Clarification Questions — Customize New Product

Sources: TS-Customize New Product-161026-094448.pdf (CNP); cross-checked against TS-Store Settings (Settings Tab)-161026-094514.pdf (Settings), TS-Store Home (Home Tab)-161026-011919.pdf (Home), TS-Roster Management (My Team(s) Tab)-161026-092450.pdf (Roster), TS-Store Status & Lifecycle-161026-094525.pdf (Lifecycle), TS-Launch & Status Controls-161026-094523.pdf (Launch), TS-Order Management (Orders Tab)-161026-094455.pdf (Orders), TS-Store Analytics (Reports Tab)-161026-094501.pdf (Reports) · Total: 26 (P1 5 · P2 12 · P3 9)

Every summary open item OI-1 to OI-24 appears in the Source column of at least one question. Rows marked "consolidator finding" were not raised in the summary.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Gap	What is the QX7 entitlement contract, and how should the page behave when QX7 is slow, down or returns an error (as opposed to returning zero brands)?	OI-4. CNP Solution: "One brand context, resolved from QX7"; A1: "The brand list is entitlement-filtered from QX7... the count varies per user"; A7: "Where QX7 returns no brands, the pill and the Customizer chip render an explicit state"	Provide endpoint, auth, response fields (brand ID, name, brand type), and cache/refresh rule. For failures, suggest: A) a distinct "Brands unavailable, retry" state on the pill and Customizer chip, with the other three chips working (recommended). B) Treat it like zero entitlements (A7). Suggest re-checking entitlement on every customizer launch and not relying on a client cache	The pill, the Customizer chip and the A5 server check can't be built, and a QX7 outage would be shown to reps as "no entitlements"
Q-2	P1	Conflict	Do single-brand reps skip only the brand picker, or also the sport/category picker?	OI-1. CNP A2: "Customize New Product opens that brand's customizer with no intermediate step"; User story 1: "land straight in that brand's customizer"; vs B1: "Selecting Customize New Product opens a grid of sport/category cards" and AC Picker #2: "when the rep selects a sport/category card, then they are handed off to that brand's customizer"	A) Single-brand reps skip only the brand picker and still see the sport/category grid (recommended, since the template comes from the card). B) They go straight into the customizer with no template, and pick sport/category inside Customizer 3.0	The core flow and the "hand-off completion" metric are built differently for the most common rep

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Gap	Where is the A5 entitlement check enforced (our backend, Customizer 3.0, or both), and which routes does it cover?	Consolidator finding, related to OI-4 and OI-10. CNP A5: "Direct navigation to a brand's customizer or catalog the dealership is not currently entitled to is blocked server-side... Enforcement must ship with the UI change, not after"; Dependencies: "the external 'Customizer 3.0' design tool (referenced but outside these files)"	A) Our backend checks QX7 before issuing a signed, short-lived customizer launch token, and Customizer 3.0 rejects launches without a valid token (recommended). B) Customizer 3.0 calls QX7 itself. C) Both. Also list the covered routes: customizer launch, template catalog, saved designs/carts, staging/commit APIs	A5 is a ship gate. If the external tool's URL is reachable directly, hiding the UI does not meet A5
Q-4	P1	Conflict	When does a custom item's design lock: on commit from Add Products, or when it gets its first non-cancelled order? Is the lock permanent, or does it release if every order is cancelled?	OI-15, OI-12. CNP C2: "configured through the standard per-item configuration modal (Product Catalog Management, Epic A), where design is changeable for the last time. Custom items carry a permanent design lock on commit per Governing rule 1"; vs Settings Epic A4: "An item carrying a non-cancelled order has its fundraising toggle locked along with the rest of its commercial fields (Products Tab, Governing rule 1)" and "If every order against an exempted item is later cancelled, its commercial lock releases"; Reports Epic D: "the commercial lock outranks the store-level disable: an item carrying a non-cancelled order keeps collecting"	A) Two separate locks: a permanent design lock on commit (new rule) plus the existing releasable commercial lock on orders. B) The design lock is the commercial lock, so it starts at the first order and is releasable, and C2 wording is corrected. C) The design lock starts at commit and never releases. Also provide Product Catalog Management (Governing rule 1, Epic A) and define "commit" (the Add Products page save, or store launch)	The lock can't be implemented, and a rep could be locked out of fixing a design on an item nobody has bought yet

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P1	Gap	What is the Customizer 3.0 hand-off and return contract, including cancel and error paths?	OI-10. CNP Dependencies: "Requires integration with the external 'Customizer 3.0' design tool (referenced but outside these files) and a catalog of sport/category templates"; C1: "auto-populates Team Name, Team Colors, and Logos"; C2: "The finished item returns staged as a custom product"	Provide: launch parameters (brand, template ID, store ID, branding payload, auth token); same tab or new window (suggest same tab with a return URL); return payload (design ID, preview image, base SKU, base price, decoration data); cancel/abandon behavior (suggest return to the sport/category grid with nothing staged); error/timeout behavior	The integration can't start, and abandoned designs could leave half-staged items
Q-6	P2	Ambiguous	Whose "saved designs and saved carts" appear under the Customizer chip, and which system are they read from?	OI-13. CNP Solution: "it scopes which saved designs and saved carts appear under the Customizer source chip"; AC Scope #1: "only that brand's saved designs and saved carts are returned"	A) The acting rep's own saves in Customizer 3.0, filtered by brand. B) All saves in the rep's dealership for that brand. C) Saves tied to this store/team only. Suggest A plus a source/owner label	The query and its access rules can't be built
Q-7	P2	Ambiguous	Which roles may use Customize New Product, and is entitlement read from the acting rep's dealership or the store's owning dealership?	OI-24. CNP persona: "Reps adding new custom products to a store"; A1: "brands the rep's dealership is entitled to sell. There is no fixed brand list; the count varies per user"; vs Roster: "store managers (reps, team managers, league directors)"; Settings Epic A2b: team-manager portal has "Reporting and Rosters (no products, orders, settings, or vault)"; Home: "Given two reps co-manage a store, then each sees only their own trail"	A) Reps only. Entitlement comes from the store's owning dealership, so all co-managers see the same brands (recommended). B) Reps only, with entitlement from the acting rep's own dealership (brands can differ between co-managers). Confirm whether "varies per user" means per rep or per dealership	Co-managing reps may see different brands, and the A5 check may be keyed to the wrong account

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-8	P2	Gap	For a multi-brand rep, what is the pill's initial state, and does the selection persist (per session, per store, per rep) and carry over between Step 2 and the Products tab?	OI-3. CNP AC Brand resolution #3: "when the rep clicks Customize New Product before resolving the pill"; A6: "The rep can reopen the picker and choose a different entitled brand at any point. The prior selection is visible but not pre-committed"	A) Start unresolved on every page load, with no persistence. B) Remember the last brand per rep per store and pre-resolve it, re-validated against QX7 (recommended). C) Remember it for the browser session only	Pill state storage and load behavior can't be designed
Q-9	P2	Ambiguous	Is a licensed brand from QX7 the same thing as a "third-party vendor" in Settings, and must a brand pass both QX7 entitlement and the store's seller scope/art policy?	OI-22. CNP A3: "Brand type (owned/manufactured vs. licensed) is shown where QX7 exposes it"; User story: "I want it to appear alongside owned and manufactured brands"; vs Settings: "Catalog & Decoration (only when a third-party vendor is enabled for the store)" and "Seller scope + art policy"	A) Unrelated: QX7 alone governs Customize, and seller scope covers vendor catalogs only. B) A licensed brand counts as a third-party vendor, so adding one turns on Catalog & Decoration and its art policy also applies. Confirm which	Licensed custom items may skip, or wrongly trigger, art-policy and seller-scope rules
Q-10	P2	Conflict	Should brand entitlement also be checked when custom products come in through Other stores, Catalog Templates or Create Template?	OI-23. CNP A4: "Stock Vault, Catalog Templates, and Other stores are not brand-scoped and are unaffected by it"; vs CNP Problem: "a rep could list product from a brand their dealership is not authorized to sell"; A5: "Hiding the UI affordance is not sufficient"; Launch: "a store menu whose single option, Create Template, spins a reusable store template off this store"	A) Yes: block or flag any imported custom item whose brand isn't currently entitled, server-side (recommended). B) No: A4 stands, and the licensing risk is accepted for copy paths	Non-entitled brands can still reach a store by copying, which defeats A5

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-11	P2	Gap	What happens when a brand's entitlement is removed while the pill is resolved to it, or after items of that brand are staged or committed?	OI-5. CNP scenario: "opening a bookmarked customizer link for a brand the dealership has since lost access to"; A6: "already-staged items are unaffected"; A5 covers only "Direct navigation"	Staged: A) Block commit with a message naming the item (recommended). B) Remove them. C) Allow commit. Pill: reset to unresolved on next QX7 check. Committed/live: A) Stay live but can't be re-customized or duplicated (recommended). B) Get hidden	Staging/commit validation and catalog policy are undefined
Q-12	P2	Gap	When one store carries several brands, are MOQ thresholds, fees and pending-order containers split by brand/manufacturer?	OI-21. CNP User story: "switch to a different entitled brand mid-session... so that building a multi-brand catalog isn't a start-over"; vs Orders: "most manufacturers enforce minimum order quantities (MOQs)" and "Pending orders are grouped into containers that mirror the store's roster architecture"	A) Containers stay per roster group, with MOQ evaluated per brand inside each container (recommended). B) Containers split by brand. C) MOQ ignores brand	MOQ fee calculation and submission grouping are wrong for multi-brand stores
Q-13	P2	Gap	Is the My Team(s) "Add New Product" a third entry point that must follow A1–A7? Is a product created there auto-assigned to the launching team/division?	OI-18. CNP A8: "Step 2 of store creation and the Products tab of an existing store enforce A1–A7 the same way"; vs Roster: "The tab carries an Add Products split menu — Add New Product (hands off to the existing add-product flow) and Add from Catalog" and "assigned to the launching scope — the team or division whose + or Add Products opened the drawer"	A) Yes, it is a third entry point with identical A1–A7 behavior, and the new product is auto-assigned to the launching team/division (recommended). B) It opens the Products tab flow, and assignment is manual afterwards	Brand enforcement could be skipped on one path, and team assignment behavior is undefined

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-14	P2	Gap	Where do the sport/category cards come from, what does each card show, what are the "gendered variants", and what is shown when a brand has no templates?	OI-9. CNP B1: "a grid of sport/category cards (baseball, basketball, football, soccer, apparel, accessories, and gendered variants)"; B2: "only templates belonging to that brand appear"	Suggest: cards come from the Customizer 3.0 template catalog per brand (not a fixed list); each card shows image, name and gender (Men's/Women's/Youth?); categories with no templates are hidden; a brand with no templates shows an empty state suggesting another brand	The picker can't be built
Q-15	P2	Conflict	Which branding is pre-filled into the customizer: store Team Logo/Colors, the team's artwork library, the Store Theme Color or a division's colors? What happens when branding is missing, and do customizer edits write back?	OI-16, OI-11. CNP C1: "auto-populates Team Name, Team Colors, and Logos from the store's branding"; vs Home Epic G: "Team artwork library — primary, wordmark, alternates, sport variants, each with a production-readiness state", "read by both the Artwork Editor and the brand customizer"; Settings: store-level "Team Logo, Team Colors" plus a separate Store Theme Color (Epic I); Roster: "divisions are created with a name and brand color"	Suggest: Team Name and Team Colors from the store; logos from the team artwork library, production-ready marks only, primary pre-selected; in League stores launched from a division/team, use that scope's colors; missing fields are left blank (no block); no write-back to store or team	Wrong or unusable marks could reach the factory, and pre-fill logic can't be built
Q-16	P2	Gap	Where are staged custom items stored, and do they survive the rep leaving the page or the session before commit?	OI-12. CNP C2: "The finished item returns staged as a custom product"; AC Switching: "any already-staged items remain staged and unaffected"; "commit" is not defined in CNP	A) Persist staged items server-side on the draft store until committed or discarded (recommended). B) Client-only for the page session (lost on leave, with a warning)	Designs could be lost, and the commit API can't be designed

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-17	P2	Ambiguous	Does a staged (not yet committed) custom item count toward the launch gate, and does a committed custom product need the visibility/render gate before buyers see it?	OI-20. CNP C2: "staged as a custom product"; vs Launch: "Given a draft store with zero products in its catalog... LAUNCH STORE is disabled with the tooltip 'Add at least one product to launch your store.'"; Home C-09/C-16: "≥1 visible product"	A) Only committed products count, and committed custom products follow the same render/visibility gate as other products (recommended). B) Staged items count too	The launch gate and Home setup cards may disagree about whether a store has products
Q-18	P3	Conflict	Which store-creation step hosts Add Products in League stores?	OI-17. CNP persona: "during store creation (Step 2 – Products)"; vs Roster: "Step 2 — Divisions & Teams (League Stores)" and "the store has no catalog until the Add Products step that follows"; Home: "The Add Products page is identical at Step 2 and on the Products tab"	Suggest: single-team = Step 2 Products; League = Step 3 Products. Refer to the step by name, not number, in A8	Routing, deep links and A8 test cases point at the wrong step
Q-19	P3	Ambiguous	When a multi-brand rep clicks Customize New Product with the pill unresolved, what happens?	OI-2. CNP AC Brand resolution #3: "they are required to choose a brand before a customizer opens"; A3: "the rep must resolve the pill before Customize New Product will open a customizer"	A) The Choose a brand picker opens automatically and continues to the sport/category grid after selection (recommended). B) The button is disabled with a tooltip. C) An inline prompt points at the pill	UI behavior differs between implementations
Q-20	P3	Ambiguous	Is the pill's Change link hidden for single-brand reps?	Consolidator finding. CNP A1: "The pill's Change link opens a Choose a brand picker"; vs A2: "Single-entitlement reps never see the picker"	A) Hide the Change link and show the brand as static text (recommended). B) Show it, opening a picker with one brand	Minor UI inconsistency with A2
Q-21	P3	Ambiguous	How is brand type shown in the picker, and are "owned" and "manufactured" one type or two?	OI-8. CNP A3: "Brand type (owned/manufactured vs. licensed) is shown where QX7 exposes it"	A) Two labels: "Owned/Manufactured" and "Licensed" (recommended), with no label when QX7 sends no type. B) Three labels. Also confirm the sort order (suggest alphabetical) and the QX7 field name	Picker labels and sorting are guessed

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-22	P3	Gap	What does the access-denied response look like (HTTP status, UI page copy), and should denied attempts be logged?	OI-6. CNP User story: "I want a clear access-denied message rather than a silent failure, so that I understand why a link that used to work no longer does"; A5: "returns an access-denied response, not data"	Suggest: HTTP 403; a page saying "Your dealership no longer has access to . Contact your Prolook admin." with a link back to Add Products; audit-log the denial (rep, brand, route)	Error handling and copy are inconsistent
Q-23	P3	Gap	What is the zero-entitlement copy, and how is "their Prolook admin" identified (name, email, link)?	OI-7. CNP A7: "render an explicit state naming the problem and directing the rep to their Prolook admin — not a silent empty list"	Suggest: "No brands are set up for your dealership. Contact your Prolook admin to enable brands." Source the admin contact from QX7 or the dealership record, or use a generic support address if none	The empty state can't be finalised
Q-24	P3	Gap	Is Customize New Product available on Open and Closed stores, and blocked (UI and server) on Archived stores?	OI-19. CNP has no store-state rule; vs Lifecycle: "Given the store is Archived, when the rep opens the management workspace, then settings, products, roster, and orders are all visible but no field or action is editable"; Settings Epic B: the post-launch lock list is TBD	Suggest: available in Draft, Open and Closed (on an Open store, committed items go live immediately); hidden and rejected server-side on Archived	Products could be added to archived stores
Q-25	P3	Gap	What are the targets and event definitions for the success metrics?	OI-14. CNP Metrics: "Picker→customizer hand-off completion"; "Time to start a new product"	Suggest: hand-off completion = items staged ÷ sport/category card clicks (target e.g. ≥70%); time to start = Customize New Product click to customizer loaded (target e.g. median under 10 s). Define the events: cnp_click, brand_selected, card_selected, customizer_loaded, item_staged, item_committed	Instrumentation can't be built and success can't be measured

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-26	P3	Gap	Does switching brand also reset any open sport/category grid or in-progress customizer session?	Consolidator finding. CNP A6: "Switching re-scopes the Customizer chip and the customizer target; already-staged items are unaffected"	Suggest: switching closes the grid, and an unfinished customizer design is discarded after confirmation	Edge-case behavior is undefined
