Questions

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-1	**P1**	Conflict	Can a player who has orders be moved to another team or deleted? Orders says roster edits are never blocked and that moving or deleting a player leaves orders untouched, which contradicts the Roster spec's OPEN refusal to move a player with team-gear orders (Roster Q-5, Q-24). If moves are allowed, which pending container does the moved player's unsubmitted order stay in: the original team's or the new one's? For a deleted player, is there still a divergence/Epic E update path, and where does the player's order tracking appear?	OI-18. Orders p.2: "Editing a player's number, renaming them, moving them to another team, deleting them, or clearing the roster entirely leaves every existing order line exactly as it was."; Orders p.2: "Roster Management deliberately blocks nothing"; Roster p.18 (Roster Q-5): "the move is refused, the control is disabled, and the reason is stated"	**Orders (+ Roster ref)**	*A) Allow moves and deletes. The order line keeps the team code stamped at purchase, so a pending order stays in its original container. A deleted player's lines have no divergence and no update action, and they stay visible only in Orders (recommended; this closes Roster Q-5 as "permit" and the order half of Roster Q-18). B) Keep the Roster refusal and amend the Orders governing rule. C) Allow the move but re-route pending lines to the new team's container.*	MOQ containers, freight routing and per-player tracking can't be built, and the two specs ship contradictory rules for the same action.	Partly answered → master Q-27

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-2	**P1**	Conflict	In "Players choose their own numbers" mode, does an order write the jersey number back onto the roster? Settings says the roster "fills in as orders arrive", but Orders lists only two order-to-roster paths (address write-back and Roster Bank capture). This is the open Roster Q-1, and Settings appears to answer it with "yes".	OI-49. Settings p.18: "Players choose their own numbers (buyers enter a number on the product page and the roster fills in as orders arrive)"; Orders p.2: "Checkout writing a shipping address onto a player record (Roster Management, Epic 3) and a team-gear order creating a Roster Bank capture both run in the opposite direction."	**Settings, Orders**	*A) Yes. In Players-choose mode the number (and Name on Jersey) fills a blank roster field only, never overwrites one, and is added as a third named write-back path in Orders and Roster (recommended). B) No. Only the address writes back, and Settings copy is corrected. C) Yes, and it overwrites existing values.*	The roster/order data contract and the divergence logic can't be finalised. Roster Q-1 stays open.	Partly answered → master Q-6
Q-3	**P1**	Gap	What happens to pending (unsubmitted) orders when a store is Closed or Archived? Can the rep still submit pending orders to the factory from a Closed store? On archive the workspace becomes read-only: are pending orders auto-submitted, is archive blocked, or are the orders cancelled or frozen?	OI-22. Lifecycle p.6: "Given the store is Closed and orders are in-flight, then those orders continue to process normally — no automatic cancellation or hold is applied."; Lifecycle p.7: "settings, products, roster, and orders are all visible but no field or action is editable"; Orders p.3: "orders that have been placed in the storefront but not yet approved by the rep and sent to the factory"; Lifecycle p.10: "Pending Orders count and any below-MOQ containers still open at close"	**Lifecycle, Orders**	*A) Closed: Pending Orders submission stays available. Archive: blocked while any order is pending, and the modal lists them (recommended). B) Archive auto-submits all pending orders, including any below-MOQ fees. C) Archive cancels and refunds pending orders.*	Paid orders could be stranded and never reach the factory, and archive behaviour is undefined for money already collected.	Open → master Q-10

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-4	**P1**	Gap	Which Settings fields lock once a store is launched? The spec marks the list TBD and says it "must be defined before build". Please also decide: re-binding to a different team after launch; Team Logo and Team Colors (Home Appendix A 8d says they don't lock and should be recorded here); switching the fulfillment method; switching Set window / Always open; changing Jersey Number Selection mode once orders exist; and whether the lock applies while the store is Closed, which Lifecycle and Settings Epic D call "fully editable".	OI-40, OI-39. Settings p.15: "OPEN — to be determined: the exact fields/inputs that lock after launch are TBD and must be defined before build (likely candidates touch fulfillment, tax, format/timeline, and the web address …)"; Settings p.16: "Whether re-binding the store to a different team should be permitted after launch is part of the TBD lock list"; Settings p.5: "switching the fulfillment method while still in draft"; Settings p.18: "Selecting a mode saves immediately"; Lifecycle p.6: "all content remains fully editable"	**Settings, Lifecycle**	*A) Lock after launch (in Open and Closed): Store Type, web address, fulfillment method, tax settings, Set window / Always open, Jersey Number Selection mode, and team re-bind. Logo and Colors stay editable, as do the five decided exceptions (recommended). B) Lock only while Open, and unlock everything while Closed. C) Provide a field-by-field table.*	The store-state permission layer can't be built. Live orders can be disrupted, for example by switching from Ship to Team Manager to Direct-to-Home mid-window.	Partly answered → master Q-11

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-5	**P1**	Conflict	How do per-team-code order windows and League repeating close dates relate to the single store-level status? When one team code's window ends, or a weekly close date arrives, does the whole store go Closed? If so, what re-opens it for the next period, given that Lifecycle allows only a manual re-open? Which "Active Order Window" does each Close Report cover? Is a "pop-up store" simply a store in Set window mode?	OI-38, OI-39. Settings p.17: "schedule at store level or per team code — a searchable, status-sorted table of team codes with start/end/timezone per row"; Settings p.18: "League stores can turn the single window into a repeating close cadence — Weekly, Every 2 weeks, Monthly, or End of season"; Lifecycle p.2: "Closed → Open … Manual only — rep clicks Re-open Store"; Lifecycle p.6: "Given a pop-up store with a configured close date/time, when that moment is reached, then the store automatically transitions to Closed"; Settings p.17: 'a Store Schedule toggle offers Set window vs. Always open'	**Settings, Lifecycle**	*A) "Pop-up" = Set window mode. Store status follows only the store-level window. Per-team-code windows gate ordering per team without changing store status. Each repeating close is a close event that auto-re-opens at the next period start, which is a new system transition (recommended; Lifecycle needs amending). B) The store auto-closes at the last team-code close date, and each cadence close needs a manual re-open. C) Remove repeating close dates from v1.*	The status state machine, auto-close job and Close Report scoping are all undefined for League stores.	Partly answered → master Q-12

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-6	**P1**	Conflict	Settings Epic H and Lifecycle disagree on the Store Close Report. Which spec is authoritative on these points? (1) Team managers: a separate scoped variant (Settings), or full parity including exports and the full order table (Lifecycle)? (2) Seen-state: per rep, or per user? (3) Blocking: does the report gate nothing, or must it be dismissed "before any other workspace content is actionable"? (4) Tone: "celebratory retrospective", or restrained? (5) Settings' OPEN items: the metric set (it still lists "profit"), and whether the manager version is emailed. Note also that the portal excludes orders, yet Lifecycle's detail layer is a full order table and its trigger is "workspace entry".	OI-34, OI-35, OI-36. Settings p.19: "a separate variant is generated for team managers … It excludes dealer profit and any figure outside that manager's scope."; Lifecycle p.11: "Team-manager role: full parity with the rep for this report — a team-manager-role user may view and export everything the report contains."; Settings p.26: "a seen/dismissed flag per rep"; Lifecycle p.9: "Seen state is per user."; Settings p.19: "It gates nothing and blocks no action."; Lifecycle p.11: "before any other workspace content is actionable"; Settings p.19: "a high-summary, celebratory retrospective"; Lifecycle p.11: "Celebratory framing is suppressed wherever the data does not support it."; Settings p.19: "OPEN — to be confirmed: the exact metric set … total raised, orders and units, roster participation, and profit … whether the manager version is emailed on close"; Settings p.10: "Reporting and Rosters (no products, orders, settings, or vault)"	**Settings, Lifecycle**	*A) Lifecycle is authoritative for the rep version, and for seen-state (per user per close event, which confirms Home Q-2) and blocking. Team managers get a scoped variant in the portal's Reporting area: no order-level detail, no dealer figures, auto-presented on their first portal entry, not emailed (recommended). Settings Epic H is then rewritten to reference Lifecycle. B) Full parity for team managers (Lifecycle), with portal scope widened to include orders.*	Two incompatible report builds and permission models. There's a risk of data exposure, with team managers seeing dealer figures or buyer order data.	Open → master Q-13

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-7	**P2**	Gap	What is the QX7 entitlement contract (endpoint, caching/refresh, behaviour when QX7 is unreachable as opposed to returning zero brands)? Is the SOURCE pill selection remembered per session, per store or per rep? When a dealership loses a brand, what happens to items staged but not yet committed from that brand, and to that brand's products already live in a store?	OI-15. Product p.3: "their prior selection is visible but not pre-committed and they must explicitly re-select"; Product p.3: "any already-staged items remain staged and unaffected"; Product p.1: "opening a bookmarked customizer link for a brand the dealership has since lost access to"; Product p.2: "the SOURCE pill resolves against QX7"	**Product**	*A) The selection is session-scoped with no default for multi-brand reps. If QX7 is unreachable, show a retry state that is distinct from zero entitlements. Staged items from a lost brand are blocked at commit with a reason. Live products stay purchasable until a Prolook admin delists them (recommended). B) The selection persists per store, and lost-brand products are hidden from the storefront automatically.*	Licensing exposure (the problem this spec exists to fix) remains for staged and live items, and the entitlement service can't be built.	Open → master Q-40
Q-8	**P2**	Gap	What is the Customizer 3.0 integration contract? What payload goes in (team name, colors, logos) and what staged-item payload comes back? What happens on cancel, abandon or failure? What is pre-populated when the store has no logo, and in League stores with division colors?	OI-13. Product p.5: "Requires integration with the external 'Customizer 3.0' design tool (referenced but outside these files)"; Product p.4: "C1 — The customizer auto-populates Team Name, Team Colors, and Logos from the store's branding when opened from this flow."; Product p.3: "when they return from the customizer, then the item is staged as a custom product"	**Product**	*A) Hand-off via a return URL carrying a saved-design ID, which the store fetches. Abandoning or failing stages nothing and returns the rep to Add Products. Missing branding fields are left blank. Store-level colors are always used (recommended). B) The Customizer team supplies the API spec.*	The hand-off and return can't be built or tested, and failure paths are undefined.	Open → master Q-41

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-9	**P2**	Conflict	Which launch flow is authoritative? Launch specifies a confirmation modal, a success modal, an email to players and the team manager, and an onboarding-milestone event. Lifecycle, the self-declared single source of truth, says Open "immediately", with none of these. Launch also says "Status changes confirm with toasts", while Lifecycle needs a modal for Close and none for Re-open. And is Create Template in the header store menu (Launch), on the Store Status card (Settings), or both, and is it available before launch?	OI-5, OI-6, OI-37. Launch p.2: 'a "Launch Team Store" modal confirms the consequences'; Launch p.2: '"Your store is now live!" success modal offers View Store or Stay In Editor'; Lifecycle p.5: "when the rep clicks Launch Store, then the store transitions to Open immediately"; Launch p.2: "Status changes confirm with toasts"; Lifecycle p.6: "requires no confirmation modal"; Launch p.2: "a store menu whose single option, Create Template"; Settings p.17: "Create Template: the same card carries Create Template"	**Launch, Lifecycle, Settings**	*A) Launch follows the Launch spec: confirm modal → Open → success modal + email + milestone, with Lifecycle amended to reference it. Close = confirmation modal + toast; Re-open = toast only. Create Template appears in both places, after launch only (recommended). B) Lifecycle wins and the launch modals are dropped.*	The launch UI, notification send and status feedback differ by spec, and QA can't write acceptance tests.	Partly answered → master Q-42
Q-10	**P2**	Ambiguous	What exactly counts toward the "at least one product added" launch gate? Does a custom item staged but not yet committed count? Does a committed product whose per-item visibility toggle is off count?	OI-16. Launch p.1: '"Add at least one product to launch your store."'; Launch p.2: "The launch gate reads the store's catalog count (≥1 product added)"; Launch p.2: '"published" is no longer a valid term, having been replaced by the per-item visibility toggle'; Product p.3: "the item is staged as a custom product"	**Launch, Product**	*A) Only committed catalog items count, regardless of visibility (recommended). B) Only committed and visible items count, so a store can't launch with nothing to buy.*	The gate query is undefined, and a store could go live with an empty storefront.	Contradicted → master Q-43

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-11	**P2**	Gap	Who exactly receives the launch email? Does "the team manager" mean the primary manager record only, all manager records, or invited portal users? What happens to players without an email (phone-only, Roster Q-11)? Does a re-open re-notify anyone? What is the email template? This also needs reconciling with Settings, where manager records "send no email".	OI-54. Launch p.2: "all players and the team manager receive an email that the store was created and can purchase team goods"; Launch p.2: "confirming launch triggers a notification send to all rostered players and the team manager"; Settings p.9: "Importing a coach creates a contact record only. It provisions no account, sends no email, and grants no portal access."	**Launch, Settings**	*A) The email goes to every rostered player with a Contact Email and to the primary manager record, with no portal access implied. Phone-only players are skipped and listed to the rep. Re-open sends nothing. Copy is owned by System Emails (recommended). B) The email goes to all manager records. C) The email goes to invited portal users only.*	Wrong or missing recipients at go-live, and possible conflict with the "import grants nothing" rule.	Open → master Q-44
Q-12	**P2**	Conflict	Where do Archived stores appear? Launch says in an "Archived Stores section of the Account page". Lifecycle says only that they're removed from the list, yet promises a read-only workspace and on-demand Close Reports with no defined entry point. Is the Account-page section in scope, and who specifies it?	OI-4. Launch p.2: "archived stores are excluded from the directory and their cards appear only in the Archived Stores section of the Account page"; Lifecycle p.7: "Given the store is Archived, when the rep views the Stores tab, then the store no longer appears in the list."; Lifecycle p.7: "accessible in the read-only workspace"	**Launch, Lifecycle**	*A) An Archived Stores section on the Account page is in scope, with its own spec, and is the only entry into archived workspaces (recommended). B) There is no archived list. Archived stores are reachable only by direct link or through support.*	Reps can't reach the read-only archived record that Lifecycle promises to retain.	Open → master Q-45

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-13	**P2**	Conflict	What does the Epic E "update to match roster" rewrite? The snapshot includes size and, on Direct-to-Home stores, the shipping address, but the Roster schema has no Size field (Roster Q-10), and Roster Epic 3 says nothing writes an address onto a placed order. Orders says personalization "carries no price", but size can change the price (for example, a 2XL upcharge). Does the update rewrite number, name, size and address, or a subset? Roster Q-19 asked this; Orders only partly answers it.	OI-17. Orders p.1: "Jersey number, name on jersey, size, and — on Direct-to-Home stores — the shipping address are written onto the line when the order is placed"; Orders p.5: "that single order line's snapshot is rewritten from the player's current roster values"; Orders p.5: "Personalization carries no price, so an update never alters the line total"	**Orders**	*A) The update rewrites only Jersey Number and Name on Jersey. Size and address are excluded because they can affect price or fulfillment (recommended). B) It rewrites all snapshotted fields, Size is added to the roster schema, and size is confirmed price-neutral.*	The update endpoint's scope is undefined, and it could silently change price or shipping on a paid order.	Partly answered → master Q-30
Q-14	**P2**	Gap	Should Epic E updates be recorded in an order amendment history? The spec leaves this OPEN and says it "should be settled before build". If yes, what is recorded and who can see it?	OI-19. Orders p.5: "OPEN — to be confirmed: whether an update is recorded against the order for support purposes … Recommend a minimal record — what changed, when, and by whom"; Orders p.7: "Whether the amendment is recorded in an order history is an open dependency (Epic E) and should be settled before build, since no amendment history exists today."	**Orders**	*A) Yes. Store a minimal amendment record (field, old value, new value, user, timestamp), visible in the order detail drawer and to support (recommended). B) No history in v1.*	The data model can't be finalised, and parent disputes can't be resolved.	Open → master Q-46
Q-15	**P2**	Conflict	Which orders does All Orders contain? Epic A says "the rep's own orders and fan orders", with My Order and Fan badges only. But the problem statement names three sources, including player team-gear orders, and the Close Report has an "order origin badge". Where do submitted player orders appear, and with what badge?	OI-20. Orders p.1: "orders coming from three directions — their own rep-placed orders, individual player orders for team-required/supplied gear, and fan orders"; Orders p.3: "consolidating the rep's own orders and fan orders into one view, with each row badged by origin (My Order / Fan)"; Lifecycle p.10: "WebOrder #, Factory Order #, order origin badge"	**Orders, Lifecycle**	*A) All Orders includes all three origins, badged My Order, Player and Fan (recommended). B) Player orders appear only in My Team(s) drawers and Pending Orders.*	Submitted player orders may have no list view, and the CSV export, KPIs and Close Report may disagree.	Open → master Q-47

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-16	**P2**	Gap	Can a rep reject, cancel or refund a pending storefront order before submission? Pending orders are "not yet approved by the rep", but no reject or cancel action is specified, although Reports and the Close Report net out refunds and cancellations. Who can cancel, and does cancelling refund the buyer and release the item's commercial lock?	OI-29. Orders p.3: "not yet approved by the rep and sent to the factory"; Lifecycle p.10: "a refunds / cancellations summary"; Settings p.15: "If every order against an exempted item is later cancelled, its commercial lock releases"	**Orders, Lifecycle, Settings**	*A) Add Cancel order (pending only, rep only) with an automatic refund to the buyer. Post-submission cancellations go through support (recommended). B) No cancellation in the Orders tab in v1. All cancellations go through support.*	Refund and cancellation flows, and the netted figures that depend on them, have no source.	Open → master Q-48
Q-17	**P2**	Gap	Where do MOQ thresholds and the Minimum Quantity Fee come from: per manufacturer, per product, or per container? What is the fee formula? How is a container with several manufacturers handled? And what data source does "confirms billing" in the review modal use?	OI-21. Orders p.1: "most manufacturers enforce minimum order quantities (MOQs)"; Orders p.6: "Pending submission needs MOQ thresholds and minimum-quantity fee calculation per shipping container"; Orders p.3: "a minimum-quantity progress ring with the % to MOQ and an info tooltip stating the fee"; Orders p.3: "enters payment as a PO Number, confirms billing"	**Orders**	*A) MOQ and fee are configured per manufacturer, with progress computed per manufacturer within a container and a fee of $X per missing unit. Billing defaults from the dealership account (product to supply the values). B) A single platform-wide MOQ and fee per container.*	The progress ring, fee itemization and review totals can't be calculated.	Open → master Q-49

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-18	**P2**	Conflict	Is there one freight-routing gate or two? Orders' "Assign Managers" modal collects managers inside the submit flow; Settings owns the Order Fulfillment Mapping. Does the modal write to the same Settings manager collection and mapping? In "league manager" mode, which manager record receives the freight: the primary, or a chosen one (Roster Q-15)? On a Single-Team Ship-to-Team-Manager store, is the gate the destination address?	OI-44. Orders p.4: "an Assign Managers modal blocks the flow — collecting the group manager, or a team manager for every unassigned roster, with address verification — and on completion automatically continues to the review modal"; Settings p.13: "incomplete manager assignments — or a missing destination address on an assigned manager — block pending-order submission"; Settings p.13: "each division routes to the league manager, a single division manager, or individual team managers"; Settings p.13: "Order Fulfillment Mapping. Shown only for League stores whose fulfillment method is Ship to Team Manager."	**Orders, Settings**	*A) There is one gate predicate, owned by Settings. The Orders modal is a shortcut that writes the same manager collection and mapping. "League manager" = the primary record. Single-Team gate = "verified destination address exists". Direct-to-Home has no gate (recommended; the last point answers Roster Q-14 part 2). B) Two separate gates and records.*	Submission could be blocked in one place and allowed in another, and freight could ship to the wrong person.	Partly answered → master Q-34
Q-19	**P2**	Ambiguous	What is the canonical order/production status list? The order drawer stepper, the Close Report production-stage mix and the "Order Status Guide" each name stages differently.	OI-23. Orders p.4: "a production-stage stepper (Submit Date → Order Confirmed → production stages → Delivery)"; Lifecycle p.10: "the production-stage mix (Order placed → Confirmed → Artwork → Factory production → Shipped → Delivered)"; Orders p.3: "An Order Status Guide explains each lifecycle stage"	**Orders, Lifecycle**	*A) Adopt the Lifecycle list (Order placed, Confirmed, Artwork, Factory production, Shipped, Delivered) plus Cancelled and Refunded as the single enum, used by the stepper, the guide and reports (recommended). B) Supply the factory's status enum.*	The stepper, filters, CSV and Close Report can't agree on statuses.	Open → master Q-50

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-20	**P2**	Gap	What is the role model for non-rep users? Orders and Reports name only the rep. Lifecycle has "team-manager-role" users entering the workspace. Settings hides the Danger Zone from "manager-role users", which implies they can see Settings, while portal invitees get only "Reporting and Rosters". Is a workspace manager role distinct from portal invitees and co-managing reps? For each role, which of Orders (view, submit pending, Epic E update), Reports (KPIs, Fundraising PDF) and Settings can they see? This relates to Home Q-8 and Roster Q-6.	OI-24, OI-32, OI-45. Orders p.2: "The store manager (rep) viewing and managing all orders"; Reports p.1: "The store manager (rep) reviewing performance"; Lifecycle p.9: "A rep and an invited team-manager-role user each see the auto-trigger once"; Settings p.16: "(hidden for manager-role users)"; Settings p.10: "exactly two areas — Reporting and Rosters (no products, orders, settings, or vault) — scoped to this store only"	**Orders, Reports, Lifecycle, Settings**	*A) There are two roles. A rep (owner or co-managing) has the full workspace. A team-manager invitee has the portal only: Reporting (scoped KPIs and Close Report variant, no Fundraising PDF) and Rosters, with no Orders or Settings. "Manager-role" in Settings means co-managing reps (recommended; this also answers Home Q-8 as "no Home in portal"). B) Provide a full permission matrix.*	Authorization can't be implemented consistently, with a risk that team managers see orders or dealer data.	Partly answered → master Q-5

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-21	**P2**	Ambiguous	Please define each Reports KPI. Does "Orders — closed sales" mean submitted or all placed? "Pending — active orders currently processing" contradicts Orders' definition of Pending (not yet sent to the factory). Does Total Revenue include pending orders, and how are refunds and cancellations netted? Is Avg. Order Value "per order" or "per session"? What period is the card value itself: all-time or the current month? Is the trend "vs. last month" (Reports) or "vs. last period" (Close Report)? What are the Platform Fee and Card Processing Fee rates?	OI-27, OI-29. Reports p.2: "Card 2 · Orders — total volume count of closed sales"; Reports p.2: "Card 3 · Pending Orders — count of active orders currently processing"; Reports p.3: "average amount spent per order/session"; Reports p.2: "trend vs. last month"; Lifecycle p.10: "the vs.-last-period trend delta the KPI cards already use"; Lifecycle p.10: "Refunds and cancellations net out of revenue consistently with the Reports tab"; Reports p.4: "Platform Fees, Card Processing Fees"	**Reports, Lifecycle**	*A) Orders = all placed, non-cancelled orders. Pending = the Orders tab's Pending count. Revenue = gross buyer-paid minus refunds and cancellations, all-time for the store. AOV = revenue ÷ orders. The trend is month over month everywhere. Fee rates come from the payments config (recommended). B) Product to supply a definition for each card.*	The KPI cards, the Close Report reconciliation AC and the Orders deep-link counts will disagree.	Open → master Q-51

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-22	**P2**	Conflict	Lifecycle's Close Report still uses Team Profit and a boolean fundraising rule, but Reports has dropped both. Should the Close Report show the Team Revenue chart, not "Team Profit"? Should fundraising follow the three-state read, so it shows in the disabled-with-exemptions state? Reports p.2 also says the report shows when "any individual item" has fundraising enabled, which Settings A4 rules out unless the item is commercially locked. And should the Reports composition list the Close Report entry that Lifecycle places "at the top" and says Reports owns?	OI-25, OI-26, OI-28. Lifecycle p.10: "Plus the Team Profit chart for the window"; Lifecycle p.10: "the Team Profit trend"; Lifecycle p.10: "Net Fundraising (only when Team Fundraising is enabled; Avg. Order Value is promoted into this slot when it is disabled)"; Reports p.3: "Renamed from the Team Profit chart, September 1, 2026"; Reports p.2: "or when any individual item within the store has fundraising enabled"; Settings p.14: "A rep cannot enable fundraising on one item in a store where fundraising is off."; Reports p.2: "The page stacks three components, in order"; Lifecycle p.9: "A Store Close Report entry sits at the top of the Reports tab"	**Lifecycle, Reports, Settings**	*A) Replace Team Profit with Team Revenue throughout the Close Report and Settings Epic H. Gate fundraising everywhere on the three-state read, and fix the Reports p.2 wording to "commercially locked items still collecting". Add the Close Report entry as a fourth, top component of the Reports tab (recommended). B) Keep Team Profit for the Close Report only.*	The report would show a metric with no data source and hide fundraising money still arriving, and the Reports layout would omit a component it owns.	Partly answered → master Q-79

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-23	**P2**	Ambiguous	How is a store's "window" defined for always-open and re-opened stores? Does it start at launch, at the last re-open, or at the first order? The Close Report must reconcile with Reports "for the same window", but Reports KPI cards have no date range. What does "last period" mean for a close event? What does the Fundraising "This season (the store's open window)" preset select after several close/re-open cycles?	OI-11, OI-31. Lifecycle p.8: "every order placed during the store's Active Order Window (open date → close date)"; Lifecycle p.12: "every figure in the summary layer matches the corresponding figure on the Reports tab for the same window"; Lifecycle p.9: "Always-open (non-pop-up) stores: no scheduled close date exists"; Reports p.4: "This season (the store's open window), Last 7 days, Last 30 days, Year to date"	**Lifecycle, Reports**	*A) The window runs from the most recent transition into Open (launch or re-open) to the close event. "Last period" = the previous window, or none if this is the first. "This season" = the current or most recent window. Reconciliation is against Reports figures filtered to that window (recommended). B) The window is cumulative from launch.*	Report scoping, the reconciliation AC and the fundraising preset can't be implemented consistently.	Open → master Q-52
Q-24	**P2**	Ambiguous	Which orders count as "attributable to the team" for Team/League Revenue? Do fan orders and rep-placed orders count? In League stores, how are orders with no team selection attributed when filtering by team or division?	OI-27. Reports p.3: "Team revenue resolves to gross buyer spend on orders attributable to the team"; Reports p.5: "requires the order→team and team→division joins to be available to the analytics query"	**Reports**	*A) All non-cancelled orders on the store count. In League stores, orders with no team resolved appear as an "Unassigned" series and are excluded from team/division filters (recommended). B) Only player and team-gear orders count.*	The chart series and filters can't be defined, and the chart total may not match Total Revenue.	Open → master Q-53

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-25	**P2**	Conflict	How does the ship-to destination relate to the primary manager's address and to saved Pick-up Locations? Settings says it is "the same address held on the store's primary manager record", yet it can also be "a reference" to a saved Pick-up Location. Does selecting a location overwrite the primary manager's address? Does clearing the destination clear it, even though "every manager record carries an address"? Does re-designating the primary change the destination? Note: Settings verifies addresses "before [they are] accepted", which answers Home Q-11 (no saved address is unverified).	OI-43. Settings p.12: "the same address held on the store's primary manager record (Epic A2c) — not a third copy"; Settings p.12: "A selected location is held as a reference, not a copy"; Settings p.13: "Given the rep clears the destination address, when they save, then the save succeeds"; Settings p.12: "every manager record carries an address, used for order fulfillment routing"; Settings p.13: "an entered address is validated against the map service before it is accepted"	**Settings**	*A) The destination is its own store field. It defaults from the primary manager's address at creation and then holds either a typed address or a location reference. It never writes to, and isn't written by, manager records afterwards (recommended). B) It is truly one shared field: selecting a location rewrites the primary manager's address, and re-designating the primary moves the destination.*	Three surfaces write one field under conflicting rules, so freight or the point-of-contact address could change unintentionally.	Open → master Q-54
Q-26	**P2**	Conflict	Settings still calls the designated manager record "primary" ("primary record marked", "designate it primary"). Home Appendix A 8e requires the rep-facing term "Point of Contact" and says Settings must adopt it before Home ships. Which label is final?	OI-41. Settings p.7: "with the primary record marked"; Settings p.11: "when the rep designates it primary"; Home p.31 (Home Q-1): "Settings must adopt the same term, and Home must not ship ahead of it. See Appendix A, amendment 8e."	**Settings (+ Home ref)**	*A) The rep-facing label is "Point of Contact" everywhere, keeping "primary" only as the internal field name. Settings is amended accordingly, which closes part of Home Q-1 (recommended). B) Keep "primary", and amend Home.*	Home is blocked by its own rule, and the UI copy differs between tabs.	Contradicted → master Q-1

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-27	**P2**	Gap	In "Team manager chooses" jersey mode, what does a buyer see when their player has no assigned number? How are fans and non-rostered buyers handled? What happens to existing orders and assigned numbers if the mode is switched after orders exist?	OI-49. Settings p.18: "Team manager chooses on behalf of players (numbers assigned on the roster; buyers see their assigned number, no entry at checkout)"; Settings p.18: "Selecting a mode saves immediately with a confirmation toast"	**Settings**	*A) If no number is assigned, number entry is blocked with "Number not yet assigned — contact your team manager". Fans enter no number. The mode locks after the first order (see Q-4) (recommended). B) Fall back to buyer entry when no number is assigned.*	The PDP and checkout logic for unassigned players and fans is undefined.	Open → master Q-55
Q-28	**P2**	Gap	Settings marks these items OPEN and defers them to specs that aren't in this set: (1) the Announcement Message character limit and permitted rich-text marks, including links ("implementation-blocking"); (2) the Team Database coach schema (does it carry an address and a role/title?).	OI-47. Settings p.21: "Character limit and permitted marks — OPEN. A ceiling on message length and the permitted rich-text feature set (in particular whether links are allowed) are undecided and implementation-blocking"; Settings p.24: "The Team Database coach schema — specifically whether records carry a mailing address and a role or title — is an open dependency"	**Settings**	*A) Limit the message to 500 characters, allowing bold, italic, bulleted lists and https links only. The Team Database owner confirms the coach schema, and imported coaches without an address need one entered before they can be mapped (recommended). B) Plain text only in v1.*	The editor, sanitizer, storefront banner and coach-import mapping can't be built.	Open → master Q-56

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-29	**P2**	Conflict	Who can reverse an archive, and into which state? Lifecycle p.2 says "a managing rep" can restore it, but the transition table says "Support staff only". Does support restore the store to Open or to Closed?	OI-3. Lifecycle p.2: "Cannot be self-reversed — restoring an archived store can only be done by a managing rep."; Lifecycle p.3: "Not self-service. Requires a Prolook support request. Support staff only."; Lifecycle p.7: "no self-service reversal path exists in the product UI"	**Lifecycle**	*A) Support only. The store is always restored to Closed so the rep re-opens it deliberately, and the p.2 wording is corrected (recommended). B) Support restores the state requested in the ticket.*	The admin tooling and target state can't be specified, and the "managing rep" wording implies a self-service path.	Partly answered → master Q-80
Q-30	**P2**	Ambiguous	Who is the store "owner" allowed to archive? Lifecycle and Settings use "store owner", "owning rep" and "managing rep". If several reps manage a store, which one is the owner? Can ownership be transferred?	OI-12. Lifecycle p.2: "Owner only. Irreversible without a support request."; Lifecycle p.7: "when a rep who is not the owner opens the Detail tab, then the Archive Store action is not visible to them"; Settings p.16: "the rep who owns the store can archive it"	**Lifecycle, Settings**	*A) The owner is the rep who created the store, and ownership is transferable by a Prolook admin only. Other reps can close and re-open but not archive (recommended). B) Any rep with workspace access counts as an owner.*	The archive permission check can't be implemented.	Open → master Q-57

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-31	**P2**	Gap	How does the auto-close schedule interact with manual status changes and with timezones? (a) If a pop-up store is re-opened after its close date has passed, does auto-close fire again immediately, or must a new date be set first? (b) If the store is closed manually before its close date and then re-opened, does the original close date still apply? (c) If a store launches before its scheduled open date, is it Open but not orderable? (d) Which timezone governs the close moment?	OI-10. Lifecycle p.6: "they can re-open to Open from the Store Status card and optionally edit the store schedule"; Lifecycle p.3: ordering window while Closed: "Suspended — does not advance"; Lifecycle p.14: "100% of pop-up stores transition to Closed at their configured close date/time"; Settings p.17: "team codes with start/end/timezone per row"	**Lifecycle, Settings**	*A) (a) Re-opening with a past close date requires a new close date or a switch to Always open. (b) A future close date still applies. (c) Launching before the open date is allowed, and the storefront shows "Opens on [date]" until then. (d) The store-level timezone applies; team-code rows use their own (recommended).*	The auto-close job could re-close a store the rep just opened, and the scheduler logic can't be built.	Open → master Q-58
Q-32	**P2**	Ambiguous	Lifecycle's Dependencies section describes an application verification process (EIN, banking, admin review queue, 24–48 hr wait) that appears nowhere else in the spec. Is this pasted from another spec by mistake, or is there a verification gate before a store can launch?	OI-9. Lifecycle p.14: "Verification is a manual, asynchronous process — not an automated check. Requires: secure database storage for application submissions (business-entity fields incl. EIN and banking …) … Approval introduces a 24–48 hr waiting period between submission and access."	**Lifecycle**	*A) This is a copy-paste error. Remove it from Lifecycle; the launch gate is only "≥1 product" (recommended). B) A verification gate exists, and its spec, owner and position in the state machine must be supplied.*	If a gate is real, the state machine is missing a state. If not, engineers may build an unneeded EIN/banking pipeline.	Open → master Q-59

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-33	**P2**	Conflict	Is the Store Status card (Close/Re-open, Archive Danger Zone) on Settings → Schedule & Status, or on a "Detail" tab? Lifecycle uses a stale tab list (Detail, Products, Roster, Orders, Reports, with no Home or Settings, and Roster rather than My Team(s)) and a "Pause" label, while Launch and Settings use Settings → Schedule & Status and "Close Store".	OI-1, OI-2, OI-50. Lifecycle p.5: "all tabs (Detail, Products, Roster, Orders, Reports) are accessible"; Lifecycle p.5: "the rep opens the Store Status card on the Detail tab"; Lifecycle p.2: "rep clicks Pause on the Store Status card"; Lifecycle p.2: "store owner clicks Archive Store in the Danger Zone of the Detail tab"; Launch p.2: "the actionable pause/resume control lives on the Settings tab's Store Status card (Close Store / Re-open Store …)"; Settings p.7: "Store Status card → Close / Re-open Store (Epic D), the Create Template action, and the Danger Zone → Archive Store"	**Lifecycle, Launch, Settings**	*A) The card lives on Settings → Schedule & Status, with labels "Close Store" and "Re-open Store". Lifecycle is updated to the six-tab shell (Home, My Team(s), Products, Orders, Reports, Settings) (recommended). B) A separate Detail tab exists.*	Deep links, ACs and test cases point at a tab that doesn't exist in the "single source of truth".	Partly answered → master Q-81
Q-34	**P3**	Gap	Customize references "Governing rule 1" (the design lock on commit) and Product Catalog Management Epic A; Reports references Governing rule 3 (the commercial lock and the three-state fundraising read). None is in this set. What exactly does each lock cover? Is the sport/category card list fixed or sourced per brand, and what are the "gendered variants"?	OI-14, OI-33. Product p.4: "Custom items carry a permanent design lock on commit per Governing rule 1."; Product p.4: "(baseball, basketball, football, soccer, apparel, accessories, and gendered variants)"; Reports p.5: "matching the three-state read specified in Product Catalog Management, Governing rule 3"	**Product, Reports**	*A) Provide Product Catalog Management for review. Interim assumption: the design lock freezes design and artwork only, and the commercial lock freezes price and fundraising on items with a non-cancelled order. Cards are sourced per brand from the template catalog (recommended).*	The lock scope and the picker data source are undefined.	Partly answered → master Q-82

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-35	**P3**	Conflict	Is there a status chip in the workspace header, and what are its colors and vocabulary? Launch's post-launch header has only Preview Store plus a store menu. Lifecycle says the badge updates in the "workspace header" and fixes Closed as amber, which keeps the Home no-amber clash (Home Q-21) alive. Is the Overview KPI "Open Stores" or "Active Stores", and should "Active Order Window" and the "Active" invitee status be renamed, given that "Active" is a retired status name?	OI-8, OI-53. Launch p.2: "the LAUNCH STORE button is replaced by a Preview Store button … and a store menu"; Lifecycle p.6: "the status badge updates to Open in the store list, workspace header, and any KPI aggregations"; Lifecycle p.8: "Draft (blue), Open (green), Closed (amber)"; Lifecycle p.4: "Overview KPI — Open Stores count"; Lifecycle p.8: "Given the Active Stores KPI card on the Overview"; Launch p.2: "the live state was previously named Active"	**Launch, Lifecycle**	*A) The header carries a status chip (Draft blue, Open green, Closed amber), and Home echoes the status as plain text (Home Q-21 option A). The KPI is "Open Stores". "Active Order Window" stays, since it names a time range rather than a status (recommended). B) No header chip; status shows only on cards and in the Settings card.*	Header layout, Home's no-amber rule and the KPI label stay inconsistent.	Partly answered → master Q-61
Q-36	**P3**	Ambiguous	What does a buyer see at a Draft store's URL? Launch says Closed is "technically equivalent to a draft", but Lifecycle gives Closed a "This store is closed" page, a badge and a Close Report, and calls the Draft URL "inaccessible". Is Closed a distinct persisted state? Is a Draft URL a 404, the neutral closed screen, or a login wall?	OI-7. Launch p.2: "Closed suspends ordering (technically equivalent to a draft)"; Lifecycle p.3: "Not live — storefront URL is inaccessible to buyers"; Lifecycle p.7: 'a neutral "This store is currently closed" screen'	**Launch, Lifecycle**	*A) Closed is a distinct persisted state. Draft URLs serve the same neutral closed screen, so nothing is leaked, and the "equivalent to a draft" wording is removed (recommended). B) Draft URLs return 404.*	The storefront routing for Draft is untestable, and the status persistence model is unclear.	Open → master Q-83

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-37	**P3**	Ambiguous	Orders, Settings, Reports and the Scheduler use different names for the container hierarchy: "roster group / standalone roster", "division / standalone team", and "team code". Is a roster group the same as a division? Are containers keyed by division ID or by team code?	OI-44. Orders p.3: "League stores render one container per roster group plus one per standalone roster; Single-Team stores get a single container"; Settings p.13: "maps a freight recipient to every shipping container"; Settings p.18: "This scheduler is keyed per team code."; Reports p.2: "filterable by team or division"	**Orders, Settings, Reports**	*A) Roster group = division and standalone roster = standalone team. Containers are keyed by division/standalone-team ID, and team codes are display identifiers (recommended).*	Container, mapping and scheduler joins could use different keys.	Open → master Q-33
Q-38	**P3**	Gap	Will the Team Revenue chart have a Day / Month / Year granularity toggle and a highlighted current-period bar (OPEN)? What is its default time bucket?	OI-30. Reports p.2: "OPEN — to be confirmed: whether the Team Revenue chart carries a Day / Month / Year granularity toggle and a highlighted current-period bar"	**Reports**	*A) Yes, matching the Overview's graph cards, defaulting to Month (recommended). B) Monthly bars only.*	The chart's design and query shape are unsettled.	Open → master Q-84
Q-39	**P3**	Gap	Settings still lists two OPEN items. (1) Should there be an "Add from Team Database" action on the manager card? Home Appendix A 8b already declares this "closes as yes". (2) Should the theme color picker warn about, or block, low-contrast colors?	OI-42, OI-47. Settings p.9: 'OPEN — to be confirmed: whether this re-fetch should be surfaced on the League/Team Manager Information card as well (e.g. an "Add from Team Database" action …). Recommend yes'; Settings p.20: "Contrast — OPEN. Whether the picker warns or blocks on a color with insufficient contrast"	**Settings**	*A) Close (1) as yes in Settings to match Home. Contrast is a warning, not a block (recommended).*	The owning spec stays open on items another spec treats as decided.	Partly answered → master Q-85
Q-40	**P3**	Ambiguous	What does "total raised" on the Active Order Window card mean: fundraising collected, net fundraising, or gross revenue? Dependencies say "order revenue raised". Home Q-27 also proposes showing "total raised".	OI-52. Settings p.17: "Total raised: the card shows the total $ amount raised during the window"; Reports p.4: "Fundraising Collected, Platform Fees, Card Processing Fees, and the bolded Net Fundraising total"	**Settings, Reports**	*A) Fundraising Collected for the current window. When fundraising is off, show Total Revenue relabelled "Total sales" (recommended). B) Gross revenue.*	The figure is ambiguous on two surfaces (Settings and Home).	Open → master Q-64

ID	Priority	Type	Question	Source / quoted text	Spec	Options / suggested answer	Impact if unanswered	Status (8-spec review)
Q-41	**P3**	Gap	Store Home relies on thresholds it says Settings publishes, but Settings doesn't define them. Epic E defines only the 7-day urgent pill, with no 14-day C-15 lead (Home Q-3), and Epic A2b defines no "not logged in" staleness threshold (Home Q-25). Which spec owns these values?	OI-40. Settings p.17: 'a "days left" pill that turns urgent (red) inside the final 7 days'; Settings p.11: "Status is either Active (green dot, with Last login when known) or Invited · not logged in (amber dot)"	**Settings**	*A) Add both values (14-day C-15 lead, 7-day invite staleness) to Settings Epic E and A2b as published constants (recommended). B) Home owns them.*	Home's C-15 and C-24 cards have no authoritative threshold.	Contradicted → master Q-2
Q-42	**P3**	Gap	A store archived directly from Open never gets a Close Report, because archiving "does not generate" one and a close event is only a transition into Closed. Is that intended?	OI-46. Settings p.19: "Archiving: archiving (Epic C) does not generate or regenerate a report."; Lifecycle p.8: "A close event is any transition into Closed"	**Settings, Lifecycle**	*A) Intended. The archive confirmation warns that no Close Report will be produced and offers "Close first" (recommended). B) Archive from Open generates a Close Report.*	A season's results could be lost when reps archive straight from Open.	Open → master Q-86
Q-43	**P3**	Gap	The Allow Duplicate Numbers bulk apply overwrites every roster, including overrides, which answers the first half of Roster Q-20. Is there a confirmation showing how many rosters will change? When switching to "disallow", what happens to rosters that already hold duplicates?	OI-48. Settings p.18: "setting it writes the value to every roster in the store, and each roster may then override it"; Roster Q-20, Q-33	**Settings (+ Roster ref)**	*A) Show a confirmation listing the overridden rosters that will be reset. Existing duplicates are grandfathered and flagged, never auto-cleared (recommended).*	A bulk change could silently reset per-division choices, and duplicate handling is unclear.	Partly answered → master Q-78
Q-44	**P3**	Gap	What fundraising toggle state do items added while the store-level flag is off get, and what do they return to after a store-level re-enable (they have no prior state to restore)?	OI-51. Settings p.13: "New items added after this point default their toggle to" on (while enabled); Settings p.14: "every item returns to the enabled/disabled state it held immediately before the disable"	**Settings**	*A) Items added while the flag is off are stored with the toggle on and come back on when fundraising is re-enabled (recommended). B) They come back off.*	Re-enable behaviour is undefined for new items.	Open → master Q-87
