Clarification Questions — TS-Store Home (Home Tab)

Superseded by output/2026-10-16-ts-store-all/clarification-questions.md (8-spec master)

Sources: input/requirements/TS-Store Home (Home Tab)-161026-011919.pdf (49 pp.) · Total: 31 (P1 5 · P2 14 · P3 12)

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-1	**P1**	Gap	Appendix A is referenced throughout but is not in the document. Where is it, and when will each amendment land (tab-shell change, 8b, 8d, 8e Point of Contact rename, 10 header chip)?	OI-16. p.8: "The Tabbed Store Dashboard shell must be amended — see Appendix A."; p.31: "Settings must adopt the same term, and Home must not ship ahead of it. See Appendix A, amendment 8e."; p.35: "(Appendix A, 8d)"; p.42: "(Appendix A, 10)"	**A) Supply Appendix A, with an owner and target date for each amendment, before build (recommended). B) Ship Home with interim labels. The spec forbids this for Point of Contact. C) Descope the features that depend on an amendment until it lands.**	The six-tab shell, the Point of Contact tag, the post-launch lock list and the status chip all rely on changes to other specs that can't be reviewed or scheduled, so the release date can't be committed.	Contradicted → master Q-1
Q-2	**P1**	Conflict	C-17 needs the Close Report "seen" flag, but Epic B and Dependencies say Home reads neither flag. Which is right? And because the Close Report auto-presents on first entry, when would C-17 ever show?	OI-21. p.10: "Home reads neither flag and writes neither."; p.49: "Home reads neither … nor the Close Report's per-user-per-close-event seen flag"; p.21 C-17 trigger: "Store is Closed and this user has not seen the report for this close event"; Clears when: "Report is viewed or dismissed"	**A) Home may read the seen flag read-only; amend p.10 and p.49 (recommended). B) Remove C-17, since the auto-presenting sequence already covers it. C) Redefine C-17 as "dismissed without opening the report", which needs a definition of "viewed".**	The resolver either breaks a stated constraint or can't evaluate C-17. Also, as written the card clears as soon as the auto-sequence is dismissed, so it may never render.	Partly answered → master Q-14
Q-3	**P1**	Conflict	What exactly triggers C-15: the C-14 urgent range (final 7 days) plus C-05, or 14 days plus C-05? And which spec owns a 14-day threshold?	OI-7. p.20 C-15 trigger: "C-14's trigger and C-05's trigger both hold"; p.22: "C-14 matches the pill at 7 days. C-15 fires earlier, at 14 days"; p.22: "C-14 reads the existing urgent threshold; it does not define one"; p.3: "Home must not recompute … 'days left'"	**A) C-15 = window ≤14 days left AND C-05 holds, with the 14-day value published by Store General Settings Epic E (recommended). B) C-15 = C-14 trigger AND C-05 (7 days). C) Keep 14 days as a Home constant. This breaks Governing rule 1.**	One of two incompatible triggers gets built. If 14 days is chosen, the threshold has no owning spec and Home would hold a second computation.	Contradicted → master Q-2

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-4	**P1**	Conflict	Please give an explicit condition × store-state (and store-type) matrix. Specifically: is C-14 excluded on Open or on Closed? Is the count 24 or 25? Can C-07, C-21 to C-24 and C-27 hold on Draft stores? What does "Most of the catalogue" exclude on Closed stores?	OI-5, OI-6. p.25: "What differs is which of the 24 registered conditions can hold." Open row "Cards that cannot": "C-09, C-16 (launch-specific), C-17, C-18, C-20 (close-specific) C-14 (no live window to be closing)"; C-14 trigger p.20: "Store is Open, has a set window"; Draft row: "C-04, C-08, C-09, C-16 — plus catalog conditions C-10 to C-13"; Closed row: "Most of the catalogue"	**A) Add a full matrix of C-01 to C-24 and C-27 (25 active; C-25 retired; C-26 not registered) by Draft/Open/Closed/Archived and by League/Individual and Pop-up/Always-on. Move C-14 (and C-15, C-16, C-09) to Closed's "cannot hold" list (recommended). B) Keep the table and correct only the C-14 placement and the count.**	Gating lives in the resolver (p.49). As written, C-14 would never render on Open stores, Draft stores could miss real cards (such as C-07 or C-24), and Closed-store behaviour is guesswork.	Partly answered → master Q-3
Q-5	**P1**	Gap	Which surfaces and write types emit a resume event? For each one, what are the surface key, entity type, field-group/operation identifier and label template?	OI-18. p.48: "The write path must be explicitly opt-in per surface, not a blanket hook on every mutation"; p.27: "'Home Jersey — pricing' is rendered from a product reference plus a field group at read time"; p.27 qualifies: "A write against a resumable surface — one with a stable deep link"	**A) Provide a registry table (surface, write type, entity, field group/operation, label template, deep-link key) covering at least My Team(s), Products and Settings (recommended). B) Start with a minimum set (product pricing/details, roster edits, CSV import, division/team edits, Settings sections) and grow it.**	The resume trail (Epic D) and the only new database record can't be built or tested, and acceptance criteria for "qualifying write" can't be verified.	Open → master Q-4
Q-6	**P2**	Conflict	Must every card carry an action? The Informational tier allows "action is a link or is absent", but Presentation says every card has exactly one primary action. Does a link count as the primary action, and can an Informational card have none?	OI-3. p.4 tier table, Informational: "Neutral rail; action is a link or is absent"; p.25: "Every card carries exactly one primary action."	**A) Every card has exactly one action. For Informational cards it is rendered as a link (recommended, and consistent with the Epic I buttons for C-14 and C-17 to C-20). B) Informational cards may have no action; amend p.25.**	Card component variants and AC tests differ, and the treatment for C-18, which says "nothing needed from you", is unclear.	Open → master Q-15

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-7	**P2**	Conflict	Is C-24 Action tier (blue) or Informational tier (neutral)?	OI-20. p.5: "C-07 and C-24 are therefore blue on Home and amber on arrival."; p.23 catalogue C-24 tier: "Informational"; p.4: Action = "Blue rail", Informational = "Neutral rail"	**A) Action (blue), and correct the catalogue. B) Informational (neutral), and correct p.5 (recommended, because unactivated invites aren't blocking anyone and C-23 is also Informational).**	Rail colour, ordering and the tab dot for C-24 are contradictory.	Open → master Q-16
Q-8	**P2**	Ambiguous	Confirm role scope: does the Team Manager Portal get a Home-equivalent area in v1? Which workspace users (co-managing reps, salespeople, admins) see Home?	OI-1. p.6: "OPEN — to be confirmed … whether the Team Manager Portal gains an equivalent surface … Recommendation: no, this version. … Confirm before build."; p.49: "If Home is ever extended to team-manager-role users, the resolver must return a permission-filtered condition set"	**A) No portal surface in v1; Home is shown to all rep-role users with workspace access (recommended). B) Add a portal "third area" with a permission-filtered resolver.**	Resolver permission filtering and the scope estimate depend on this answer. The doc itself says "Confirm before build".	Partly answered → master Q-5
Q-9	**P2**	Ambiguous	Do Action-tier conditions put a dot on the tab label, or only Blocking-tier ones? And which tab gets the dot for conditions that route to the workspace header (C-16) or to Reports (C-17)?	OI-2. p.9: "Blocking-tier conditions produce the dot; Informational-tier conditions do not."; p.48: "Tab-label indicators need the resolver's per-tab roll-up, restricted to Blocking-tier conditions"	**A) Blocking only, per p.48; header-routed conditions produce no dot (recommended). B) Blocking and Action.**	Nav-badge logic and the per-tab roll-up query differ, and there's a risk that dots become noisy or that queued work is missed.	Open → master Q-17
Q-10	**P2**	Conflict	When more than one shipping group is below MOQ, what does the single C-02 card say and where does it route?	OI-13. p.11 C-02 trigger: "≥1 pending group below its minimum-quantity threshold"; Resolves to: "Orders → Pending Orders, scrolled to that group"; p.38 headline: "Division 3 is under the minimum to ship"; p.24: "One card per condition, not per record."	**A) One card: "n groups are under the minimum to ship". Route to Pending Orders scrolled to the first group, or unscrolled if there are several (recommended). B) Name the groups, as C-03 does ("Division 3 and Division 7…").**	Copy and the deep link are undefined for the common multi-group case.	Open → master Q-18
Q-11	**P2**	Ambiguous	When is C-04 shown if a ship-to address exists but isn't verified? What does "verified" mean, and which spec owns it?	OI-8. p.12 C-04 trigger: "Fulfillment method is Ship to Team Manager and the destination address is empty"; Clears when: "A verified destination address exists"	**A) Trigger = no verified address (empty or unverified), using the freight gate's own predicate (recommended). B) Clears when the address is non-empty; drop "verified".**	A non-empty but unverified address leaves the card neither triggered nor cleared. Home could disagree with the freight gate on a Blocking condition.	Answered → master A-1

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-12	**P2**	Ambiguous	When C-03 suppresses C-08 for a division, should C-08's count and names exclude that division (with the card removed only if nothing is left), or should C-08 be hidden entirely?	OI-10. p.15: "Where both are present for the same division, C-03 suppresses C-08 for that division"; p.39 C-08 headline: "n divisions or teams have no manager assigned"; p.24: "One card per condition, not per record."	**A) Subtract the suppressed divisions from C-08's count, and hide C-08 only when the remainder is zero (recommended). B) Hide C-08 whenever C-03 holds.**	The suppression rule could make C-08's count disagree with Settings, or hide unassigned divisions that have no orders yet.	Open → master Q-19
Q-13	**P2**	Gap	Within a tier, what is the fixed cost-of-delay rank for each condition?	OI-4. p.24: "Within a tier, order by cost of delay, defined as a fixed per-condition rank recorded in the catalogue above, not by recency and not by count." The C1 to C5 tables have no rank column.	**A) Add a Rank column to the catalogue (owner: product) (recommended). B) Use catalogue ID order within each tier as the interim rank.**	Deterministic ordering (an AC on p.42) can't be implemented, and the top-5 cap decides which cards are visible.	Open → master Q-20
Q-14	**P2**	Conflict	What is C-05's "oldest age" based on, and where does it appear, given that its Epic I detail line has no age?	OI-12. p.25: "'Oldest placed 3 days ago' is required on C-01, C-05, and C-06"; p.38 C-05 detail line: "Window closes date — n of them have no email or phone, so a reminder won't reach them"	**A) Drop the age requirement for C-05 and keep the window-close date. On always-on stores (no window) show only the contact caveat (recommended). B) Define the age basis (for example, oldest player commit date) and add it to the detail line.**	The resolver contract needs an "oldest-affected timestamp" for C-05 that has no source, and the copy conflicts with the rule.	Open → master Q-21
Q-15	**P2**	Ambiguous	Is the resume collapse key "surface + entity" or "surface + entity + field group"? If a rep edits pricing and then images on the same product, how many rows appear, and which label is shown?	p.28: "Collapse by surface + entity, keeping the most recent."; p.27: "'Home Jersey — pricing' is rendered from a product reference plus a field group"; p.48 record carries "field-group or operation identifier"	**A) Collapse on surface + entity; the label uses the most recent event's field group (recommended). B) Collapse on surface + entity + field group, so one product can produce several rows.**	The read-side query and the visible trail differ, which affects the 5/15-row budget.	Open → master Q-22

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-16	**P2**	Gap	What copy should be used for the texts Epic I doesn't specify: resume rows, the empty attention state, the Archived state, the "n more" expander, the Point of Contact footer statement, and the "no portal access" disclosure in the manager modal?	OI-19. p.29: "Copy is specified in Epic I." (Epic I pp.36-42 has no resume-row copy); p.25: empty state "states plainly that nothing needs the rep right now and names the store's current lifecycle state"; p.32: modal "states that adding a manager creates a contact record only and does not grant portal access"	**A) Product/UX writes the strings and adds them to Epic I before build (recommended). B) Dev uses placeholders, and copy is reviewed before release.**	The UI text and copy ACs (banned terms, vocabulary) can't be implemented or checked.	Open → master Q-23
Q-17	**P2**	Conflict	How are the success metrics collected without persisting new state? Several need condition first-held timestamps and per-session resolution, but Home "persists nothing" and the database change is "limited to the resume-event record".	p.45: "Share of Epic C conditions resolved within one session of first being surfaced"; "Time from a Blocking condition first holding to its resolution, before and after Home"; p.3: "Home persists nothing about the store."; p.49: "Database updates limited to the resume-event record."	**A) Emit analytics events (card rendered/clicked/cleared) to the existing telemetry pipeline, not the store database, and agree a pre-launch baseline (recommended). B) Drop the metrics that need condition history.**	Instrumentation will either be missing at launch or will break the no-new-state rule, and the before/after baseline can't be recovered afterwards.	Open → master Q-24
Q-18	**P2**	Gap	Which owning-tab filters already exist, who will build the missing ones, and what should Home do if a filter isn't delivered?	OI-17. p.48: "Where a route needs a filter Home cannot express — C-05's incomplete-player view, C-10's render-pending filter, C-23's exempted-item filter — that filter must be added to the owning tab … Audit which of those filters exist today … the only item on this page still carrying unknown cost." C-15, C-20 and C-27 also route to filtered views.	**A) Run the audit now, and give each missing filter an owner and date as an amendment to the owning spec (recommended). B) For v1, route unfiltered to the owning tab and accept weaker scoping. C) Hold the affected conditions until their filter lands.**	This is hidden scope in other teams' specs. Without it the "scoped or filtered" AC (p.42) fails for these cards.	Partly answered → master Q-25
Q-19	**P2**	Ambiguous	Is C-27 in the v1 scope, given that it depends on a Products Tab amendment that must land first?	p.48: "C-27 depends on an amendment to Products Tab that must land first … must not ship ahead of that amendment"	**A) Register C-27 but feature-flag it off until the Products amendment ships (recommended). B) Remove it from v1. C) Block Home's release on the amendment.**	Release sequencing, and whether C-27 is in the condition count and ACs, are undecided.	Open → master Q-26

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-20	**P3**	Ambiguous	Is C-04 Blocking on a Draft store, where no buyers or orders exist yet? (The same question applies to C-09.)	p.4 Blocking: "Buyers, orders, or fulfillment are stopped right now. Someone outside the workspace is already affected."; p.25 Draft row includes C-04 and C-09 (C-09 tier Blocking, C-04 tier Blocking)	**A) Keep the fixed tiers; tier never varies by state (recommended, per "Tier is fixed per condition"). B) Exclude C-04 from Draft.**	Without an answer, a Draft store shows red cards that don't match the tier's own definition.	Open → master Q-60
Q-21	**P3**	Conflict	If Home echoes the store status (header chip or empty-state lifecycle name), how is "Closed" shown without amber?	p.9: "Home may echo header state in its summary strip"; p.4: "Closed (amber)"; p.4: "Amber is not used on Home at all. Decided."; p.42 AC: "no amber is used anywhere on Home"	**A) Show the lifecycle state as plain text with no badge colour (recommended). B) Don't echo the status chip on Home.**	The status echo could break the no-amber AC.	Partly answered → master Q-61
Q-22	**P3**	Conflict	Can the Setup Guide and the Close Report both trigger on one entry, for example for a rep whose Setup Guide seen-state for that store type is unset and who enters a just-closed store? If so, which presents first?	p.10: "They never both fire. … No ordering rule between the two is required, and none should be built."; p.10: "The Setup Guide's seen-state remains per rep per store type"	**A) The Setup Guide trigger is "first entry after creation" at store level only, so they can't collide. Confirm this (recommended). B) If both hold, show the Close Report first.**	There's an edge-case collision with no defined behaviour.	Answered → master A-2
Q-23	**P3**	Ambiguous	When C-03 names several divisions, which division does the deep link auto-open?	p.12 C-03 Resolves to: "Settings → Distribution & Fulfillment, with the affected division auto-opened"; p.13: "C-03 must name the specific divisions or teams — 'Division 3 and Division 7'"	**A) Auto-open the first affected division in structure order (recommended). B) Auto-open none when more than one is affected.**	The deep-link behaviour is undefined for multiple divisions.	Partly answered → master Q-62
Q-24	**P3**	Ambiguous	C-18 triggers on "not yet shipped" but clears on "Delivered". Does an order that has shipped but not been delivered keep the card?	p.21 C-18 trigger: "Store is Closed with ≥1 order not yet shipped"; Clears when: "Every order reaches Delivered or is cancelled"	**A) Use one state for both: card shows while any order is not Delivered/cancelled (recommended). B) Card shows while any order is unshipped.**	The trigger and clear predicates disagree, so the card can flicker or stick.	Open → master Q-50
Q-25	**P3**	Ambiguous	Is C-24's 7-day threshold defined in Store General Settings Epic A2b, or only on Home?	OI-11. p.24 C-24 trigger: "not logged in beyond a threshold (Store General Settings, Epic A2b)"; p.24: "C-24's threshold is 7 days."	**A) Settings Epic A2b publishes 7 days and Home reads it (recommended). B) Home owns it. This breaks "No second computation".**	Without an answer, the threshold has no owner and could drift from Settings' amber dot.	Contradicted → master Q-2

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-26	**P3**	Ambiguous	When more than five Blocking conditions hold, do the Action and Informational cards all go behind the expander? What does "n more" count?	p.24: "Blocking-tier conditions are never collapsed into the expander. If more than five Blocking conditions hold, all of them render and the cap is exceeded."	**A) Show all Blocking cards; every non-Blocking card goes behind "n more", where n = the hidden count (recommended). B) Show Blocking plus one Action card.**	The cap and expander logic are ambiguous at the boundary.	Open → master Q-63
Q-27	**P3**	Ambiguous	Which rows and figures does the summary rail show? Is Settings left out on purpose? What count does the Reports row show? Is "total raised" shown, and on which row? What is the "summary strip"?	OI-9. p.29: "One row per tab, in navigation order: My Team(s), Products, Orders, Reports."; p.2: "a second route into each tab"; p.30: "Reports row is a route, not a KPI strip"; "What Home may show instead: total raised during the window"; p.9: "echo header state in its summary strip"	**A) Four rows, no Settings; the Reports row shows "total raised" (no bar) when there is a window, otherwise a route only; "summary strip" means the rail (recommended). B) Add a Settings row.**	The rail layout and data reads are incomplete.	Open → master Q-64
Q-28	**P3**	Gap	Two labels are pending verification: does Roster Management's stats header say "players" or "members", and do reps see "Incomplete" for bundles on the Products tab?	OI-14, OI-15. p.29: "Verify that Roster Management's own stats header says players too — if it says members, that spec and this one must be reconciled"; p.41: "Verify whether reps see that state label on the Products tab — if they do, the card may use it"	**A) Product confirms both before copy freeze; default to "players" and to no "Incomplete" on cards (recommended).**	The final copy and the "players" AC depend on unverified specs.	Partly answered → master Q-65
Q-29	**P3**	Gap	Can a store's manager collection be empty? If so, what does Home show, and does the first manager added become the Point of Contact automatically?	p.30: "exactly one record is designated primary at all times"; p.32: "The first record on a new store becomes the point of contact by being the only one."; p.32: "Adding a manager never changes the designation"	**A) The collection can be empty before Step 1 completes. The first Add sets the designation automatically, which is an exception to "never changes the designation" (recommended). B) The collection is never empty (Step 1 requires a manager).**	The invariant and the Add rule contradict each other in the empty case.	Partly answered → master Q-66

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-30	**P3**	Gap	What are the performance targets for the attention resolver, and what is the height limit for the League directory?	p.47: "The resolver must be cheap enough to run on every workspace entry … Home cannot be the surface that makes opening a store slow."; p.35: "The panel scrolls within a bounded height"	**A) For example, p95 first Blocking card ≤500 ms and all conditions ≤2 s on the largest League store; directory capped at a fixed max height (recommended: product/eng to set).**	No NFR can be tested, and performance can't be accepted on large stores.	Open → master Q-67
Q-31	**P3**	Gap	Are expired resume events (older than 30 days) physically deleted, or only filtered on read? What is the retention policy?	p.48: "collapsed on read by surface + entity keeping the most recent, expired on read by age"; p.28: "Events expire after 30 days."	**A) Filter on read, plus a scheduled purge after 30 days (recommended). B) Keep the records indefinitely for analytics.**	The resume-event table grows without limit, and the data-retention position is undefined.	Open → master Q-68
