a mixed-state read" | **A) Every change at league level is a bulk write to all rosters, overriding the overrides, after a confirmation ("This will set n rosters, including m that differ, to …"). "Never overrides afterward" means there is no read-time inheritance (recommended). B) The bulk apply only touches rosters that still match the old default.** | The rep's per-roster exceptions may be silently wiped, or the league control may appear not to work. | Partly answered → master Q-78 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-21** | **P2** | Gap | Which duplicate policy governs the storefront number picker (and pending captures) for a team that has no roster yet? What is the default value of the store-level Allow Duplicate Numbers field when the rep doesn't touch it in Step 1? On a Single-Team store, is there a store-level control at all? | OI-17. p.12: "Each roster carries its own Allow Duplicate Numbers setting … A roster's own value is what validation reads — always."; p.13: "New rosters inherit the league-level default at creation"; p.13: "The taken-number set for a roster is the union of its committed player records and the pending captures banked against that team."; p.2: "a team may exist with no roster attached" | **A) For a team with no roster, the storefront reads the current league-level default, and the taken set is that team's pending captures. The store-level default is Off (duplicates not allowed). Single-Team stores show only the roster-level control (recommended). B) Create the roster (with the default policy) as soon as the first capture is banked.** | The storefront PDP and checkout can't resolve the rule for the most common roster-optional case (a team with no roster). | Partly answered → master Q-37 |
| **Q-22** | **P2** | Gap | When is a jersey number reserved for a shopper: on selection at the PDP, on add-to-cart, or only when the order is placed (capture created)? What happens when two shoppers check out the same number at the same time on a roster that disallows duplicates? | p.13: "A number claimed by a capture nobody has committed yet is unavailable — otherwise two buyers could take the same number in the gap between order and commit."; p.13: "The conflict is prevented at selection, not reported at submit."; p.19: "Duplicate-number errors surfaced at submit — target near zero" | **A) The number is held only once the order is placed. A server-side check at checkout rejects the second buyer with "Number X was just taken, pick another", which is an accepted rare exception (recommended). B) A soft hold at add-to-cart with a timeout (e.g. 15 min).** | The race window between PDP selection and order is unhandled, and building holds would need a reservation store and expiry. | Open → master Q-38 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-23** | **P2** | Gap | How does a rep remove a product from a team from this tab? Can a single team opt out of a division-wide ("via division") assignment? | p.15: "products are assigned to a team or a whole division from a docked catalog drawer"; p.16: 'rows sourced from a division-wide assignment marked "via division"'; p.17: Epic 6 covers Click to assign / Drag to assign only, with no unassign described | **A) Direct rows have a Remove action. "Via division" rows can only be removed at the division level, and there's no per-team exclusion in v1 (recommended). B) Add a per-team exclusion from division-wide assignments. C) Unassigning is done only from the Products tab.** | Reps can't correct a wrong assignment where they make it, and the exclusion option changes the assignment data model. | Open → master Q-39 |

| ID | Priority | Type | Question | Source / quoted text | Options / suggested answer | Impact if unanswered | Status (8-spec review) |
|---|---|---|---|---|---|---|---|
| **Q-24** | **P2** | Gap | Is Move to team permitted once the store is Active or Closed? Are moves (and roster edits in general) recorded in the store's activity history? When the destination team has no roster, is one created? After a move, do the player's existing orders and team-gear tracking (and any pending captures banked for them) follow them to the destination team? Is "move without a number" still offered when the destination allows duplicates? | OI-22, OI-23. p.18: "To confirm before build: whether a move is permitted once the store is Active or Closed, and whether moves are recorded in the store's activity history."; p.17: "each player leaves the origin roster and joins the destination roster" | **A) Allowed in Draft and Active, blocked in Closed/Archived. Moves are logged as activity events, and a missing destination roster is created implicitly (see Q-7). Existing orders stay with the origin team for routing, Team Gear tracking follows the player record, and pending captures stay banked against the origin team. When the destination allows duplicates, the number moves as-is with no prompt (recommended). B) Allowed in every state, and not logged.** | Epic 7's state gating and audit requirements are explicitly unresolved "before build". | Partly answered → master Q-27 |

|---|---|---|---|---|---|---|---|
| **Q-25** | **P2** | Gap | What does "genuine team-database integration: roster sync and member/role management" require? Does the roster sync with the external Team Database? If so, in which direction, how often, and which fields? | OI-24. p.20: "Requires genuine team-database integration: roster sync and member/role management."; Store Home Epic F: "coach import from the Team Database" | **A) v1 is a one-way import of teams/players from the Team Database on demand (e.g. "Import from previous season"), with no ongoing sync (recommended). B) Two-way sync on every edit. C) Out of scope for v1, and the sentence refers only to internal persistence.** | An integration of unknown size is in scope. Two-way sync would conflict with the "roster is the rep's working list" model. | Partly answered → master Q-69 |

|---|---|---|---|---|---|---|---|
| **Q-26** | **P2** | Gap | Which scoped deep-link routes does My Team(s) expose for Store Home: a division, a team detail, the store-wide Roster Bank view, a division's Products coverage tab, and the "store-wide player view, filtered to incomplete" that Home C-05 targets? This spec doesn't define a store-wide player view. | OI-25, OI-26. Store Home C-05 Resolves to: "My Team(s) → store-wide player view, filtered to incomplete"; Store Home p.15: "My Team(s) deep links must land scoped, not at the canvas"; Store Home Epic H: "a team opens that team's detail … with the containing division auto-opened and breadcrumbs intact — the existing jump-in behavior"; this spec p.14: "as a store-wide view from the My Team(s) home, showing all pending captures with a team column and filters" (no store-wide player view is specified) | **A) Add to this spec a route registry: division, team (auto-opens the parent division), store-wide Bank, division Products tab, and a new store-wide player list with a "missing required gear" filter. Owner: Roster Management, tracked with Store Home Q-18 (recommended). B) Re-route Home C-05 to the store-wide Bank/team view and drop the player-view requirement.** | Home's C-05/C-06/C-07 cards and the Epic H directory have no target to land on, and the missing store-wide player view is unbudgeted work. | Partly answered → master Q-25 |

|---|---|---|---|---|---|---|---|
| **Q-27** | **P3** | Gap | Please define the branding and naming rules for divisions and teams. Where is a division's "sport" set, and what is it used for? What is the default brand color? Where does the "team avatar" come from? What banner does a standalone team show? Must names be unique (within a division, or store-wide), and what are the length limits? | OI-5. p.3: "Carries branding: name, color, sport."; p.8: "divisions are created with a name and brand color"; p.8: "a branded banner (division color, team avatar)"; p.21: "division brand color still takes its default"; p.3: "Every team must have a name." | **A) Sport is optional and set in the division edit modal. The default color is the store's primary brand color, and the avatar is the team's initials on the division color. Standalone teams use the store brand. Names must be unique within their parent, with a maximum of 50 characters (recommended).** | Create/edit validation and the banner rendering are under-specified. | Open → master Q-70 |
| **Q-28** | **P3** | Ambiguous | Which characters are allowed in First/Last Name and Name on Jersey (accents, apostrophes, hyphens, spaces, digits, emoji)? Is Name on Jersey stored in uppercase, or only displayed in uppercase? | OI-4. p.4: "Name on Jersey Optional String, max 15 characters Converted to UPPERCASE dynamically."; p.4: "First Name Required String, max 50 characters" | **A) Names accept Unicode letters, spaces, apostrophes and hyphens. Name on Jersey accepts A–Z, digits, space, apostrophe, hyphen and period (what the factory can print), and is stored in uppercase (recommended).** | Records may be accepted that the factory can't print, and snapshots/divergence comparisons may differ only by case. | Open → master Q-71 |

|---|---|---|---|---|---|---|---|
| **Q-29** | **P3** | Ambiguous | Are contact phone and shipping address US-only? What should the rep be able to do when map-service verification fails: save the unverified address, or only retry or leave it blank? | OI-4. p.5: Contact Phone "validated to a 10-digit numeric format"; p.5: Address "Street, city, state, ZIP; validated against a map service on the backend"; p.12: "a failed check offers a retry-or-leave-blank error" | **A) US-only for v1. Phone input accepts formatting characters and is normalised to 10 digits. A failed verification allows only retry or blank, with no unverified save (recommended, as written). B) Allow "save anyway" with an "Unverified" badge.** | Validation rules and the error UX are ambiguous, and non-US players would be rejected. | Partly answered → master Q-72 |
| **Q-30** | **P3** | Conflict | Please confirm the vocabulary and the stats header contents. The tab label is "My Team(s)", yet the spec also says "My Teams tab" and "My Team tab"; the store type is called "Single-Team Locker" here but "Individual Team" on Home; and the dependencies use "member". Does the stats header show "divisions · teams · players" plus the pending-capture count, and what does a Single-Team store show? | p.1: "tab renamed My Team(s)"; p.7: "the My Teams tab organizes structure"; p.7: "the My Team tab drops straight into the team's player table"; p.7: "a stats header (divisions · teams · players)"; p.14: "the store-wide stats header, show a pending-capture count alongside the player count"; p.20: "member/role management"; Store Home Q-28 / p.29: "Verify that Roster Management's own stats header says players too" | **A) The label is always "My Team(s)", the store type is "Individual Team (Single-Team Locker)", and roster entries are "players" everywhere. The League stats header reads "n divisions · n teams · n players · n Roster Bank captures", and Single-Team shows "n players · n captures" (recommended). This also answers the "players" half of Store Home Q-28.** | Labels may diverge between Home and the tab, which Home's Governing rule 1 forbids, and the copy freeze for both specs depends on it. | Partly answered → master Q-65 |

|---|---|---|---|---|---|---|---|
| **Q-31** | **P3** | Gap | Who receives Share Roster Template? Is it every manager record in Settings, the team's mapped manager(s), or recipients the rep selects? Does the email name the team the template is for? | p.9: "a standalone flow emails the blank roster template (prolook_roster_template.csv) to team managers … Manager email addresses come from the manager records in Settings" | **A) The rep picks the recipients from the store's manager records, pre-selected with the team's mapped manager, and the email names the target team (recommended). B) Send to all managers.** | The recipient logic for an outbound email is undefined, and a returned template can't be associated with the right team. | Open → master Q-73 |
| **Q-32** | **P3** | Ambiguous | How do pending captures "count toward team-gear completion tracking" when they are not players and not in the player table? Whose completion count do they affect? | OI-18. p.15: "Captures are not players. They do not appear in the player table, are not counted in player counts … but they do hold jersey numbers (Epic 4) and do count toward team-gear completion tracking." | **A) Captures count only in team-level and store-level gear aggregates (e.g. reporting). The per-row "n/m" applies to committed players only (recommended). B) The Bank view shows a per-capture n/m.** | The completion metric and Home C-05 ("committed player record") may disagree about who is missing gear. | Open → master Q-74 |

|---|---|---|---|---|---|---|---|
| **Q-33** | **P3** | Gap | What happens when a capture is committed onto a roster that disallows duplicates and its number is already held by a committed player? This can happen after the policy is switched off, or through a direct-entry/CSV backstop path. | p.15: "A capture commits at the values it was captured with."; p.14: "Existing duplicates are grandfathered."; p.13: "The taken-number set … is the union of its committed player records and the pending captures" | **A) Commit always succeeds and the shared number becomes a grandfathered duplicate (reported, not gated) (recommended: consistent with the permissive rule). B) Block the commit until the rep changes one number.** | The commit path behaviour is undefined for a reachable edge case. | Open → master Q-75 |
| **Q-34** | **P3** | Ambiguous | Define the Epic 6 counts and filters. Does the division count pill show distinct products (the union across teams)? Does the "Unassigned" filter treat a product with only a division-wide assignment as assigned? When "Add New Product" is launched from a team or division, is the new product auto-assigned to that scope? | OI-19. p.15: "the number of products reaching its teams, whether assigned division-wide or team-by-team"; p.16: "Unassigned (products on no team), and Not on [X]"; p.16: "Add New Product (hands off to the existing add-product flow)" | **A) The pill counts distinct products reaching at least one team in the division. Division-wide assignment counts as assigned, and "Not on [X]" includes inherited coverage. Add New Product pre-assigns the new product to the launching scope (recommended).** | Aggregate queries and filter predicates may be built inconsistently with Home C-07. | Open → master Q-76 |

|---|---|---|---|---|---|---|---|
| **Q-35** | **P3** | Conflict | The metric "Roster completeness … vs. estimated true team size" needs a team-size estimate, but Store Home says there is no known true team size. Where does the estimate come from? Should the metric be dropped? | p.19: "Roster completeness at ordering-window close — committed players vs. estimated true team size"; Store Home p.17: "There is no known true team size to compare against, so 'incomplete' is unmeasurable as well as undesirable." | **A) Drop the metric, or replace it with "committed players + captures per team at window close" (recommended). B) Add an optional "expected team size" field on teams (not a gate).** | The metric can't be instrumented, and adding a size field would conflict with Home's decision. | Open → master Q-77 |
| **Q-36** | **P3** | Gap | What are the volume limits (max divisions, teams, players per roster) and the audit expectations for roster edits? What are the performance targets for roster edit → storefront latency, the real-time number-conflict check, taken-number set invalidation, and map-service address verification (including the timeout)? | OI-27. p.19: "Roster edit → storefront latency" (no target); p.4: "real-time conflict checking backstops any direct-entry path"; p.12: 'an inline "Verifying address with map service…" state' | **A) For example: roster edit visible at the storefront within 5 s; taken-set update within 2 s; conflict check p95 ≤300 ms; address verification timeout 10 s, then the retry state. Limits: 50 divisions, 300 teams, 150 players per roster. Destructive and personalization edits go to activity history (recommended: eng/product to confirm).** | No NFRs can be tested, and stale taken-number sets reopen the duplicate race. | Open → master Q-67 |
