Short names: Home, Roster, Product, Launch, Orders, Reports, Settings, Lifecycle

"Was:" lists the original question IDs merged into each row: "Home Q-n" from the Store Home list, "Roster Q-n" from the Roster Management list, "WS Q-n" from the Store Workspace list. Every one of the 111 original IDs appears exactly once, either in Open questions or in Answered by another spec (see Cross-reference).

Questions by spec

A question that spans several specs is listed under each one.

Open questions

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-1	**P1**	Conflict	Appendix A is still missing, and none of its amendments appears in the 8 specs. Where is Appendix A, and who amends each target spec by when? (8e) Settings still marks the designated manager record "primary", and Home must not ship ahead of the rename. Is the rep-facing label "Point of Contact" everywhere? (8b) Settings still has "Add from Team Database" on the manager card as OPEN (decision in master Q-85). (8d) Settings Epic B does not list Team Logo and Team Colors as lock exceptions (decision in master Q-11). (10) The header chip still needs its fix (master Q-61), and Lifecycle still describes a five-tab shell with a Detail tab (master Q-81).	Was: Home Q-1, WS Q-26. Home p.8: "The Tabbed Store Dashboard shell must be amended — see Appendix A."; Home p.31: "Settings must adopt the same term, and Home must not ship ahead of it. Settings currently marks the record primary."; Settings p.7: "with the primary record marked"; Settings p.11: "when the rep designates it primary, then the previous primary is demoted"; Home p.33: "(Appendix A, 8b)"; Settings p.9: "OPEN — to be confirmed: whether this re-fetch should be surfaced on the League/Team Manager Information card as well"; Home p.35: "to be recorded in Settings Epic B's lock list (Appendix A, 8d)"; Home p.42: "The workspace header's chip should be corrected on the same pass (Appendix A, 10)."	**Home, Settings, Lifecycle, Launch**	*Contradicted — Settings p.7, p.11 still say primary; Settings p.9 keeps 8b OPEN; Settings p.15-16 omit Team Logo and Team Colors from the lock exceptions*	A) Supply Appendix A now, with an owner and a date for each amendment. Settings adopts "Point of Contact" as the rep-facing label and keeps "primary" as the internal field name (recommended). B) Keep "primary" in Settings and amend Home. C) Ship Home with interim labels. The Home spec forbids this for Point of Contact.	Home can't ship under its own rule until Settings is amended, and the shell, lock-list and header-chip changes have no owner or date, so the release date can't be committed.
Q-2	**P1**	Conflict	Home says Settings publishes two thresholds that Settings does not define. (1) C-15: Settings confirms only the 7-day urgent pill, so the 14-day C-15 lead has no owning spec. Is C-15 "14 days left AND C-05", with Settings Epic E publishing 14, or "C-14's 7-day trigger AND C-05"? (2) C-24: Settings Epic A2b has no staleness threshold. An invite is amber from the moment it is sent. Is Home's 7 days a value Settings must publish, or should C-24 fire on any invite that is not logged in?	Was: Home Q-3, Home Q-25, WS Q-41. Home p.20 C-15 trigger: "C-14's trigger and C-05's trigger both hold"; Home p.22: "C-14 matches the pill at 7 days. C-15 fires earlier, at 14 days"; Settings p.17: "a 'days left' pill that turns urgent (red) inside the final 7 days"; Home p.24 C-24 trigger: "not logged in beyond a threshold (Store General Settings, Epic A2b)"; Home p.24: "C-24's threshold is 7 days."; Settings p.11: "Status is either Active (green dot, with Last login when known) or Invited · not logged in (amber dot)."	**Home, Settings**	*Contradicted — Settings p.17 defines only the 7-day urgent pill; Settings p.11 shows the amber dot for every not-logged-in invite, with no threshold*	A) Settings Epic E publishes a 14-day closing-soon lead and Epic A2b publishes a 7-day invite-staleness value. Home reads both (recommended). B) C-15 uses C-14's 7-day trigger, and C-24 fires on any invite not yet activated. No new constants. C) Home owns both constants. This breaks Home's "no second computation" rule.	One of two incompatible C-15 triggers gets built, and C-24 either has no owning value or disagrees with the amber dot in Settings.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-3	**P1**	Conflict	Lifecycle settles one part: the ordering window "Runs as configured" while Open and is "Suspended" while Closed, and a Draft store has no orders. So C-14 (and C-15) can hold on Open but not on Closed, and Home p.25 lists C-14 in the wrong row. Still open: please give an explicit condition × store-state (and store-type) matrix. Is the count 24 or 25? Can C-07, C-21 to C-24 and C-27 hold on Draft stores? What does "Most of the catalogue" exclude on Closed stores?	Was: Home Q-4. Home p.25: "What differs is which of the 24 registered conditions can hold."; Home p.25 Open row, cards that cannot hold: "C-14 (no live window to be closing)"; Home p.20 C-14 trigger: "Store is Open, has a set window"; Home p.25 Closed row: "Most of the catalogue"; Lifecycle p.3-4 ordering window: "Runs as configured" (Open), "Suspended — does not advance" (Closed); Lifecycle p.3 existing orders on Draft: "None — store has never been open"	**Home, Lifecycle**	*Partly answered — Lifecycle p.3-4 settles that the ordering window runs only while Open*	A) Add a full matrix of C-01 to C-24 and C-27 by Draft/Open/Closed/Archived and by League/Individual and Set window/Always open. Move C-14 and C-15 to Closed's "cannot hold" list (recommended). B) Correct only the C-14 placement and the count.	Gating lives in the resolver. As written, C-14 would never render on Open stores, Draft stores could miss real cards (such as C-07 or C-24), and Closed-store behaviour is guesswork.
Q-4	**P1**	Gap	Which surfaces and write types emit a resume event? For each one, what are the surface key, entity type, field-group/operation identifier and label template?	Was: Home Q-5. Home p.48: "The write path must be explicitly opt-in per surface, not a blanket hook on every mutation"; Home p.27: "'Home Jersey — pricing' is rendered from a product reference plus a field group at read time"; Home p.27 qualifies: "A write against a resumable surface — one with a stable deep link"	**Home**	*Open*	A) Provide a registry table (surface, write type, entity, field group/operation, label template, deep-link key) covering at least My Team(s), Products and Settings (recommended). B) Start with a minimum set (product pricing/details, roster edits, CSV import, division/team edits, Settings sections) and grow it.	The resume trail (Epic D) and the only new database record can't be built or tested, and acceptance criteria for "qualifying write" can't be verified.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-5	**P1**	Gap	What is the role model, and the permission matrix, for users who are not the owning rep? Settings settles the portal half of Home Q-8: a portal invitee gets only Reporting and Rosters, so the Team Manager Portal gets no Home-equivalent area. Still open: (1) Is the "team-manager-role user" who enters the workspace in Lifecycle the same person as a portal invitee, and does that user see Home? (2) Does "manager-role users" in Settings Epic C mean co-managing reps or a separate workspace role? (3) For each role (owner rep, co-managing rep, salesperson, team manager, league director), which actions can they take in My Team(s), Products, Orders (view, submit pending, Epic E update), Reports and Settings? (4) Is a team manager limited to their own mapped team(s) in Rosters?	Was: Home Q-8, Roster Q-6, WS Q-20. Settings p.10: "exactly two areas — Reporting and Rosters (no products, orders, settings, or vault) — scoped to this store only"; Home p.6: "OPEN — to be confirmed … whether the Team Manager Portal gains an equivalent surface … Confirm before build."; Roster p.2: "store managers (reps, team managers, league directors) build and manage team structure, and populate rosters"; Lifecycle p.9: "A rep and an invited team-manager-role user each see the auto-trigger once"; Settings p.16: "(hidden for manager-role users)"; Orders p.2: "The store manager (rep) viewing and managing all orders"	**Home, Roster, Orders, Reports, Settings, Lifecycle**	*Partly answered — Settings p.10 settles that the portal has exactly two areas, Reporting and Rosters, so there is no portal Home in v1*	A) Two roles. A rep (owner or co-managing, including league directors) has the full workspace, including Home. A team-manager invitee has the portal only: Reporting (scoped KPIs and the manager Close Report variant, no Fundraising PDF) and Rosters (player edits, CSV import and share links for their mapped team(s) only, with no structure, policy, product or Bank actions). "Manager-role" in Settings means co-managing reps (recommended). B) Supply a full role × action matrix covering all 8 specs.	Authorization can't be built consistently across six specs. Team managers could see orders or dealer figures, or edit other teams' rosters and product pricing.
Q-6	**P1**	Conflict	Settings says that in "Players choose their own numbers" mode the roster "fills in as orders arrive", which answers yes for the jersey number. But Roster p.12 calls address write-back "the one order → roster path", and Orders p.2 names only address write-back and Roster Bank capture. Still open: (1) Does Name on Jersey also fill from checkout? (2) Does checkout fill only a blank roster field, or can it overwrite one? (3) In "Team manager chooses" mode, does anything other than the address write back? (4) Is a blank roster value next to an ordered value shown as a divergence?	Was: Roster Q-1, WS Q-2. Settings p.18: "Players choose their own numbers (buyers enter a number on the product page and the roster fills in as orders arrive)"; Roster p.5: "it writes back onto the roster (same pattern as Name on Jersey)"; Roster p.12: "Write-back is the one order → roster path, and it is not reversible."; Orders p.2: "Checkout writing a shipping address onto a player record (Roster Management, Epic 3) and a team-gear order creating a Roster Bank capture both run in the opposite direction."	**Roster, Settings, Orders**	*Partly answered — Settings p.18 settles that in Players-choose mode the roster number fills in from orders*	A) In Players-choose mode, Jersey Number and Name on Jersey fill a blank roster field only (badged "From checkout") and never overwrite one. In Team-manager-chooses mode only the address writes back. Roster Epic 3 and the Orders governing rule name this as a third path, and a blank roster value is not a divergence (recommended). B) Only the address writes back, and Settings copy is corrected. C) Write-back overwrites existing roster values.	The checkout → roster data contract and the divergence comparison can't be built, and three specs ship different rules. Choosing wrongly overwrites rep data or shows false divergences.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-7	**P1**	Gap	What happens to placed orders, shipping containers, pending Roster Bank captures and fulfillment mapping when a team that has orders is deleted? Is deleting a team (or a division whose teams have orders) blocked, warned or permitted?	Was: Roster Q-2. Roster p.8: "teams can be added to a division or standalone, renamed, and deleted with confirmation"; Roster p.10: "Deleting a team is a separate action in Epic 0 and removes the team along with any roster it holds."; Roster p.20: "team deletion must remove the team from shared state, which product assignment and shipping containers consume. Neither clear nor delete may destroy pending Roster Bank captures"; Roster p.3: Team is "The unit everything else keys off: product assignment, shipping containers, fulfillment mapping, and the team code."	**Roster**	*Open*	A) Block deletion of a team that has any placed order or pending capture, give the reason, and offer Archive/hide instead (recommended). B) Soft-delete: hide the team in the workspace but keep its code, container and captures for routing; captures move to an "unassigned" Bank bucket. C) Hard delete after a confirmation that lists the affected orders and captures.	Paid orders could lose their routing (container and team code) and pending captures could be orphaned. Data integrity for live orders is at stake.
Q-8	**P1**	Gap	How does the platform decide that a storefront order "matches" an existing player record? This decides whether the order writes back to that record or creates a Roster Bank capture. When a matched record already has an address, does checkout overwrite it or leave it alone?	Was: Roster Q-3. Roster p.12: "write-back completes a record that already exists. Where no matching player record exists, the order does not write back — it creates a Roster Bank capture instead (Epic 5). These are the two directions of the same plumbing and must not both fire for one order."; Roster p.10: "the row menu copies a per-player store invite link"	**Roster**	*Open*	A) A match exists only when the shopper arrived through that player's per-player invite link (or picked their own name from the team's roster at the storefront). Otherwise the order creates a capture. A non-blank roster address is never overwritten (recommended: deterministic, no fuzzy matching). B) Also match on contact email, or on first + last name within the selected team. C) Defer to the Roster-Optional Architecture spec, Epic C. Please name the exact rule.	The "must not both fire" rule can't be implemented or tested. Mis-matching writes one family's address onto another player's record, or creates duplicate captures for players already on the roster.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-9	**P1**	Conflict	Is a division-wide product assignment a stored rule that new teams inherit automatically, or a fan-out to the existing teams at drop time? Epic 6 says it has been decided, but Dependencies says it is still open.	Was: Roster Q-4. Roster p.17 Epic 6: "A product assigned to a division applies to every team in that division, including teams added to the division after the assignment was made. No re-assignment step is required when a team is added"; Roster p.21 Dependencies: "the inheritance rule for teams added to a division after a division-wide assignment is open (see Epic 6) and determines whether division scope is a stored rule or a drop-time fan-out."	**Roster**	*Open*	A) A stored division-scope rule, resolved at read time, so new teams inherit and rows show "via division". Remove the "open" sentence from Dependencies (recommended, as Epic 6 states). B) A drop-time fan-out to the current teams only, where new teams get nothing, and Epic 6 is amended.	The assignment data model (stored scope vs per-team rows), the "via division" rendering, Home C-07 and the Products tab join all depend on this. Building the wrong model means a migration.
Q-10	**P1**	Gap	What happens to pending (unsubmitted) orders when a store is Closed or Archived? Can the rep still submit pending orders to the factory from a Closed store? On archive the workspace becomes read-only: are pending orders auto-submitted, is archive blocked, or are the orders cancelled or frozen?	Was: WS Q-3. Lifecycle p.6: "Given the store is Closed and orders are in-flight, then those orders continue to process normally — no automatic cancellation or hold is applied."; Lifecycle p.7: "settings, products, roster, and orders are all visible but no field or action is editable"; Orders p.3: "orders that have been placed in the storefront but not yet approved by the rep and sent to the factory"; Lifecycle p.10: "Pending Orders count and any below-MOQ containers still open at close"	**Orders, Lifecycle**	*Open*	A) Closed: Pending Orders submission stays available. Archive: blocked while any order is pending, and the modal lists them (recommended). B) Archive auto-submits all pending orders, including any below-MOQ fees. C) Archive cancels and refunds pending orders.	Paid orders could be stranded and never reach the factory, and archive behaviour is undefined for money already collected.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-11	**P1**	Gap	Which Settings fields lock once a store is launched? Settled so far: Settings excludes five things from the lock (Store Point of Contact, ship-to destination, Team Fundraising, the manager collection, and both Store Customization & Design controls), and Home p.35 says Team Logo and Team Colors don't lock either, which Settings must record. Still open: re-binding to a different team after launch; switching the fulfillment method; switching Set window / Always open; changing Jersey Number Selection mode once orders exist; and whether the lock applies while Closed, which Lifecycle and Settings Epic D call "fully editable".	Was: WS Q-4. Settings p.15: "OPEN — to be determined: the exact fields/inputs that lock after launch are TBD and must be defined before build"; Settings p.16: "Whether re-binding the store to a different team should be permitted after launch is part of the TBD lock list"; Settings p.16: "Store Customization & Design is the fifth exception"; Home p.35: "Team Logo and Team Colors do not lock after launch either — decided, and to be recorded in Settings Epic B's lock list (Appendix A, 8d)"; Settings p.18: "Selecting a mode saves immediately"; Lifecycle p.6: "all content remains fully editable"	**Settings, Lifecycle, Home**	*Partly answered — Settings p.15-16 settle five exceptions; Home p.35 settles that Team Logo and Team Colors don't lock (not yet in Settings)*	A) Lock after launch (while Open and Closed): Store Type, web address, fulfillment method, tax settings, Set window / Always open, Jersey Number Selection mode, and team re-bind. Logo and Colors stay editable, as do the five decided exceptions (recommended). B) Lock only while Open, and unlock everything while Closed. C) Provide a field-by-field table.	The store-state permission layer can't be built. Live orders can be disrupted, for example by switching from Ship to Team Manager to Direct-to-Home mid-window.
Q-12	**P1**	Conflict	Settings settles that "pop-up" means Set window mode (always-on stores show an "Always open" pill). Still open: how do per-team-code order windows and League repeating close dates relate to the single store-level status? When one team code's window ends, or a weekly close date arrives, does the whole store go Closed? If so, what re-opens it for the next period, given that Lifecycle allows only a manual re-open? Which "Active Order Window" does each Close Report cover?	Was: WS Q-5. Settings p.17: "pop-up stores with a set window get the full progress treatment, while always-on stores show an 'Always open' pill"; Settings p.17: "schedule at store level or per team code — a searchable, status-sorted table of team codes with start/end/timezone per row"; Settings p.18: "League stores can turn the single window into a repeating close cadence — Weekly, Every 2 weeks, Monthly, or End of season"; Lifecycle p.2: "Manual only — rep clicks Re-open Store"; Lifecycle p.6: "Given a pop-up store with a configured close date/time, when that moment is reached, then the store automatically transitions to Closed"	**Settings, Lifecycle**	*Partly answered — Settings p.17 settles that a pop-up store is a store in Set window mode*	A) Store status follows only the store-level window. Per-team-code windows gate ordering per team without changing store status. Each repeating close is a close event that auto-re-opens at the next period start, which is a new system transition that Lifecycle must add (recommended). B) The store auto-closes at the last team-code close date, and each cadence close needs a manual re-open. C) Remove repeating close dates from v1.	The status state machine, the auto-close job and Close Report scoping are all undefined for League stores.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-13	**P1**	Conflict	Settings Epic H and Lifecycle disagree on the Store Close Report. Which spec is authoritative on these points? (1) Team managers: a separate scoped variant (Settings), or full parity including exports and the full order table (Lifecycle)? (2) Seen-state: per rep (Settings) or per user (Lifecycle, and Home p.10)? (3) Blocking: does the report gate nothing, or must it be dismissed "before any other workspace content is actionable"? (4) Tone: "celebratory retrospective", or restrained? (5) Settings' OPEN items: the metric set (it still lists "profit"), and whether the manager version is emailed. Note that the portal excludes orders, yet Lifecycle's detail layer is a full order table and its trigger is "workspace entry".	Was: WS Q-6. Settings p.19: "a separate variant is generated for team managers … It excludes dealer profit and any figure outside that manager's scope."; Lifecycle p.11: "Team-manager role: full parity with the rep for this report"; Settings p.26: "a seen/dismissed flag per rep"; Lifecycle p.9: "Seen state is per user."; Home p.10: "the Close Report's remains per user per close event"; Settings p.19: "It gates nothing and blocks no action."; Lifecycle p.11: "before any other workspace content is actionable"; Settings p.19: "a high-summary, celebratory retrospective"; Lifecycle p.11: "Celebratory framing is suppressed wherever the data does not support it."; Lifecycle p.8: "This section defines the behavioral contract for the report."; Settings p.10: "Reporting and Rosters (no products, orders, settings, or vault)"	**Settings, Lifecycle, Home**	*Open*	A) Lifecycle is authoritative for the rep version, for seen-state (per user per close event) and for blocking. Team managers get a scoped variant in the portal's Reporting area: no order-level detail, no dealer figures, auto-presented on their first portal entry, not emailed (recommended). Settings Epic H is then rewritten to reference Lifecycle. B) Full parity for team managers (Lifecycle), with portal scope widened to include orders.	Two incompatible report builds and permission models, with a risk of data exposure: team managers seeing dealer figures or buyer order data.
Q-14	**P2**	Conflict	Lifecycle settles how the Close Report's seen flag behaves: it is per user per close event, the modal appears "before any other workspace content is actionable", and any dismissal marks it seen. So C-17 ("this user has not seen the report") can never hold once the user is in the workspace, and the card never renders. Should C-17 be removed, or redefined (for example, "seen, but the detail layer was never opened")? If it stays, may Home read the flag, which Home p.10 and p.49 forbid?	Was: Home Q-2. Home p.10: "Home reads neither flag and writes neither."; Home p.21 C-17 trigger: "Store is Closed and this user has not seen the report for this close event"; Lifecycle p.11: "the Store Close Report is presented as a prominent full-screen modal before any other workspace content is actionable"; Lifecycle p.9: "Any dismissal marks the report as seen for that user."	**Home, Lifecycle**	*Partly answered — Lifecycle p.9, p.11 settle the seen flag: per user per close event, shown before anything else is actionable, and any dismissal marks it seen*	A) Remove C-17. The auto-present plus Home's existing Close Report route (Home p.10) cover it (recommended). B) Redefine C-17 as "seen, but the detail layer was never opened", let Home read the flag read-only, and amend Home p.10 and p.49.	A card is built and tested that can never render, or the resolver breaks a stated Home constraint.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-15	**P2**	Conflict	Must every card carry an action? The Informational tier allows "action is a link or is absent", but Presentation says every card has exactly one primary action. Does a link count as the primary action, and can an Informational card have none?	Was: Home Q-6. Home p.4 tier table, Informational: "Neutral rail; action is a link or is absent"; Home p.25: "Every card carries exactly one primary action."	**Home**	*Open*	A) Every card has exactly one action. For Informational cards it is rendered as a link (recommended, and consistent with the Epic I buttons for C-14 and C-17 to C-20). B) Informational cards may have no action; amend p.25.	Card component variants and AC tests differ, and the treatment for C-18, which says "nothing needed from you", is unclear.
Q-16	**P2**	Conflict	Is C-24 Action tier (blue) or Informational tier (neutral)?	Was: Home Q-7. Home p.5: "C-07 and C-24 are therefore blue on Home and amber on arrival."; Home p.23 catalogue C-24 tier: "Informational"; Home p.4: Action = "Blue rail", Informational = "Neutral rail"	**Home**	*Open*	A) Action (blue), and correct the catalogue. B) Informational (neutral), and correct p.5 (recommended, because unactivated invites aren't blocking anyone and C-23 is also Informational).	Rail colour, ordering and the tab dot for C-24 are contradictory.
Q-17	**P2**	Ambiguous	Do Action-tier conditions put a dot on the tab label, or only Blocking-tier ones? And which tab gets the dot for conditions that route to the workspace header (C-16) or to Reports (C-17)?	Was: Home Q-9. Home p.9: "Blocking-tier conditions produce the dot; Informational-tier conditions do not."; Home p.48: "Tab-label indicators need the resolver's per-tab roll-up, restricted to Blocking-tier conditions"	**Home**	*Open*	A) Blocking only, per p.48; header-routed conditions produce no dot (recommended). B) Blocking and Action.	Nav-badge logic and the per-tab roll-up query differ, and there's a risk that dots become noisy or that queued work is missed.
Q-18	**P2**	Conflict	When more than one shipping group is below MOQ, what does the single C-02 card say and where does it route?	Was: Home Q-10. Home p.11 C-02 trigger: "≥1 pending group below its minimum-quantity threshold"; Resolves to: "Orders → Pending Orders, scrolled to that group"; Home p.38 headline: "Division 3 is under the minimum to ship"; Home p.24: "One card per condition, not per record."	**Home**	*Open*	A) One card: "n groups are under the minimum to ship". Route to Pending Orders scrolled to the first group, or unscrolled if there are several (recommended). B) Name the groups, as C-03 does ("Division 3 and Division 7…").	Copy and the deep link are undefined for the common multi-group case.
Q-19	**P2**	Ambiguous	When C-03 suppresses C-08 for a division, should C-08's count and names exclude that division (with the card removed only if nothing is left), or should C-08 be hidden entirely?	Was: Home Q-12. Home p.15: "Where both are present for the same division, C-03 suppresses C-08 for that division"; Home p.39 C-08 headline: "n divisions or teams have no manager assigned"; Home p.24: "One card per condition, not per record."	**Home**	*Open*	A) Subtract the suppressed divisions from C-08's count, and hide C-08 only when the remainder is zero (recommended). B) Hide C-08 whenever C-03 holds.	The suppression rule could make C-08's count disagree with Settings, or hide unassigned divisions that have no orders yet.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-20	**P2**	Gap	Within a tier, what is the fixed cost-of-delay rank for each condition?	Was: Home Q-13. Home p.24: "Within a tier, order by cost of delay, defined as a fixed per-condition rank recorded in the catalogue above, not by recency and not by count." The C1 to C5 tables have no rank column.	**Home**	*Open*	A) Add a Rank column to the catalogue (owner: product) (recommended). B) Use catalogue ID order within each tier as the interim rank.	Deterministic ordering (an AC on p.42) can't be implemented, and the top-5 cap decides which cards are visible.
Q-21	**P2**	Conflict	What is C-05's "oldest age" based on, and where does it appear, given that its Epic I detail line has no age?	Was: Home Q-14. Home p.25: "'Oldest placed 3 days ago' is required on C-01, C-05, and C-06"; Home p.38 C-05 detail line: "Window closes date — n of them have no email or phone, so a reminder won't reach them"	**Home**	*Open*	A) Drop the age requirement for C-05 and keep the window-close date. On always-on stores (no window) show only the contact caveat (recommended). B) Define the age basis (for example, oldest player commit date) and add it to the detail line.	The resolver contract needs an "oldest-affected timestamp" for C-05 that has no source, and the copy conflicts with the rule.
Q-22	**P2**	Ambiguous	Is the resume collapse key "surface + entity" or "surface + entity + field group"? If a rep edits pricing and then images on the same product, how many rows appear, and which label is shown?	Was: Home Q-15. Home p.28: "Collapse by surface + entity, keeping the most recent."; Home p.27: "'Home Jersey — pricing' is rendered from a product reference plus a field group"; Home p.48 record carries "field-group or operation identifier"	**Home**	*Open*	A) Collapse on surface + entity; the label uses the most recent event's field group (recommended). B) Collapse on surface + entity + field group, so one product can produce several rows.	The read-side query and the visible trail differ, which affects the 5/15-row budget.
Q-23	**P2**	Gap	What copy should be used for the texts Epic I doesn't specify: resume rows, the empty attention state, the Archived state, the "n more" expander, the Point of Contact footer statement, and the "no portal access" disclosure in the manager modal?	Was: Home Q-16. Home p.29: "Copy is specified in Epic I." (Epic I pp.36-42 has no resume-row copy); Home p.25: empty state "states plainly that nothing needs the rep right now and names the store's current lifecycle state"; Home p.32: modal "states that adding a manager creates a contact record only and does not grant portal access"	**Home**	*Open*	A) Product/UX writes the strings and adds them to Epic I before build (recommended). B) Dev uses placeholders, and copy is reviewed before release.	The UI text and copy ACs (banned terms, vocabulary) can't be implemented or checked.
Q-24	**P2**	Conflict	How are the success metrics collected without persisting new state? Several need condition first-held timestamps and per-session resolution, but Home "persists nothing" and the database change is "limited to the resume-event record".	Was: Home Q-17. Home p.45: "Share of Epic C conditions resolved within one session of first being surfaced"; "Time from a Blocking condition first holding to its resolution, before and after Home"; Home p.3: "Home persists nothing about the store."; Home p.49: "Database updates limited to the resume-event record."	**Home**	*Open*	A) Emit analytics events (card rendered/clicked/cleared) to the existing telemetry pipeline, not the store database, and agree a pre-launch baseline (recommended). B) Drop the metrics that need condition history.	Instrumentation will either be missing at launch or will break the no-new-state rule, and the before/after baseline can't be recovered afterwards.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-25	**P2**	Gap	Which owning-tab filters and scoped routes exist, and who builds the missing ones? Two are now specified: Settings p.13 has My Team(s) jump-ins land in Distribution & Fulfillment with the right division auto-opened, and Settings p.15 needs a Products tab view filtered to items still collecting fundraising, which is the filter C-23 needs. Still undefined: My Team(s) has no store-wide player view for C-05's "filtered to incomplete" route, and no route registry (division, team with parent division auto-opened, store-wide Bank, division Products coverage). The C-10 render-pending filter and the C-15, C-20 and C-27 filtered views have no owner.	Was: Home Q-18, Roster Q-26. Home p.48: "Where a route needs a filter Home cannot express — C-05's incomplete-player view, C-10's render-pending filter, C-23's exempted-item filter — that filter must be added to the owning tab"; Home C-05 resolves to: "My Team(s) → store-wide player view, filtered to incomplete"; Roster p.14: "as a store-wide view from the My Team(s) home, showing all pending captures with a team column and filters"; Settings p.13: "jump-ins from the My Team(s) tab land on Settings → Distribution & Fulfillment with the right division auto-opened"; Settings p.15: "Link into the Products tab filtered to those items"	**Home, Roster, Settings**	*Partly answered — Settings p.13 settles the division auto-open route into Distribution & Fulfillment; Settings p.15 also requires the Products filter for items still collecting*	A) Run the audit now. Roster Management adds a route registry and a store-wide player list with a "missing required gear" filter. Products Tab adds the render-pending and still-collecting filters. Each gets an owner and a date (recommended). B) For v1, route unfiltered to the owning tab. C) Hold the affected conditions until their filter lands.	This is hidden scope in other teams' specs. Home's "scoped or filtered" AC (Home p.42) fails for these cards, and the store-wide player view is unbudgeted work.
Q-26	**P2**	Ambiguous	Is C-27 in the v1 scope, given that it depends on a Products Tab amendment that must land first?	Was: Home Q-19. Home p.48: "C-27 depends on an amendment to Products Tab that must land first … must not ship ahead of that amendment"	**Home**	*Open*	A) Register C-27 but feature-flag it off until the Products amendment ships (recommended). B) Remove it from v1. C) Block Home's release on the amendment.	Release sequencing, and whether C-27 is in the condition count and ACs, are undecided.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-27	**P2**	Conflict	Orders settles the main conflict in favour of permitting: moving or deleting a player "leaves every existing order line exactly as it was", and "Roster Management deliberately blocks nothing". Lifecycle settles that the workspace (roster included) is fully editable while Open and Closed and read-only when Archived. Please confirm that Roster p.18's refusal is removed. Still open: (1) Which pending container holds a moved player's unsubmitted order, given the snapshot lists no team or team code? (2) For a deleted player, where does their order tracking appear, and is there any Epic E update path? (3) Is single delete really instant with no confirmation or undo? (4) Are moves and deletes recorded in activity history? (5) If the destination team has no roster, is one created (master Q-28), and do the player's pending captures follow them?	Was: Roster Q-5, Roster Q-18, Roster Q-24, WS Q-1. Orders p.2: "Editing a player's number, renaming them, moving them to another team, deleting them, or clearing the roster entirely leaves every existing order line exactly as it was."; Orders p.2: "Roster Management deliberately blocks nothing"; Roster p.18: "Given a player with one or more team-gear orders, when a move is attempted, then the move is refused"; Roster p.18: "To confirm before build: whether a move is permitted once the store is Active or Closed, and whether moves are recorded in the store's activity history."; Roster p.10: "a single player is removed from the row menu instantly"; Lifecycle p.3 management workspace: "Fully editable — changes go live on re-open" (Closed), "Read-only — all records viewable, nothing editable" (Archived); Orders p.1: "Jersey number, name on jersey, size, and — on Direct-to-Home stores — the shipping address are written onto the line"	**Roster, Orders, Lifecycle**	*Partly answered — Orders p.2 settles that move and delete never touch placed orders; Lifecycle p.3 settles that the workspace is editable while Open and Closed*	A) Permit move and delete in Draft, Open and Closed, and block both in Archived. A pending order stays in the container of the team it was placed under. A deleted player's lines stay in Orders with no divergence or update action. Single delete gets a 5-second Undo toast. Moves and deletes are logged. A missing destination roster is created implicitly, and pending captures stay with the origin team (recommended). B) Keep the refusal and amend the Orders governing rule. C) Permit moves and re-route pending lines to the destination container.	Roster and Orders ship contradictory rules for the same action, and MOQ containers, freight routing and per-player tracking for moved or deleted players are undefined.
Q-28	**P2**	Gap	How is a roster entity created, and what is its name? Is there an explicit "Create roster" action, or is a roster created implicitly by the first manual add, CSV upload, inbound player move or capture commit? Where does the name in the toast 'Roster "name" deleted' come from? On a Single-Team store, does the one team always have a roster?	Was: Roster Q-7. Roster p.3: "Optional — a team may have no roster. Once created, a roster is attached to exactly one team, and one team holds at most one roster."; Roster p.15: "If the team has no roster yet, committing the first capture creates one."; Roster p.10: 'a success toast confirms ("Roster "name" deleted")'; Roster p.10: "Not offered on a Single-Team store's only roster — use Clear Roster there."; Roster p.7: "the My Team tab drops straight into the team's player table"	**Roster**	*Open*	A) A roster is created implicitly by the first player added through any path (add row, CSV, move-in, capture commit). It has no separate name, and the toast uses the team name. Single-Team stores get their roster at store creation, and it can't be deleted (recommended). B) Explicit "Create roster" button with a roster name field.	The data model (roster name field), the empty-team UI, the Move/CSV paths for teams with no roster, and the Single-Team landing state are all undefined.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-29	**P2**	Ambiguous	Is Jersey Number stored as an integer or as a 2-character string? Are "0" and "00" different numbers? Is "7" the same as "07"? Is the "roster's full number range" always 00–99, or can it be configured per roster? Is the add row/edit drawer a typed 2-digit input, a grid picker, or both?	Was: Roster Q-9. Roster p.4: "Jersey Number Optional Integer, 00–99 … 2-digit numeric input."; Roster p.13: "Number entry presents the roster's full number range as a grid with taken numbers greyed out"; Roster p.22: "jersey integer 00–99"	**Roster**	*Open*	A) Store a string of 1–2 digits. "0" and "00" are distinct, while "7" and "07" are the same and normalised to "7". The range is fixed at 0–99 plus 00 (101 values) for every roster (recommended: matches how jerseys are printed). B) Integer 0–99 only, with no "00" (100 values). C) The range is configurable per roster. For entry, the add row and drawer open the grid and also accept typed digits, with the inline error as the backstop for typed entry (recommended).	The schema type, the uniqueness check, the picker grid size and the CSV parsing all depend on this. An integer column makes "00" unrepresentable.
Q-30	**P2**	Conflict	Orders settles what an order line snapshots: jersey number, name on jersey, size, and (Direct-to-Home only) shipping address. It also settles that the Epic E update rewrites one line "from the player's current roster values" and never changes the price. Still open: (1) Is Size a roster field? The Roster schema has none, yet Roster p.1 and p.20 treat size as roster data. (2) Does the update rewrite size and address, or only number and Name on Jersey? Size can change price (for example, a 2XL upcharge), and Roster Epic 3 says nothing writes an address onto a placed order. (3) Is address divergence information only? (4) If a player has several orders with different checkout addresses, which one fills a blank roster address?	Was: Roster Q-10, Roster Q-19, WS Q-13. Orders p.1: "Jersey number, name on jersey, size, and — on Direct-to-Home stores — the shipping address are written onto the line when the order is placed"; Orders p.5: "that single order line's snapshot is rewritten from the player's current roster values"; Orders p.5: "Personalization carries no price, so an update never alters the line total"; Roster p.20: "jersey number, name on jersey, size, and shipping address are copied onto the order line at purchase"; Roster p.1: "names, numbers, emails, sizes, addresses"; Roster p.12: "nothing in this tab writes an address back onto a placed order"	**Roster, Orders**	*Partly answered — Orders p.1 settles the snapshot fields; Orders p.5 settles that the update is per line and price-neutral*	A) Size is chosen per order and is not a roster field. The update rewrites Jersey Number and Name on Jersey only. Address divergence is information only, and only the first checkout fills a blank roster address (recommended). B) Add Size to the roster schema and CSV template, and include size and address in the update, with size confirmed price-neutral.	The update endpoint could silently change the price or shipping of a paid order, and the roster schema, CSV template and divergence scope stay uncertain.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-31	**P2**	Ambiguous	What counts as a "contact channel" for sending? Can Send Reminder and Share Team Store Link be sent by SMS to a phone-only player, or are they email only? Does a player with Associated Emails but no Contact Email count as reachable?	Was: Roster Q-11. Roster p.6: "A record carrying neither an email nor a phone number … Share Team Store Link offers copy-only (no send) for that player, and Send Reminder is disabled with a reason."; Roster p.10: "Players with no email contribute no recipient and are listed as copy-only in the modal"; Roster p.22: "Sharing requires an email channel for the roster template and store-link sends"	**Roster**	*Open*	A) Email only, for both share and reminders. A phone-only player is copy-only for share and reminder is disabled; Associated Emails count as a channel. Correct p.6 to say "no email" (recommended, since only email sending is specified). B) SMS is supported. Specify the provider, consent and opt-out handling.	The enable/disable logic and reason copy for two actions, the recipient pools and the "contact channel" metric are inconsistent; SMS would also need a provider and compliance work.
Q-32	**P2**	Gap	Settings settles one part: when a division is deleted, its announcement message and applied color drop and its teams "resolve to store level". Still open: what happens to the team's division-scoped product assignments, fulfillment mapping and team code when it leaves its division? Can a team be moved between divisions at all?	Was: Roster Q-12. Settings p.21: "Deleting a division drops its customization."; Roster p.8: "Deleting a division keeps its teams — they become standalone teams, dropping the division's branding, and each keeps its roster and players intact."; Roster p.21: "They must be generated deterministically per division and team, stamped onto orders"; Roster p.8: "each division routes orders to the league manager, a division manager, or individual team managers"	**Roster, Settings**	*Partly answered — Settings p.21 settles that a deleted division's announcement message and applied color drop*	A) Teams can't be moved between divisions in v1. On division delete, teams lose "via division" products (with a warning listing the products lost), fall back to league-manager mapping, and keep their existing team code (recommended). B) Convert inherited assignments into direct assignments so coverage isn't lost. C) Support moving a team between divisions with the same rules.	Deleting a division could silently strip product coverage and manager routing from live teams, and team codes on existing orders could change.
Q-33	**P2**	Gap	How is the team code derived, is it stable for life, and what does it key? Roster calls it a deterministic, human-readable code per division and team. Orders shows it on container headers, the Settings scheduler is keyed per team code, and Orders, Settings and Reports name the hierarchy differently ("roster group / standalone roster", "division / standalone team"). Does the code change on rename, re-homing or division deletion? Is it unique store-wide or platform-wide? Are containers and mappings keyed by division/team ID or by team code? Is a roster group the same as a division?	Was: Roster Q-13, WS Q-37. Roster p.8: "Each division and team carries a deterministic, human-readable team code (e.g. RT47A)."; Roster p.21: "stamped onto orders for container routing and reporting, and exposed read-only"; Orders p.3: "League stores render one container per roster group plus one per standalone roster"; Orders p.3: "Each container header shows the team code and rosters"; Settings p.18: "This scheduler is keyed per team code."; Reports p.2: "filterable by team or division"	**Roster, Orders, Settings, Reports**	*Open*	A) Generate the code at creation from a store prefix plus a sequence, unique platform-wide and immutable. Roster group = division and standalone roster = standalone team. Containers, mapping and reports key on division/team IDs, and the code is a stable label (recommended). B) Derive the code from current names and regenerate it on change. Not recommended, because codes are already stamped on orders.	Routing and reporting keys could change under existing orders or collide, and container, mapping and scheduler joins could use different keys.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-34	**P2**	Conflict	Settings settles two parts: the Order Fulfillment Mapping and its gate apply only to League stores shipping to team managers, so Direct-to-Home has no manager gate; and the mapping picker draws on the store's existing manager collection. Still open: (1) Is Orders' Assign Managers modal a shortcut that writes the same Settings collection and mapping, or a second gate? (2) In "league manager" mode, which record receives the freight: the primary (Point of Contact) record, or a separately chosen manager? (3) How do standalone teams, and League stores with no divisions, map, given that modes are per division? (4) On a Single-Team Ship-to-Team-Manager store, is the gate only the destination address?	Was: Roster Q-14, Roster Q-15, WS Q-18. Settings p.13: "Order Fulfillment Mapping. Shown only for League stores whose fulfillment method is Ship to Team Manager."; Settings p.13: "Per-division mode: each division routes to the league manager, a single division manager, or individual team managers"; Settings p.13: "The picker draws on the store's existing manager collection"; Orders p.4: "an Assign Managers modal blocks the flow — collecting the group manager, or a team manager for every unassigned roster, with address verification"; Roster p.3: "A team sits inside a division or stands alone under the league."; Settings p.13: "pending orders cannot be submitted for fulfillment until an address exists"	**Roster, Orders, Settings**	*Partly answered — Settings p.13 settles that the mapping and its gate apply only to League stores shipping to team managers, and that the picker uses the shared manager collection*	A) One gate predicate, owned by Settings. The Orders modal writes the same collection and mapping. League manager = the primary record. Standalone teams default to the league manager, with an optional team-manager override. The Single-Team gate is "a destination address exists" (recommended). B) Two separate gates and records. C) Each standalone team must have its own team manager.	Submission could be blocked in one place and allowed in another, freight could ship to the wrong person, and Home's C-03/C-08 counts may disagree with Settings.
Q-35	**P2**	Gap	Which columns are in the CSV template, and in what format? This includes Associated Emails (delimiter), Player Shipping Address (one column or split; non-Direct-to-Home stores), Jersey Number (leading zeros), and Contact Phone (formatting characters).	Was: Roster Q-16. Roster p.9: 'a "Download CSV template" link — a structured .csv skeleton with headers matching the data model'; Roster p.9: " (prolook_roster_template.csv)"; Roster p.5: Associated Emails "List of valid emails"; Roster p.5: Player Shipping Address "Street, city, state, ZIP"	**Roster**	*Open*	A) Columns: First Name, Last Name, Jersey Number (text, keeps "00"), Name on Jersey, Contact Email, Contact Phone (any formatting, normalised to 10 digits), Associated Emails (semicolon-separated); address columns (Street, City, State, ZIP) only in Direct-to-Home stores' template (recommended). B) A single template with all columns everywhere, where address is ignored outside Direct-to-Home.	The template generator and the parser can't be built. Excel strips leading zeros, so "00" and "07" are lost without a defined format.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-36	**P2**	Gap	Does CSV import append to or replace the existing roster? Are duplicate numbers checked against existing roster players and pending captures as well as within the file? When two rows in the file share a number, are both skipped or only the later one? Are duplicate players (same name) detected? What are the maximum file size and row count?	Was: Roster Q-17. Roster p.9: '"Row 4: Duplicate jersey number 8 (also Row 2)"); invalid rows are skipped ("n rows skipped — fix and re-upload") while valid rows import'; Roster p.9: "a duplicate number is a skip-worthy error only on rosters that disallow duplicates"; Roster p.13: "The taken-number set for a roster is the union of its committed player records and the pending captures banked against that team."	**Roster**	*Open*	A) Append only. When duplicates are disallowed, check against the existing roster plus pending captures plus earlier rows in the file; the later conflicting row is skipped and the earlier one imports. Same-name rows import, with a non-blocking "possible duplicate player" warning in the preview. Limits: 2 MB / 500 rows per upload (recommended). B) Replace mode: the upload overwrites the roster after a confirmation.	Import results are non-deterministic, and re-uploading a corrected file may double the roster or skip valid players.
Q-37	**P2**	Gap	Settings settles that new rosters inherit the current store-level value at creation (including rosters created during store creation), and it lists the Roster Rules card with no store-type condition, so a Single-Team store has the store-level control. Still open: which duplicate policy governs the storefront number picker and pending captures for a team that has no roster yet? What is the store-level default when the rep never touches it in Step 1?	Was: Roster Q-21. Settings p.18: "New rosters inherit the current store-level value at creation, then diverge freely."; Settings p.7: "Team & Roster. Roster Rules card (Allow Duplicate Numbers — a bulk default over per-roster settings, see Epic F)"; Roster p.12: "A roster's own value is what validation reads — always."; Roster p.13: "The taken-number set for a roster is the union of its committed player records and the pending captures banked against that team."	**Roster, Settings**	*Partly answered — Settings p.18 settles that new rosters copy the store-level value at creation; Settings p.7 lists the Roster Rules card with no store-type condition*	A) For a team with no roster, the storefront reads the current store-level value, and the taken set is that team's pending captures. The store-level default is Off (duplicates not allowed) (recommended). B) Create the roster, with the default policy, as soon as the first capture is banked.	The storefront PDP and checkout can't resolve the rule for the most common roster-optional case: a team with no roster.
Q-38	**P2**	Gap	When is a jersey number reserved for a shopper: on selection at the PDP, on add-to-cart, or only when the order is placed (capture created)? What happens when two shoppers check out the same number at the same time on a roster that disallows duplicates?	Was: Roster Q-22. Roster p.13: "A number claimed by a capture nobody has committed yet is unavailable — otherwise two buyers could take the same number in the gap between order and commit."; Roster p.13: "The conflict is prevented at selection, not reported at submit."; Roster p.19: "Duplicate-number errors surfaced at submit — target near zero"	**Roster**	*Open*	A) The number is held only once the order is placed. A server-side check at checkout rejects the second buyer with "Number X was just taken, pick another", which is an accepted rare exception (recommended). B) A soft hold at add-to-cart with a timeout (e.g. 15 min).	The race window between PDP selection and order is unhandled, and building holds would need a reservation store and expiry.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-39	**P2**	Gap	How does a rep remove a product from a team from this tab? Can a single team opt out of a division-wide ("via division") assignment?	Was: Roster Q-23. Roster p.15: "products are assigned to a team or a whole division from a docked catalog drawer"; Roster p.16: 'rows sourced from a division-wide assignment marked "via division"'; Roster p.17: Epic 6 covers Click to assign / Drag to assign only, with no unassign described	**Roster**	*Open*	A) Direct rows have a Remove action. "Via division" rows can only be removed at the division level, and there's no per-team exclusion in v1 (recommended). B) Add a per-team exclusion from division-wide assignments. C) Unassigning is done only from the Products tab.	Reps can't correct a wrong assignment where they make it, and the exclusion option changes the assignment data model.
Q-40	**P2**	Gap	What is the QX7 entitlement contract (endpoint, caching/refresh, behaviour when QX7 is unreachable as opposed to returning zero brands)? Is the SOURCE pill selection remembered per session, per store or per rep? When a dealership loses a brand, what happens to items staged but not yet committed from that brand, and to that brand's products already live in a store?	Was: WS Q-7. Product p.3: "their prior selection is visible but not pre-committed and they must explicitly re-select"; Product p.3: "any already-staged items remain staged and unaffected"; Product p.1: "opening a bookmarked customizer link for a brand the dealership has since lost access to"; Product p.2: "the SOURCE pill resolves against QX7"	**Product**	*Open*	A) The selection is session-scoped with no default for multi-brand reps. If QX7 is unreachable, show a retry state that is distinct from zero entitlements. Staged items from a lost brand are blocked at commit with a reason. Live products stay purchasable until a Prolook admin delists them (recommended). B) The selection persists per store, and lost-brand products are hidden from the storefront automatically.	Licensing exposure (the problem this spec exists to fix) remains for staged and live items, and the entitlement service can't be built.
Q-41	**P2**	Gap	What is the Customizer 3.0 integration contract? What payload goes in (team name, colors, logos) and what staged-item payload comes back? What happens on cancel, abandon or failure? What is pre-populated when the store has no logo, and in League stores with division colors?	Was: WS Q-8. Product p.5: "Requires integration with the external 'Customizer 3.0' design tool (referenced but outside these files)"; Product p.4: "C1 — The customizer auto-populates Team Name, Team Colors, and Logos from the store's branding when opened from this flow."; Product p.3: "when they return from the customizer, then the item is staged as a custom product"	**Product**	*Open*	A) Hand-off via a return URL carrying a saved-design ID, which the store fetches. Abandoning or failing stages nothing and returns the rep to Add Products. Missing branding fields are left blank. Store-level colors are always used (recommended). B) The Customizer team supplies the API spec.	The hand-off and return can't be built or tested, and failure paths are undefined.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-42	**P2**	Conflict	Lifecycle says it owns status semantics and that other features "own only the UI surface that triggers a transition", so Launch's confirmation and success modals stand. Settings and Lifecycle agree that Close uses a confirmation modal and Lifecycle says Re-open needs none. Still open: (1) Do the launch email and the onboarding-milestone event happen? Lifecycle never mentions them, and Home calls the Launch page "stale". (2) Launch says status changes "confirm with toasts": is that a toast after the Close modal and on Re-open? (3) Is Create Template in the header store menu (Launch), on the Store Status card (Settings), or both, and only after launch?	Was: WS Q-9. Lifecycle p.1: "All other features reference this section for status semantics; they own only the UI surface that triggers a transition."; Launch p.2: 'a "Launch Team Store" modal confirms the consequences'; Launch p.2-3: "confirming launch triggers a notification send to all rostered players and the team manager and fires the onboarding-milestone event"; Lifecycle p.5: "the store transitions to Open immediately"; Settings p.17: "Close Store on the Store Status card, with a confirmation modal"; Lifecycle p.6: "requires no confirmation modal"; Launch p.2: "Status changes confirm with toasts"; Home p.42: "a state that survives only in the stale Launch & Status Controls page"; Launch p.2: "a store menu whose single option, Create Template"; Settings p.17: "Create Template: the same card carries Create Template"	**Launch, Lifecycle, Settings, Home**	*Partly answered — Lifecycle p.1 settles that it owns status semantics and other specs own the triggering UI; Settings p.17 and Lifecycle p.6 agree that Close has a confirmation modal and Re-open has none*	A) Launch keeps its confirm modal, success modal, email and milestone event, and Lifecycle references them. Close = confirmation modal then toast; Re-open = toast only. Create Template appears in both places, after launch only (recommended). B) Drop the launch email and milestone event, since Lifecycle doesn't list them.	The notification send and status feedback differ by spec, and QA can't write acceptance tests for launch.
Q-43	**P2**	Conflict	What counts toward the "at least one product" launch gate? Launch and Lifecycle say a product "added", and Launch says the gate is "products added, not published". But Home's C-09 and C-16 test for a "visible" product. Does a custom item that is staged but not committed count? Does a committed product whose visibility toggle is off count?	Was: WS Q-10. Launch p.2: "The launch gate reads the store's catalog count (≥1 product added)"; Launch p.2: '"published" is no longer a valid term, having been replaced by the per-item visibility toggle'; Lifecycle p.1: "A Draft store cannot be launched until at least one product has been added."; Home p.20 C-16: "Store is Draft and ≥1 visible product exists (Store Status & Lifecycle, Epic A)"; Home p.43: "Given a Draft store with zero visible products, then C-09 renders at Blocking tier"; Product p.3: "the item is staged as a custom product"	**Launch, Lifecycle, Product, Home**	*Contradicted — Home p.20, p.43 test for a visible product, while Launch p.2 and Lifecycle p.1 test for a product added*	A) Only committed catalog items count, regardless of visibility, and Home's C-09 and C-16 change "visible" to "added" (recommended). B) Only committed and visible items count, and Launch and Lifecycle change "added" to "visible", so a store can't launch with nothing to buy.	Home could tell the rep the store can't launch while the Launch button is enabled (or the reverse), and a store could go live with nothing buyers can see.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-44	**P2**	Gap	Who exactly receives the launch email? Does "the team manager" mean the primary manager record only, all manager records, or invited portal users? What happens to players without an email (phone-only, Roster Q-11 (master Q-31))? Does a re-open re-notify anyone? What is the email template? This also needs reconciling with Settings, where manager records "send no email".	Was: WS Q-11. Launch p.2: "all players and the team manager receive an email that the store was created and can purchase team goods"; Launch p.2: "confirming launch triggers a notification send to all rostered players and the team manager"; Settings p.9: "Importing a coach creates a contact record only. It provisions no account, sends no email, and grants no portal access."	**Launch, Settings**	*Open*	A) The email goes to every rostered player with a Contact Email and to the primary manager record, with no portal access implied. Phone-only players are skipped and listed to the rep. Re-open sends nothing. Copy is owned by System Emails (recommended). B) The email goes to all manager records. C) The email goes to invited portal users only.	Wrong or missing recipients at go-live, and possible conflict with the "import grants nothing" rule.
Q-45	**P2**	Conflict	Where do Archived stores appear? Launch says in an "Archived Stores section of the Account page". Lifecycle says only that they're removed from the list, yet promises a read-only workspace and on-demand Close Reports with no defined entry point. Is the Account-page section in scope, and who specifies it?	Was: WS Q-12. Launch p.2: "archived stores are excluded from the directory and their cards appear only in the Archived Stores section of the Account page"; Lifecycle p.7: "Given the store is Archived, when the rep views the Stores tab, then the store no longer appears in the list."; Lifecycle p.7: "accessible in the read-only workspace"	**Launch, Lifecycle**	*Open*	A) An Archived Stores section on the Account page is in scope, with its own spec, and is the only entry into archived workspaces (recommended). B) There is no archived list. Archived stores are reachable only by direct link or through support.	Reps can't reach the read-only archived record that Lifecycle promises to retain.
Q-46	**P2**	Gap	Should Epic E updates be recorded in an order amendment history? The spec leaves this OPEN and says it "should be settled before build". If yes, what is recorded and who can see it?	Was: WS Q-14. Orders p.5: "OPEN — to be confirmed: whether an update is recorded against the order for support purposes … Recommend a minimal record — what changed, when, and by whom"; Orders p.7: "Whether the amendment is recorded in an order history is an open dependency (Epic E) and should be settled before build, since no amendment history exists today."	**Orders**	*Open*	A) Yes. Store a minimal amendment record (field, old value, new value, user, timestamp), visible in the order detail drawer and to support (recommended). B) No history in v1.	The data model can't be finalised, and parent disputes can't be resolved.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-47	**P2**	Conflict	Which orders does All Orders contain? Epic A says "the rep's own orders and fan orders", with My Order and Fan badges only. But the problem statement names three sources, including player team-gear orders, and the Close Report has an "order origin badge". Where do submitted player orders appear, and with what badge?	Was: WS Q-15. Orders p.1: "orders coming from three directions — their own rep-placed orders, individual player orders for team-required/supplied gear, and fan orders"; Orders p.3: "consolidating the rep's own orders and fan orders into one view, with each row badged by origin (My Order / Fan)"; Lifecycle p.10: "WebOrder #, Factory Order #, order origin badge"	**Orders, Lifecycle**	*Open*	A) All Orders includes all three origins, badged My Order, Player and Fan (recommended). B) Player orders appear only in My Team(s) drawers and Pending Orders.	Submitted player orders may have no list view, and the CSV export, KPIs and Close Report may disagree.
Q-48	**P2**	Gap	Can a rep reject, cancel or refund a pending storefront order before submission? Pending orders are "not yet approved by the rep", but no reject or cancel action is specified, although Reports and the Close Report net out refunds and cancellations. Who can cancel, and does cancelling refund the buyer and release the item's commercial lock?	Was: WS Q-16. Orders p.3: "not yet approved by the rep and sent to the factory"; Lifecycle p.10: "a refunds / cancellations summary"; Settings p.15: "If every order against an exempted item is later cancelled, its commercial lock releases"	**Orders, Settings, Lifecycle**	*Open*	A) Add Cancel order (pending only, rep only) with an automatic refund to the buyer. Post-submission cancellations go through support (recommended). B) No cancellation in the Orders tab in v1. All cancellations go through support.	Refund and cancellation flows, and the netted figures that depend on them, have no source.
Q-49	**P2**	Gap	Where do MOQ thresholds and the Minimum Quantity Fee come from: per manufacturer, per product, or per container? What is the fee formula? How is a container with several manufacturers handled? And what data source does "confirms billing" in the review modal use?	Was: WS Q-17. Orders p.1: "most manufacturers enforce minimum order quantities (MOQs)"; Orders p.6: "Pending submission needs MOQ thresholds and minimum-quantity fee calculation per shipping container"; Orders p.3: "a minimum-quantity progress ring with the % to MOQ and an info tooltip stating the fee"; Orders p.3: "enters payment as a PO Number, confirms billing"	**Orders**	*Open*	A) MOQ and fee are configured per manufacturer, with progress computed per manufacturer within a container and a fee of $X per missing unit. Billing defaults from the dealership account (product to supply the values). B) A single platform-wide MOQ and fee per container.	The progress ring, fee itemization and review totals can't be calculated.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-50	**P2**	Ambiguous	What is the canonical order/production status list, and which states does Home's C-18 use? The Orders stepper, the Close Report stage mix and the Order Status Guide each name the stages differently. C-18 triggers on "not yet shipped" but clears on "Delivered": does an order that has shipped but not been delivered keep the card?	Was: Home Q-24, WS Q-19. Orders p.4: "a production-stage stepper (Submit Date → Order Confirmed → production stages → Delivery)"; Lifecycle p.10: "the production-stage mix (Order placed → Confirmed → Artwork → Factory production → Shipped → Delivered)"; Orders p.3: "An Order Status Guide explains each lifecycle stage"; Home p.21 C-18 trigger: "Store is Closed with ≥1 order not yet shipped"; Clears when: "Every order reaches Delivered or is cancelled"	**Home, Orders, Lifecycle**	*Open*	A) Adopt the Lifecycle list (Order placed, Confirmed, Artwork, Factory production, Shipped, Delivered) plus Cancelled and Refunded as the single enum used by the stepper, the guide, reports and Home. C-18 shows while any order is not Delivered or cancelled (recommended). B) Supply the factory's status enum, and C-18 shows only while any order is unshipped.	The stepper, filters, CSV, Close Report and C-18 can't agree on statuses, and the card can flicker or stick.
Q-51	**P2**	Ambiguous	Please define each Reports KPI. Does "Orders — closed sales" mean submitted or all placed? "Pending — active orders currently processing" contradicts Orders' definition of Pending (not yet sent to the factory). Does Total Revenue include pending orders, and how are refunds and cancellations netted? Is Avg. Order Value "per order" or "per session"? What period is the card value itself: all-time or the current month? Is the trend "vs. last month" (Reports) or "vs. last period" (Close Report)? What are the Platform Fee and Card Processing Fee rates?	Was: WS Q-21. Reports p.2: "Card 2 · Orders — total volume count of closed sales"; Reports p.2: "Card 3 · Pending Orders — count of active orders currently processing"; Reports p.3: "average amount spent per order/session"; Reports p.2: "trend vs. last month"; Lifecycle p.10: "the vs.-last-period trend delta the KPI cards already use"; Lifecycle p.10: "Refunds and cancellations net out of revenue consistently with the Reports tab"; Reports p.4: "Platform Fees, Card Processing Fees"	**Reports, Lifecycle**	*Open*	A) Orders = all placed, non-cancelled orders. Pending = the Orders tab's Pending count. Revenue = gross buyer-paid minus refunds and cancellations, all-time for the store. AOV = revenue ÷ orders. The trend is month over month everywhere. Fee rates come from the payments config (recommended). B) Product to supply a definition for each card.	The KPI cards, the Close Report reconciliation AC and the Orders deep-link counts will disagree.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-52	**P2**	Ambiguous	How is a store's "window" defined for always-open and re-opened stores? Does it start at launch, at the last re-open, or at the first order? The Close Report must reconcile with Reports "for the same window", but Reports KPI cards have no date range. What does "last period" mean for a close event? What does the Fundraising "This season (the store's open window)" preset select after several close/re-open cycles?	Was: WS Q-23. Lifecycle p.8: "every order placed during the store's Active Order Window (open date → close date)"; Lifecycle p.12: "every figure in the summary layer matches the corresponding figure on the Reports tab for the same window"; Lifecycle p.9: "Always-open (non-pop-up) stores: no scheduled close date exists"; Reports p.4: "This season (the store's open window), Last 7 days, Last 30 days, Year to date"	**Reports, Lifecycle**	*Open*	A) The window runs from the most recent transition into Open (launch or re-open) to the close event. "Last period" = the previous window, or none if this is the first. "This season" = the current or most recent window. Reconciliation is against Reports figures filtered to that window (recommended). B) The window is cumulative from launch.	Report scoping, the reconciliation AC and the fundraising preset can't be implemented consistently.
Q-53	**P2**	Ambiguous	Which orders count as "attributable to the team" for Team/League Revenue? Do fan orders and rep-placed orders count? In League stores, how are orders with no team selection attributed when filtering by team or division?	Was: WS Q-24. Reports p.3: "Team revenue resolves to gross buyer spend on orders attributable to the team"; Reports p.5: "requires the order→team and team→division joins to be available to the analytics query"	**Reports**	*Open*	A) All non-cancelled orders on the store count. In League stores, orders with no team resolved appear as an "Unassigned" series and are excluded from team/division filters (recommended). B) Only player and team-gear orders count.	The chart series and filters can't be defined, and the chart total may not match Total Revenue.
Q-54	**P2**	Conflict	How does the ship-to destination relate to the primary manager's address and to saved Pick-up Locations? Settings says it is "the same address held on the store's primary manager record", yet it can also be "a reference" to a saved Pick-up Location. Does selecting a location overwrite the primary manager's address? Does clearing the destination clear it, even though "every manager record carries an address"? Does re-designating the primary change the destination? Note: Settings verifies addresses "before [they are] accepted", which answers Home Q-11 (master A-1) (no saved address is unverified).	Was: WS Q-25. Settings p.12: "the same address held on the store's primary manager record (Epic A2c) — not a third copy"; Settings p.12: "A selected location is held as a reference, not a copy"; Settings p.13: "Given the rep clears the destination address, when they save, then the save succeeds"; Settings p.12: "every manager record carries an address, used for order fulfillment routing"; Settings p.13: "an entered address is validated against the map service before it is accepted"	**Settings**	*Open*	A) The destination is its own store field. It defaults from the primary manager's address at creation and then holds either a typed address or a location reference. It never writes to, and isn't written by, manager records afterwards (recommended). B) It is truly one shared field: selecting a location rewrites the primary manager's address, and re-designating the primary moves the destination.	Three surfaces write one field under conflicting rules, so freight or the point-of-contact address could change unintentionally.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-55	**P2**	Gap	In "Team manager chooses" jersey mode, what does a buyer see when their player has no assigned number? How are fans and non-rostered buyers handled? What happens to existing orders and assigned numbers if the mode is switched after orders exist?	Was: WS Q-27. Settings p.18: "Team manager chooses on behalf of players (numbers assigned on the roster; buyers see their assigned number, no entry at checkout)"; Settings p.18: "Selecting a mode saves immediately with a confirmation toast"	**Settings**	*Open*	A) If no number is assigned, number entry is blocked with "Number not yet assigned — contact your team manager". Fans enter no number. The mode locks after the first order (see WS Q-4 (master Q-11)) (recommended). B) Fall back to buyer entry when no number is assigned.	The PDP and checkout logic for unassigned players and fans is undefined.
Q-56	**P2**	Gap	Settings marks these items OPEN and defers them to specs that aren't in this set: (1) the Announcement Message character limit and permitted rich-text marks, including links ("implementation-blocking"); (2) the Team Database coach schema (does it carry an address and a role/title?).	Was: WS Q-28. Settings p.21: "Character limit and permitted marks — OPEN. A ceiling on message length and the permitted rich-text feature set (in particular whether links are allowed) are undecided and implementation-blocking"; Settings p.24: "The Team Database coach schema — specifically whether records carry a mailing address and a role or title — is an open dependency"	**Settings**	*Open*	A) Limit the message to 500 characters, allowing bold, italic, bulleted lists and https links only. The Team Database owner confirms the coach schema, and imported coaches without an address need one entered before they can be mapped (recommended). B) Plain text only in v1.	The editor, sanitizer, storefront banner and coach-import mapping can't be built.
Q-57	**P2**	Ambiguous	Who is the store "owner" allowed to archive? Lifecycle and Settings use "store owner", "owning rep" and "managing rep". If several reps manage a store, which one is the owner? Can ownership be transferred?	Was: WS Q-30. Lifecycle p.2: "Owner only. Irreversible without a support request."; Lifecycle p.7: "when a rep who is not the owner opens the Detail tab, then the Archive Store action is not visible to them"; Settings p.16: "the rep who owns the store can archive it"	**Settings, Lifecycle**	*Open*	A) The owner is the rep who created the store, and ownership is transferable by a Prolook admin only. Other reps can close and re-open but not archive (recommended). B) Any rep with workspace access counts as an owner.	The archive permission check can't be implemented.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-58	**P2**	Gap	How does the auto-close schedule interact with manual status changes and with timezones? (a) If a pop-up store is re-opened after its close date has passed, does auto-close fire again immediately, or must a new date be set first? (b) If the store is closed manually before its close date and then re-opened, does the original close date still apply? (c) If a store launches before its scheduled open date, is it Open but not orderable? (d) Which timezone governs the close moment?	Was: WS Q-31. Lifecycle p.6: "they can re-open to Open from the Store Status card and optionally edit the store schedule"; Lifecycle p.3: ordering window while Closed: "Suspended — does not advance"; Lifecycle p.14: "100% of pop-up stores transition to Closed at their configured close date/time"; Settings p.17: "team codes with start/end/timezone per row"	**Settings, Lifecycle**	*Open*	A) (a) Re-opening with a past close date requires a new close date or a switch to Always open. (b) A future close date still applies. (c) Launching before the open date is allowed, and the storefront shows "Opens on [date]" until then. (d) The store-level timezone applies; team-code rows use their own (recommended).	The auto-close job could re-close a store the rep just opened, and the scheduler logic can't be built.
Q-59	**P2**	Ambiguous	Lifecycle's Dependencies section describes an application verification process (EIN, banking, admin review queue, 24–48 hr wait) that appears nowhere else in the spec. Is this pasted from another spec by mistake, or is there a verification gate before a store can launch?	Was: WS Q-32. Lifecycle p.14: "Verification is a manual, asynchronous process — not an automated check. Requires: secure database storage for application submissions (business-entity fields incl. EIN and banking …) … Approval introduces a 24–48 hr waiting period between submission and access."	**Lifecycle**	*Open*	A) This is a copy-paste error. Remove it from Lifecycle; the launch gate is only "≥1 product" (recommended). B) A verification gate exists, and its spec, owner and position in the state machine must be supplied.	If a gate is real, the state machine is missing a state. If not, engineers may build an unneeded EIN/banking pipeline.
Q-60	**P3**	Ambiguous	Is C-04 Blocking on a Draft store, where no buyers or orders exist yet? (The same question applies to C-09.)	Was: Home Q-20. Home p.4 Blocking: "Buyers, orders, or fulfillment are stopped right now. Someone outside the workspace is already affected."; Home p.25 Draft row includes C-04 and C-09 (C-09 tier Blocking, C-04 tier Blocking)	**Home**	*Open*	A) Keep the fixed tiers; tier never varies by state (recommended, per "Tier is fixed per condition"). B) Exclude C-04 from Draft.	Without an answer, a Draft store shows red cards that don't match the tier's own definition.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-61	**P3**	Conflict	Home and Lifecycle settle that the workspace header carries a status chip (Launch's header description leaves it out), and Lifecycle fixes Closed as amber. Home bans amber anywhere on Home. Still open: (1) When Home echoes the status (summary strip or empty state), is it plain text with no badge colour? (2) Is the Overview KPI "Open Stores" (Lifecycle p.4) or "Active Stores" (Lifecycle p.8)? (3) Do "Active Order Window" and the "Active" invite status in Settings stay, given that Home bans "Active" as a store status?	Was: Home Q-21, WS Q-35. Home p.4: "Amber is not used on Home at all. Decided."; Home p.9: "Home may echo header state in its summary strip"; Home p.42: "The workspace header's chip should be corrected on the same pass"; Lifecycle p.6: "the status badge updates to Open in the store list, workspace header, and any KPI aggregations"; Lifecycle p.8: "Draft (blue), Open (green), Closed (amber)"; Lifecycle p.4: "Overview KPI — Open Stores count"; Lifecycle p.8: "Given the Active Stores KPI card on the Overview"; Launch p.2: "the LAUNCH STORE button is replaced by a Preview Store button … and a store menu"	**Home, Launch, Lifecycle, Settings**	*Partly answered — Home p.42 and Lifecycle p.6 settle that the workspace header carries a status chip; Lifecycle p.8 sets Closed to amber*	A) Home echoes the status as plain text with no colour. The KPI is "Open Stores". "Active Order Window" and the invite status stay, because they name a time range and an access state, not a store status (recommended). B) Home does not echo the status at all.	The status echo could break Home's no-amber AC, and the header layout and KPI label stay inconsistent.
Q-62	**P3**	Ambiguous	Settings settles the route: My Team(s) jump-ins land on Distribution & Fulfillment with the division auto-opened, switching it to individual-teams mode when a specific team is targeted. Still open: when C-03 names several divisions, which one does the deep link auto-open?	Was: Home Q-23. Home p.12 C-03 resolves to: "Settings → Distribution & Fulfillment, with the affected division auto-opened"; Home p.13: "C-03 must name the specific divisions or teams — 'Division 3 and Division 7'"; Settings p.13: "with the right division auto-opened (auto-switching it to individual-teams mode when a specific team was targeted)"	**Home, Settings**	*Partly answered — Settings p.13 settles that the route auto-opens a division, switching to individual-teams mode when a team is targeted*	A) Auto-open the first affected division in structure order (recommended). B) Auto-open none when more than one is affected.	The deep-link behaviour is undefined for multiple divisions.
Q-63	**P3**	Ambiguous	When more than five Blocking conditions hold, do the Action and Informational cards all go behind the expander? What does "n more" count?	Was: Home Q-26. Home p.24: "Blocking-tier conditions are never collapsed into the expander. If more than five Blocking conditions hold, all of them render and the cap is exceeded."	**Home**	*Open*	A) Show all Blocking cards; every non-Blocking card goes behind "n more", where n = the hidden count (recommended). B) Show Blocking plus one Action card.	The cap and expander logic are ambiguous at the boundary.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-64	**P3**	Ambiguous	Which rows and figures does the Home summary rail show, and what is "total raised"? Is Settings left out of the rail on purpose? What count does the Reports row show? What is the "summary strip"? "Total raised" appears on the Home rail and on the Settings Active Order Window card: is it fundraising collected, net fundraising, or gross order revenue? Settings p.27 describes it as an aggregate of order revenue.	Was: Home Q-27, WS Q-40. Home p.29: "One row per tab, in navigation order: My Team(s), Products, Orders, Reports."; Home p.30: "What Home may show instead: total raised during the window"; Home p.9: "echo header state in its summary strip"; Settings p.17: "Total raised: the card shows the total $ amount raised during the window"; Settings p.27: "an aggregate of order revenue raised during the window"; Reports p.4: "Fundraising Collected, Platform Fees, Card Processing Fees, and the bolded Net Fundraising total"	**Home, Settings, Reports**	*Open*	A) Four rows, no Settings row, and "summary strip" means the rail. "Total raised" is gross order revenue for the current window (matching Settings p.27), labelled "Total sales" on both surfaces so it isn't read as fundraising. The Reports row shows it when there is a window, otherwise a route only (recommended). B) "Total raised" is Fundraising Collected, and a Settings row is added.	The rail layout is incomplete, and one figure means different things on Home and Settings.
Q-65	**P3**	Ambiguous	Roster settles the first half of Home Q-28: the stats header reads "divisions · teams · players", and Roster p.14 adds a pending-capture count. Settings gives the Store Type values as "Individual Team Store / League Store". Still open: (1) Do reps see "Incomplete" for bundles on the Products tab? The Products Tab spec is not in this set. (2) Is the store type "Individual Team Store" (Settings), "Individual Team" (Home) or "Single-Team Locker" (Roster)? (3) Confirm that the tab label is always "My Team(s)", and that "member" in Roster p.20 means player. (4) What does a Single-Team store's stats header show?	Was: Home Q-28, Roster Q-30. Roster p.7: "it shows a stats header (divisions · teams · players)"; Roster p.14: "the store-wide stats header, show a pending-capture count alongside the player count"; Home p.29: "Verify that Roster Management's own stats header says players too"; Home p.41: "Verify whether reps see that state label on the Products tab"; Settings p.6: "Store Type (Individual Team Store / League Store)"; Roster p.7: "the My Teams tab organizes structure"; Roster p.20: "member/role management"	**Home, Roster, Settings**	*Partly answered — Roster p.7 settles "players" in the stats header; Settings p.6 names the store types Individual Team Store / League Store*	A) "players" everywhere, store type "Individual Team Store" (as in Settings), tab label "My Team(s)", and the Single-Team header reads "n players · n captures". Cards don't use "Incomplete" until the Products Tab spec confirms reps see it (recommended).	Labels diverge between Home, My Team(s) and Settings, which Home's Governing rule 1 forbids, and the copy freeze depends on it.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-66	**P3**	Gap	Settings settles part: exactly one record is primary at all times, and removing the primary is blocked until another is designated. Settings p.12 also says a store never has zero managers "where a point-of-contact channel depends on one", which implies zero managers is possible when neither channel is on Team Manager mode. Still open: can the manager collection be empty? If so, what does Home show? Does the first manager added become primary automatically, as an exception to "adding a manager never changes the designation"?	Was: Home Q-29. Settings p.11: "exactly one record is designated primary at all times"; Settings p.12: "A store never has zero managers where a point-of-contact channel depends on one."; Home p.32: "The first record on a new store becomes the point of contact by being the only one."; Home p.32: "Adding a manager never changes the designation"	**Home, Settings**	*Partly answered — Settings p.11-12 settle exactly one primary at all times and block removing the primary*	A) The collection can be empty only while both channels are on Salesperson or Custom. The first record added becomes primary automatically, and Home shows an empty panel with Add manager (recommended). B) The collection is never empty, because Step 1 requires a manager.	The invariant and the Add rule contradict each other in the empty case.
Q-67	**P3**	Gap	What are the non-functional targets? For Home: attention-resolver performance on the largest League store, and the League directory height limit. For My Team(s): volume limits (divisions, teams, players per roster), roster edit → storefront latency, real-time number-conflict check, taken-number set refresh, map-service verification timeout, and audit expectations for roster edits.	Was: Home Q-30, Roster Q-36. Home p.47: "The resolver must be cheap enough to run on every workspace entry"; Home p.35: "The panel scrolls within a bounded height"; Roster p.19: "Roster edit → storefront latency" (no target); Roster p.4: "real-time conflict checking backstops any direct-entry path"; Roster p.12: 'an inline "Verifying address with map service…" state'	**Home, Roster**	*Open*	A) For example: p95 first Blocking card ≤500 ms and all conditions ≤2 s; roster edit visible on the storefront within 5 s; taken-set update within 2 s; conflict check p95 ≤300 ms; address verification timeout 10 s; limits of 50 divisions, 300 teams and 150 players per roster; destructive and personalization edits logged (recommended: eng/product to confirm).	No NFR can be tested, performance can't be accepted on large stores, and stale taken-number sets reopen the duplicate race.
Q-68	**P3**	Gap	Are expired resume events (older than 30 days) physically deleted, or only filtered on read? What is the retention policy?	Was: Home Q-31. Home p.48: "collapsed on read by surface + entity keeping the most recent, expired on read by age"; Home p.28: "Events expire after 30 days."	**Home**	*Open*	A) Filter on read, plus a scheduled purge after 30 days (recommended). B) Keep the records indefinitely for analytics.	The resume-event table grows without limit, and the data-retention position is undefined.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-69	**P3**	Gap	Settings settles the coach/manager half of "member/role management": coach records come from the Team Database as point-in-time copies that never write back and never live-sync. Still open: does anything sync rosters (teams and players) with the Team Database, and if so in which direction and how often?	Was: Roster Q-25. Roster p.20: "Requires genuine team-database integration: roster sync and member/role management."; Settings p.8: "imported records are point-in-time copies that never write back to the Team Database and never live-sync from it"; Settings p.24: "The import is a point-in-time copy with no live binding in either direction"	**Roster, Settings**	*Partly answered — Settings p.8, p.24 settle that coach records are point-in-time copies with no sync in either direction*	A) Rosters follow the same model: an on-demand one-way import (for example, "Import from previous season") with no ongoing sync (recommended). B) Two-way roster sync. C) Out of scope for v1; the sentence refers only to coach import.	An integration of unknown size stays in scope, and two-way sync would conflict with the "roster is the rep's working list" model.
Q-70	**P3**	Gap	Please define the branding and naming rules for divisions and teams. Where is a division's "sport" set, and what is it used for? What is the default brand color? Where does the "team avatar" come from? What banner does a standalone team show? Must names be unique (within a division, or store-wide), and what are the length limits?	Was: Roster Q-27. Roster p.3: "Carries branding: name, color, sport."; Roster p.8: "divisions are created with a name and brand color"; Roster p.8: "a branded banner (division color, team avatar)"; Roster p.21: "division brand color still takes its default"; Roster p.3: "Every team must have a name."	**Roster**	*Open*	A) Sport is optional and set in the division edit modal. The default color is the store's primary brand color, and the avatar is the team's initials on the division color. Standalone teams use the store brand. Names must be unique within their parent, with a maximum of 50 characters (recommended).	Create/edit validation and the banner rendering are under-specified.
Q-71	**P3**	Ambiguous	Which characters are allowed in First/Last Name and Name on Jersey (accents, apostrophes, hyphens, spaces, digits, emoji)? Is Name on Jersey stored in uppercase, or only displayed in uppercase?	Was: Roster Q-28. Roster p.4: "Name on Jersey Optional String, max 15 characters Converted to UPPERCASE dynamically."; Roster p.4: "First Name Required String, max 50 characters"	**Roster**	*Open*	A) Names accept Unicode letters, spaces, apostrophes and hyphens. Name on Jersey accepts A–Z, digits, space, apostrophe, hyphen and period (what the factory can print), and is stored in uppercase (recommended).	Records may be accepted that the factory can't print, and snapshots/divergence comparisons may differ only by case.
Q-72	**P3**	Ambiguous	Settings uses a US-only format for manager and destination records (street/apt, city, state, ZIP; 10-digit phone) and accepts an address only after map-service verification. Still open: do player phones and shipping addresses follow the same US-only rule, and is there no "save anyway" for an unverified player address?	Was: Roster Q-29. Roster p.5: Contact Phone "validated to a 10-digit numeric format"; Roster p.12: "a failed check offers a retry-or-leave-blank error"; Settings p.12: "destination address (street/apt, city, state, ZIP)"; Settings p.13: "an entered address is validated against the map service before it is accepted, using the same verification path as manager-record addresses"	**Roster, Settings**	*Partly answered — Settings p.12-13 settle a US format and verify-before-accept for manager and destination addresses*	A) US-only for v1. Phone input accepts formatting characters and is normalised to 10 digits. A failed verification allows only retry or blank, matching Settings (recommended). B) Allow "save anyway" with an "Unverified" badge.	Validation rules and the error UX are ambiguous, and non-US players would be rejected.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-73	**P3**	Gap	Who receives Share Roster Template? Is it every manager record in Settings, the team's mapped manager(s), or recipients the rep selects? Does the email name the team the template is for?	Was: Roster Q-31. Roster p.9: "a standalone flow emails the blank roster template (prolook_roster_template.csv) to team managers … Manager email addresses come from the manager records in Settings"	**Roster**	*Open*	A) The rep picks the recipients from the store's manager records, pre-selected with the team's mapped manager, and the email names the target team (recommended). B) Send to all managers.	The recipient logic for an outbound email is undefined, and a returned template can't be associated with the right team.
Q-74	**P3**	Ambiguous	How do pending captures "count toward team-gear completion tracking" when they are not players and not in the player table? Whose completion count do they affect?	Was: Roster Q-32. Roster p.15: "Captures are not players. They do not appear in the player table, are not counted in player counts … but they do hold jersey numbers (Epic 4) and do count toward team-gear completion tracking."	**Roster**	*Open*	A) Captures count only in team-level and store-level gear aggregates (e.g. reporting). The per-row "n/m" applies to committed players only (recommended). B) The Bank view shows a per-capture n/m.	The completion metric and Home C-05 ("committed player record") may disagree about who is missing gear.
Q-75	**P3**	Gap	What happens when a capture is committed onto a roster that disallows duplicates and its number is already held by a committed player? This can happen after the policy is switched off, or through a direct-entry/CSV backstop path.	Was: Roster Q-33. Roster p.15: "A capture commits at the values it was captured with."; Roster p.14: "Existing duplicates are grandfathered."; Roster p.13: "The taken-number set … is the union of its committed player records and the pending captures"	**Roster**	*Open*	A) Commit always succeeds and the shared number becomes a grandfathered duplicate (reported, not gated) (recommended: consistent with the permissive rule). B) Block the commit until the rep changes one number.	The commit path behaviour is undefined for a reachable edge case.
Q-76	**P3**	Ambiguous	Define the Epic 6 counts and filters. Does the division count pill show distinct products (the union across teams)? Does the "Unassigned" filter treat a product with only a division-wide assignment as assigned? When "Add New Product" is launched from a team or division, is the new product auto-assigned to that scope?	Was: Roster Q-34. Roster p.15: "the number of products reaching its teams, whether assigned division-wide or team-by-team"; Roster p.16: "Unassigned (products on no team), and Not on [X]"; Roster p.16: "Add New Product (hands off to the existing add-product flow)"	**Roster**	*Open*	A) The pill counts distinct products reaching at least one team in the division. Division-wide assignment counts as assigned, and "Not on [X]" includes inherited coverage. Add New Product pre-assigns the new product to the launching scope (recommended).	Aggregate queries and filter predicates may be built inconsistently with Home C-07.
Q-77	**P3**	Conflict	The metric "Roster completeness … vs. estimated true team size" needs a team-size estimate, but Store Home says there is no known true team size. Where does the estimate come from? Should the metric be dropped?	Was: Roster Q-35. Roster p.19: "Roster completeness at ordering-window close — committed players vs. estimated true team size"; Home p.17: "There is no known true team size to compare against, so 'incomplete' is unmeasurable as well as undesirable."	**Roster, Home**	*Open*	A) Drop the metric, or replace it with "committed players + captures per team at window close" (recommended). B) Add an optional "expected team size" field on teams (not a gate).	The metric can't be instrumented, and adding a size field would conflict with Home's decision.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-78	**P3**	Gap	Settings settles the first half of Roster Q-20: changing the store-level Allow Duplicate Numbers value writes it to every roster, overrides included, and there is no read-time inheritance afterwards. Still open: is there a confirmation that shows how many rosters will change, including overridden ones? When switching to "disallow", what happens to rosters that already hold duplicates?	Was: Roster Q-20, WS Q-43. Settings p.18: "setting it writes the value to every roster in the store, and each roster may then override it. The store-level value never overrides a roster afterward"; Settings p.26: "not as a parent value inherited at read time"; Roster p.13: "the Settings control reports a mixed state rather than implying uniformity"; Roster p.14: "Existing duplicates are grandfathered."	**Roster, Settings**	*Partly answered — Settings p.18, p.26 settle that the bulk apply writes every roster, overrides included, with no read-time inheritance*	A) Show a confirmation ("This will set n rosters, including m that differ, to …"). Existing duplicates are grandfathered and flagged, never cleared automatically (recommended).	A bulk change could silently reset per-division choices, and duplicate handling is unclear.
Q-79	**P3**	Conflict	Settings settles the substance: team profit "no longer exists", the team-facing figure is team revenue and fundraising, and the Fundraising Report follows the three-state read. But Lifecycle still uses a Team Profit chart and trend and a boolean Net Fundraising rule, and Reports p.2 still shows the Fundraising Report when "any individual item" has fundraising on, which Settings A4 rules out unless the item is commercially locked. Confirm that Lifecycle and Reports are amended to match, and that the Reports composition adds the Close Report entry that Lifecycle puts at the top of the tab.	Was: WS Q-22. Settings p.26: "team revenue and fundraising, not team profit, which no longer exists"; Settings p.15: "Reporting follows the same three states."; Lifecycle p.10: "Plus the Team Profit chart for the window"; Lifecycle p.10: "Net Fundraising (only when Team Fundraising is enabled; Avg. Order Value is promoted into this slot when it is disabled)"; Reports p.2: "or when any individual item within the store has fundraising enabled"; Settings p.14: "A rep cannot enable fundraising on one item in a store where fundraising is off."; Lifecycle p.9: "A Store Close Report entry sits at the top of the Reports tab"	**Lifecycle, Reports, Settings**	*Partly answered — Settings p.19, p.26 settle that Team Profit no longer exists; Settings p.15 settles that reporting follows the three-state read*	A) Replace Team Profit with Team Revenue throughout the Close Report, gate fundraising on the three-state read, reword Reports p.2 to "commercially locked items still collecting", and add the Close Report entry as the top component of the Reports tab (recommended). B) Keep Team Profit for the Close Report only. This needs a data source that no longer exists.	The Close Report would show a metric with no data source and hide fundraising money still arriving, and the Reports layout would omit a component it owns.
Q-80	**P3**	Conflict	Settings and Lifecycle (transition table and Epic E) agree that only Prolook support can reverse an archive. Still open: does support restore the store to Open or to Closed? Please correct Lifecycle p.2, which says "a managing rep" can restore it.	Was: WS Q-29. Lifecycle p.2: "Cannot be self-reversed — restoring an archived store can only be done by a managing rep."; Lifecycle p.3: "Not self-service. Requires a Prolook support request. Support staff only."; Lifecycle p.7: "no self-service reversal path exists in the product UI"; Settings p.16: "the action can only be undone by support"	**Lifecycle, Settings**	*Partly answered — Settings p.16 and Lifecycle p.3, p.7 settle that only Prolook support can reverse an archive*	A) Support only. The store is always restored to Closed so the rep re-opens it deliberately, and the p.2 wording is corrected (recommended). B) Support restores whichever state the ticket requests.	The admin tooling's target state is undefined, and the p.2 wording implies a self-service path.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-81	**P3**	Conflict	Home settles the six-tab shell ("Six tabs, every store, every state"), and Launch and Settings both put the Store Status card in Settings → Schedule & Status with Close Store / Re-open Store. Only Lifecycle still says "Detail tab", "Roster" and "Pause". Confirm that Lifecycle is amended to the six-tab shell (Home, My Team(s), Products, Orders, Reports, Settings) and these labels.	Was: WS Q-33. Lifecycle p.5: "all tabs (Detail, Products, Roster, Orders, Reports) are accessible"; Lifecycle p.5: "the rep opens the Store Status card on the Detail tab"; Lifecycle p.2: "rep clicks Pause on the Store Status card"; Home p.10: "Six tabs, every store, every state."; Launch p.2: "the actionable pause/resume control lives on the Settings tab's Store Status card (Close Store / Re-open Store"; Settings p.7: "Store Status card → Close / Re-open Store (Epic D), the Create Template action, and the Danger Zone → Archive Store (Epic C)"	**Lifecycle, Launch, Settings, Home**	*Partly answered — Home p.10 settles the six-tab shell; Launch p.2 and Settings p.7 put the Store Status card in Settings → Schedule & Status*	A) Amend Lifecycle: the card lives on Settings → Schedule & Status, labelled "Close Store" and "Re-open Store", in the six-tab shell (recommended). B) A separate Detail tab exists, and Home and Settings are amended.	Deep links, ACs and test cases point at a tab that doesn't exist in the spec that calls itself the single source of truth.
Q-82	**P3**	Gap	Settings settles the commercial lock trigger: an item with a non-cancelled order has its commercial fields, including the fundraising toggle, locked, and the lock releases if every order is cancelled. Settings also settles the three-state fundraising read. Still open: what exactly does the Customize design lock on commit cover? Is the sport/category card list fixed or sourced per brand, and what are the "gendered variants"? The Product Catalog Management spec is still not in the set.	Was: WS Q-34. Product p.4: "Custom items carry a permanent design lock on commit per Governing rule 1."; Product p.4: "(baseball, basketball, football, soccer, apparel, accessories, and gendered variants)"; Settings p.15: "An item carrying a non-cancelled order has its fundraising toggle locked along with the rest of its commercial fields (Products Tab, Governing rule 1)."; Reports p.5: "matching the three-state read specified in Product Catalog Management, Governing rule 3"	**Product, Reports, Settings**	*Partly answered — Settings p.15 settles that an item with a non-cancelled order has its commercial fields, including the fundraising toggle, locked*	A) Provide Product Catalog Management for review. Interim assumption: the design lock freezes design and artwork only. Cards are sourced per brand from the template catalog (recommended).	The design-lock scope and the picker data source are undefined.
Q-83	**P3**	Ambiguous	What does a buyer see at a Draft store's URL? Launch says Closed is "technically equivalent to a draft", but Lifecycle gives Closed a "This store is closed" page, a badge and a Close Report, and calls the Draft URL "inaccessible". Is Closed a distinct persisted state? Is a Draft URL a 404, the neutral closed screen, or a login wall?	Was: WS Q-36. Launch p.2: "Closed suspends ordering (technically equivalent to a draft)"; Lifecycle p.3: "Not live — storefront URL is inaccessible to buyers"; Lifecycle p.7: 'a neutral "This store is currently closed" screen'	**Launch, Lifecycle**	*Open*	A) Closed is a distinct persisted state. Draft URLs serve the same neutral closed screen, so nothing is leaked, and the "equivalent to a draft" wording is removed (recommended). B) Draft URLs return 404.	The storefront routing for Draft is untestable, and the status persistence model is unclear.

ID	Priority	Type	Question	Source / quoted text	Spec	Status	Options / suggested answer	Impact if unanswered
Q-84	**P3**	Gap	Will the Team Revenue chart have a Day / Month / Year granularity toggle and a highlighted current-period bar (OPEN)? What is its default time bucket?	Was: WS Q-38. Reports p.2: "OPEN — to be confirmed: whether the Team Revenue chart carries a Day / Month / Year granularity toggle and a highlighted current-period bar"	**Reports**	*Open*	A) Yes, matching the Overview's graph cards, defaulting to Month (recommended). B) Monthly bars only.	The chart's design and query shape are unsettled.
Q-85	**P3**	Gap	Home closes Settings' first OPEN item as yes: "Add from Team Database" goes on the manager card. Settings still lists it as OPEN, so confirm that Settings is amended (Appendix A 8b, see master Q-1). Still open: should the theme color picker warn about, or block, low-contrast colors?	Was: WS Q-39. Settings p.9: 'OPEN — to be confirmed: whether this re-fetch should be surfaced on the League/Team Manager Information card as well (e.g. an "Add from Team Database" action'; Home p.33: "Settings Epic A1's standing open question closes as yes on the strength of this: the affordance goes on the manager card"; Settings p.20: "Contrast — OPEN. Whether the picker warns or blocks on a color with insufficient contrast"	**Settings, Home**	*Partly answered — Home p.33 settles item (1) as yes*	A) Amend Settings to close (1) as yes. Contrast is a warning, not a block (recommended).	The owning spec stays open on an item another spec treats as decided, and the picker behaviour is undefined.
Q-86	**P3**	Gap	A store archived directly from Open never gets a Close Report, because archiving "does not generate" one and a close event is only a transition into Closed. Is that intended?	Was: WS Q-42. Settings p.19: "Archiving: archiving (Epic C) does not generate or regenerate a report."; Lifecycle p.8: "A close event is any transition into Closed"	**Settings, Lifecycle**	*Open*	A) Intended. The archive confirmation warns that no Close Report will be produced and offers "Close first" (recommended). B) Archive from Open generates a Close Report.	A season's results could be lost when reps archive straight from Open.
Q-87	**P3**	Gap	What fundraising toggle state do items added while the store-level flag is off get, and what do they return to after a store-level re-enable (they have no prior state to restore)?	Was: WS Q-44. Settings p.13: "New items added after this point default their toggle to" on (while enabled); Settings p.14: "every item returns to the enabled/disabled state it held immediately before the disable"	**Settings**	*Open*	A) Items added while the flag is off are stored with the toggle on and come back on when fundraising is re-enabled (recommended). B) They come back off.	Re-enable behaviour is undefined for new items.

Answered by another spec

Ref	Was	Original question (short)	Answered by (doc p.N, "quote")	Answer
A-1	Home Q-11	When is C-04 shown if a ship-to address exists but isn't verified?	Settings p.13: "an entered address is validated against the map service before it is accepted, using the same verification path as manager-record addresses"; Settings p.13: "an edit here is what the freight gate reads"; Settings p.12: "a location switched off at workspace level leaves this store with no destination"	No unverified destination can be saved, so "empty" and "no verified address" are the same state. C-04 triggers and clears on the predicate the freight gate already reads (option A). A switched-off Pick-up Location also produces the empty state.

Ref	Was	Original question (short)	Answered by (doc p.N, "quote")	Answer
A-2	Home Q-22	Can the Setup Guide and the Close Report both trigger on one entry?	Lifecycle p.5: "Given a newly created Draft store, when the rep enters the workspace for the first time, then the Store Setup Guide's cover card states that the store is not yet live"; Lifecycle p.9: "Auto-trigger condition: the store is in Closed state and the current user has not yet seen the report for this close event."	No. The Setup Guide presents on first entry to a newly created Draft store, and the Close Report only on a Closed store. A store can't be both, so no ordering rule is needed (option A).
A-3	Roster Q-8	How does My Team(s) behave on Pop-up and Always-on stores?	Settings p.6: "Store Type (Individual Team Store / League Store)"; Settings p.17: "pop-up stores with a set window get the full progress treatment, while always-on stores show an 'Always open' pill"; Lifecycle p.9: "Always-open (non-pop-up) stores: no scheduled close date exists"	There are only two structural store types. Pop-up and Always-on are schedule modes (Set window vs Always open), so the tab follows the structural type: League or Individual Team (option A).
