Clarification Questions — Launch & Status Controls

Sources: TS-Launch & Status Controls-161026-094523.pdf (cross-checked against TS-Store Status & Lifecycle, TS-Store Settings (Settings Tab), TS-Store Home (Home Tab), TS-Roster Management (My Team(s) Tab), TS-Customize New Product, TS-Order Management (Orders Tab), TS-Store Analytics (Reports Tab)) · Total: 18 (P1 4 · P2 10 · P3 4)

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	Is the launch gate "≥1 product added to the catalog" (hidden items count) or "≥1 visible product" (visibility toggle on)?	OI-1 · Launch & Status §AC Gate: "Given a draft store with zero products in its catalog … LAUNCH STORE is disabled" / "the gate is products added, not published" / §Dependencies: "The launch gate reads the store's catalog count (≥1 product added)" vs Store Home Epic C C-09: "No visible products — store cannot launch (Draft only) … Catalog holds zero visible products" and C-16: "Store is Draft and ≥1 visible product exists"	A) ≥1 visible product (matches Store Home; prevents an empty live storefront) — suggested. B) ≥1 product in the catalog regardless of visibility (update Store Home C-09/C-16 to match).	LAUNCH STORE and Home cards C-09/C-16 use different checks. A store with only hidden products can launch to an empty storefront while Home says it can't.
Q-2	P1	Ambiguous	Which catalog items count toward the launch gate? Is the gate re-checked on confirm? What happens to an Open store whose last product is removed or hidden?	OI-2 · Launch & Status §AC Gate: "Add at least one product to launch your store." / §Dependencies: "catalog count (≥1 product added)" vs Store Home C-12: an Incomplete bundle "cannot satisfy the launch gate"	Suggested: count only items buyers can order (visible, renders landed, not Incomplete bundles, not staged/uncommitted custom items). Re-check the gate server-side on "Launch Team Store" confirm. After launch: A) the store stays Open with no products and Home shows a warning — suggested. B) block removing or hiding the last product while the store is Open.	The catalog-count query and the enabled/disabled logic for LAUNCH STORE can't be written. A stale modal could launch a store that no longer passes the gate.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Conflict	Who receives the launch email? What does the modal promise when some players or managers have no email or there is no roster?	OI-6, OI-17, OI-18 · Launch & Status §AC Launch confirmation modal: "all players and the team manager receive an email that the store was created and can purchase team goods" / §Dependencies: "notification send to all rostered players and the team manager" vs Roster Mgmt: "rosters made optional and never a launch prerequisite; Contact Email made optional" and "player-addressed system emails — must degrade to a disabled or copy-only state with a stated reason" vs Store Settings Epic A: "Importing a coach creates a contact record only. It provisions no account, sends no email, and grants no portal access"	Recipients: players on rosters at launch time with a valid email, plus A) the primary / Point of Contact manager record only, B) every manager record with an email, or C) only managers invited to the portal. Suggested: A, with an explicit exception added to Settings ("launch notice is the one system email to manager records"). Modal copy: "n players and the team manager will be emailed; n players have no email". With no roster or no emails, say "No one will be emailed — share the store link instead". Players added after launch: not emailed (they use Share Team Store Link). Copy and sender come from System Emails.	The notification send can't be built. As written, launch emails people the Settings spec says the system never emails, and the modal promises emails that won't arrive.
Q-4	P1	Gap	What does Create Template copy, where are templates stored and used, and who owns or can see them?	OI-5 · Launch & Status §AC Live header controls: "Create Template, spins a reusable store template off this store" / §Dependencies: "a create-template flow seeded from the store's configuration" vs Store Settings Epic D: "saving this store's products, pricing, and settings as a reusable blueprint for future stores"	Suggested contents: products, pricing and settings. Excluded: roster, players, orders, schedule dates and Close Reports. Branding, fundraising, managers and announcement are A) copied or B) excluded. Flow: name the template → confirm → toast. Templates are offered as a start option in the store-creation wizard; say whether they are separate from Customize New Product's "Catalog Templates" chip. Visibility: A) the creating rep only B) the whole dealership.	The flow, the data model and the consumer (the wizard) can't be designed or estimated.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P2	Gap	Who can launch, preview and create templates? Any rep co-managing the store, the owner only, or team managers and league directors too?	OI-14 · Launch & Status §Persona: "Who is this for? Store owners / reps" vs Store Status & Lifecycle §Transitions (Draft → Open): "Rep only" vs Roster Mgmt §Solution: "store managers (reps, team managers, league directors)" vs Store Settings Epic C: "Danger Zone inside the Store Status card (hidden for manager-role users)"	Suggested: Launch = any rep with management access to the store (owner or co-managing rep); hidden from team-manager and league-director roles. Preview Store = everyone with workspace access. Create Template = reps only. Archive stays owner-only. Define "league director" as a role, or as a team manager on a League store.	The role checks on the header controls can't be implemented, and managers might take a store live.
Q-6	P2	Gap	Does launch lock the post-launch field subset from Store Settings, and must the launch modal warn about it?	OI-20 · Launch & Status §AC Launch confirmation modal: "confirms the consequences — all players and the team manager receive an email … and the store can be closed at any time" vs Store Settings Epic B: "Fields stay freely editable while the store is in draft mode; once launched, a (still-TBD) subset locks while the rest remain editable"	A) Yes: launch applies the lock in the same transaction, and the modal adds "Some settings (e.g. web address, fulfillment, tax) can't be changed after launch" — suggested, once Settings finalises the lock list. B) The lock applies but the modal doesn't mention it. Dependency: the Settings lock list must be finalised before the launch build.	The modal doesn't disclose a consequence of launch, and the launch transition can't apply a lock that hasn't been defined.
Q-7	P2	Gap	What happens when the launch fails, partly succeeds or races with another session?	OI-15 · Launch & Status §AC Launch: "when the rep confirms, then the store goes open, a 'Your store is now live!' success modal … and the onboarding milestone advances" / §Dependencies: "confirming launch triggers a notification send … and fires the onboarding-milestone event"	Suggested: the status write is the transaction. Email and milestone are sent asynchronously after commit with retry, and launch does not roll back if they fail. If the status write fails: error toast, store stays Draft. Make the endpoint idempotent so a double submit or two reps launching at once gives one launch and one email batch. Cancel/Escape/backdrop on the confirmation modal = Cancel; dismissing the success modal = Stay In Editor.	The backend transaction boundaries and the modal state machine are undefined, which risks duplicate emails or a store left half-launched.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-8	P2	Gap	How does launch interact with the Active Order Window? Does launch time or the Opens date start the window, and what happens when launching after the Closes date?	OI-16 · Launch & Status §AC Launch: "then the store goes open" vs Store Settings Epic E: "a Store Schedule toggle offers Set window vs. Always open; choosing Set window reveals Opens and Closes date pickers defining the order-accepting range" vs Store Status & Lifecycle Epic C: "Given a pop-up store with a configured close date/time, when that moment is reached, then the store automatically transitions to Closed" vs Store Analytics Epic D: "This season (the store's open window)"	A) Block launch when the Closes date is in the past (tooltip: "Update your store schedule"). Before the Opens date the store is Open but orders start at Opens; the window (and Analytics "This season") runs Opens → Closes, and the modal shows the dates — suggested. B) Launch time overrides Opens. C) Allow launch after Closes and auto-close immediately. Also confirm whether a Set-window store must have dates before launch.	The launch transition and the auto-close scheduler can conflict (a store launching and closing at once), and Analytics' window range is ambiguous.
Q-9	P2	Conflict	Is Create Template only in the post-launch header store menu, only on the Store Status card, or in both? In which store states is it available?	OI-4 · Launch & Status §AC Live header controls: "a store menu whose single option, Create Template" (launched store only) vs Store Settings Epic D: "Create Template: the same card carries Create Template" and §Solution: "Store Status card (close/re-open, Create Template, Danger Zone)"	A) Both entry points open the same flow; available on Open and Closed stores and hidden on Draft — suggested. Archived: A1) allowed read-only (template from a past season) or A2) hidden. B) Header only (remove it from the card). C) Card only (drop the header menu).	The header menu, the card layout and the per-state gating differ. Two teams may each build their own entry point.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-10	P2	Ambiguous	How do Preview Store and View Store behave: new tab or same tab, and what does the rep see when the store is Closed, Archived or Draft?	OI-9 · Launch & Status §AC Live header controls: "a Preview Store button that opens the live storefront (same behavior as the former View Store link)" and Launch: "offers View Store or Stay In Editor" vs Store Status & Lifecycle Epic F: "Given either Closed or Archived state, when a buyer attempts to access a product URL … redirected to the closed screen" vs Store Home Epic A: "the storefront URL, the Preview Store control … remain in the header" (no state restriction)	Suggested: open in a new tab. Open → live storefront. Closed → A) the rep sees the real storefront via an authenticated preview bypass (so they can check edits before re-opening) or B) the buyer's closed screen. Draft → no Preview Store (LAUNCH STORE shows instead). Archived → hidden.	The preview route and its auth/bypass rules can't be built. Reps may be unable to check Closed-state edits.
Q-11	P2	Conflict	Where exactly is the Store Status card (with Close / Re-open), and is the button called "Close Store" or "Pause"?	OI-3 · Launch & Status §AC Status semantics: "the actionable pause/resume control lives on the Settings tab's Store Status card (Close Store / Re-open Store — see the Store General Settings spec)" vs Store Settings §Solution: "Schedule & Status … Store Status card → Close / Re-open Store" vs Store Status & Lifecycle Epic B: "the rep opens the Store Status card on the Detail tab" and §Transitions: "rep clicks Pause on the Store Status card"	A) Settings → Schedule & Status → Store Status card, labelled "Close Store" / "Re-open Store" (matches Store Settings and the Open/Closed vocabulary) — suggested. Update Lifecycle ("Detail tab", "Pause") and this spec's "General Settings" reference. B) Settings → General. C) Detail tab.	The control's placement, deep links, Home routing and button copy can't be fixed. Three specs give three locations.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-12	P2	Ambiguous	What does "Closed … technically equivalent to a draft" mean? Does it cover order intake only, or is Closed stored or rendered like Draft?	OI-11 · Launch & Status §AC Status semantics: "Closed suspends ordering (technically equivalent to a draft) but, unlike a never-launched draft, flips back to Open directly" vs Store Status & Lifecycle §Behavior Matrix: Draft storefront "Not live — storefront URL is inaccessible to buyers" vs Closed: "'This store is closed' landing page", plus the Close Report and "Once launched it … cannot return to Draft"	A) Equivalent only in that new orders are blocked. Closed is its own persisted state with its own storefront page, Close Report and badge — suggested; delete "technically equivalent to a draft". B) Closed reuses Draft storefront logic (contradicts the Lifecycle spec).	Developers may reuse Draft logic for Closed. That breaks the closed landing page, Close Report triggers and the one-way Draft rule.
Q-13	P2	Conflict	Which status changes use a confirmation modal and which use a toast, and what is the copy?	OI-12 · Launch & Status §AC Status semantics: "Status changes confirm with toasts" vs Store Settings Epic D: "Close Store on the Store Status card, with a confirmation modal" vs Store Status & Lifecycle Epic B: "Given the rep clicks Close Store, when the confirmation appears…" and Epic D: "requires no confirmation modal" (Re-open)	Suggested: Launch = confirmation modal + success modal, no toast. Close = confirmation modal, then a toast "Store closed". Re-open = no modal, toast "Store re-opened". Auto-close = no toast; the Close Report modal serves as the notice. Confirm the toast copy.	The feedback for each transition will be inconsistent, and "confirm with toasts" may be read as replacing the required Close confirmation modal.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-14	P2	Gap	Where is the "Archived Stores section of the Account page", and how does a rep open an archived store's read-only workspace from it?	OI-13 · Launch & Status §AC Status surfaces: "archived stores are excluded from the directory and their cards appear only in the Archived Stores section of the Account page" vs Store Status & Lifecycle Epic E: "Given the store is Archived, when the rep views the Stores tab, then the store no longer appears in the list" and "the rep opens the management workspace, then … visible but no field or action is editable" vs Store Settings Epic C: "when the rep opens the backend management dashboard, then it is transitioned into a read-only historical record … the Store Status card shows an Archived pill" vs Store Home: "Given an Archived store, when Home renders, then the attention section is present and states that the store is archived and read-only"	A) Add an Archived Stores section to the Account page (owned by an Account spec); each card opens the read-only workspace — suggested. B) Add an "Archived" filter value to the Stores tab instead (contradicts Lifecycle Epic G). Also confirm that "dashboard store card" and the "Stores tab list" are the same surface.	Reps can't reach archived stores or their Close Reports, and no spec owns the Account page section.
Q-15	P3	Conflict	Does clicking LAUNCH STORE open a confirmation modal first, or open the store immediately?	OI-7 · Launch & Status §AC Launch confirmation modal: "a 'Launch Team Store' modal confirms the consequences … with Cancel / Launch Team Store actions" vs Store Status & Lifecycle Epic A: "when the rep clicks Launch Store, then the store transitions to Open immediately"	A) Confirmation modal → confirm → Open + success modal (matches the prototype audit) — suggested; change Lifecycle Epic A to "on confirmation". B) Immediate, with no modal.	QA can't write one acceptance test for both. It's cosmetic until the modal is built.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-16	P3	Conflict	What is the "onboarding milestone", and is it visible to the rep, given Store Home's ban on progress or completion language?	OI-8 · Launch & Status §AC Launch: "the onboarding milestone advances" / §Dependencies: "fires the onboarding-milestone event" vs Store Home: the Setup Guide is "explicitly not a checklist or a progress tracker" and "No completion, readiness, or score language anywhere on the page"	A) Backend/analytics-only event `store.launched` {storeId, repId, launchedAt} with no rep-visible progress (fits Store Home) — suggested. B) A rep-visible milestone (needs a Store Home exception). C) Drop it if nothing consumes it.	The event can't be emitted or consumed without a contract, and a visible milestone would break Store Home's no-checklist rule.
Q-17	P3	Conflict	Should every remaining "Active" status label be renamed to "Open", including the Overview KPI card title?	OI-19 · Launch & Status §AC Status semantics: "the live state was previously named Active; Open and Closed are the names used throughout" vs Roster Mgmt Epic 7: "whether a move is permitted once the store is Active or Closed" vs Store Status & Lifecycle Epic G: "Given the Active Stores KPI card on the Overview" vs its own §Behavior Matrix: "Overview KPI — Open Stores count" vs Store Home Epic I: "Home must not render 'Active' — a state that survives only in the stale Launch & Status Controls page"	A) Yes: rename everywhere to Open; the KPI card becomes "Open Stores" — suggested. Fix Roster Epic 7 and Lifecycle Epic G. B) Keep "Active Stores" as the KPI title only (a metric name, not a status).	Status labels and the KPI title stay inconsistent across surfaces, and "Active" leaks into UI copy.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-18	P3	Gap	What does the workspace header show in each state (status chip, storefront URL, Setup Guide re-entry, LAUNCH STORE / Preview Store / store menu), and with what chip colours?	OI-10 · Launch & Status §AC Status surfaces: "displayed as a Draft / Open / Closed tag on each dashboard store card, and the Stores tab's Filter control" and Live header controls: "LAUNCH STORE button is replaced by a Preview Store button … and a store menu" vs Store Status & Lifecycle Epic D: "the status badge updates to Open in the store list, workspace header, and any KPI aggregations" vs Store Home Epic A: "The store status chip, the storefront URL, the Preview Store control, and the Setup Guide re-entry point remain in the header where they are specified (Launch & Status Controls)"	Suggested header: status chip (Lifecycle Epic G colours: Draft blue, Open green, Closed amber) + storefront URL + Setup Guide re-entry in every state. Then Draft → LAUNCH STORE; Open/Closed → Preview Store + store menu; Archived → chip only. Add this table to this spec's Status surfaces.	The header layout is underspecified, and Store Home points to this spec for a definition it doesn't contain.
