Clarification Questions — Order Management (Orders Tab)

Sources: TS-Order Management (Orders Tab)-161026-094455.pdf (OM); cross-checked against TS-Roster Management (My Team(s) Tab)-161026-092450.pdf (RM), TS-Store Home (Home Tab)-161026-011919.pdf (SH), TS-Store Settings (Settings Tab)-161026-094514.pdf (SS), TS-Store Status & Lifecycle-161026-094525.pdf (SSL), TS-Launch & Status Controls-161026-094523.pdf (LSC), TS-Store Analytics (Reports Tab)-161026-094501.pdf (SA), TS-Customize New Product-161026-094448.pdf (CNP) · Total: 28 (P1 2 · P2 17 · P3 9)

Every summary open item OI-1 to OI-27 appears in the Source column of at least one question. Every cross-document conflict quotes both documents. Rows marked "Consolidator finding" were raised directly from the documents, not from a summary open item.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	What are pending-order shipping containers keyed on: rosters ("roster group / standalone roster") or divisions and teams? Where do pending orders go for a team with no roster, and for fan and rep-placed orders that have no rostered player?	OI-11, OI-3. OM Epic B: "League stores render one container per roster group plus one per standalone roster; Single-Team stores get a single container"; OM deps: "keyed to the store's roster architecture (roster groups / standalone rosters / single team)" vs RM §Object model: Team is "The unit everything else keys off: product assignment, shipping containers"; RM: "a team may exist with no roster attached"; SS A3: Order Fulfillment Mapping "maps a freight recipient to every shipping container. Per-division mode: each division routes to the league manager, a single division manager, or individual team managers"; SH: "Say group, never container"	A) One container per division plus one per standalone team (team-keyed, roster-independent). Fan and rep orders join the container of the team they were placed against, or a store-level container if none. The rep-facing label is "group". B) Keep roster-keyed containers and define the no-roster, fan and rep-order cases. Suggest A, and rename "roster group" to "division" in OM	Order grouping, MOQ progress, fees and freight routing are wrong, or fail for roster-less teams and fan orders. The Settings mapping and the Orders containers key on different entities

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-2	P1	Gap	What are the MOQ thresholds and the minimum-quantity fee formula? What unit is counted, who configures the values, and is MOQ evaluated per container, per manufacturer within a container, or per product?	OI-1, OI-27. OM deps: "Pending submission needs MOQ thresholds and minimum-quantity fee calculation per shipping container"; OM §Problem: "most manufacturers enforce minimum order quantities (MOQs)"; OM Epic B: "an info tooltip stating the fee that applies if submitted short" vs CNP Epic A: reps may be entitled to several brands (owned and licensed) and one catalog may mix brands; SS Epic G: multi-source stores carry "third-party vendor catalogs"	Specify: A) source (per manufacturer, per product, or per container); B) unit (garments, lines or orders; whether team-supplied $0.00 items count); C) fee formula (flat, or per missing unit); D) mixed-brand containers. Suggest per-manufacturer MOQ from the factory/catalog service, evaluated per manufacturer within each container and counted in garments, with a per-shortfall-unit fee	The progress ring, the tooltip, the review-modal fee line, the SH C-02 card and the below-MOQ metrics can't be built
Q-3	P2	Gap	Who besides the rep may use the Orders tab: team managers and league directors? What can each role view or do (submit, enter a PO, use the Epic E update, see PO numbers)?	OI-17. OM §Persona: "The store manager (rep) viewing and managing all orders" vs RM §Solution: "store managers (reps, team managers, league directors)"; SS A2b: team-manager portal has "exactly two areas — Reporting and Rosters (no products, orders, settings, or vault)" vs SSL Close Report: team-manager role has "full parity with the rep for this report" (including the order table with PO numbers)	Suggest: Orders tab is rep-only (plus league directors if they are store managers); team managers see order data only through the Close Report and the My Team(s) gear drawer, and cannot submit or update	Authorization can't be built, and PO data may be exposed or hidden inconsistently

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-4	P2	Ambiguous	Does storefront checkout also write the jersey number or name on jersey back onto an existing player record, or only the shipping address?	OI-26. OM §Governing rule lists only two order → roster write-backs: "Checkout writing a shipping address onto a player record" and "a team-gear order creating a Roster Bank capture" vs SS Epic F: "Players choose their own numbers (buyers enter a number on the product page and the roster fills in as orders arrive)"; RM schema: address "writes back onto the roster (same pattern as Name on Jersey)"	A) Checkout writes number and name back only into blank roster fields on an existing record (never overwrites), the same as the address. B) Only the address writes back; numbers fill the roster only through captures. Suggest A, and never fire a write-back and a capture for the same order	Divergence may show at purchase time, and write-back and capture may both fire for one order
Q-5	P2	Conflict	May a player with team-gear orders be moved to another team? If yes, which container does their pending order stay in?	OI-13, OI-7. OM §Governing rule: "Roster Management deliberately blocks nothing"; "moving them to another team... leaves every existing order line exactly as it was" vs RM Epic 7: "Given a player with one or more team-gear orders, when a move is attempted, then the move is refused, the control is disabled"; RM: "OPEN — the order-state block above should be reconsidered... that order is routed to the origin team's shipping container"	A) Keep the refusal and amend the OM wording. B) Permit the move; existing orders stay in the origin container and ship there, and the move confirmation says so. Suggest B, decided by the fulfillment owner	Move rules and container membership for moved players are undecided, and freight may go to the wrong coach

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-6	P2	Ambiguous	Which snapshotted fields take part in divergence and the Epic E update: number and name only, or also size and the Direct-to-Home address? If size can change, can it change the price?	OI-6, OI-15. OM §Governing rule: "Jersey number, name on jersey, size, and — on Direct-to-Home stores — the shipping address are written onto the line"; OM Epic E: "snapshot is rewritten from the player's current roster values"; "Pricing is unaffected. Personalization carries no price" vs RM Epic 3: "nothing in this tab writes an address back onto a placed order... the divergence treatment in Epic 2 applies to the Player Address column"; the RM player schema has no size field	A) Number, name and address diverge and can be updated; size is buyer-chosen, never compared or updated, so price can't change. B) Number and name only; address divergence is information only. C) All four fields, which needs a Size field on the player and a repricing rule. Suggest A	The comparison logic, the update endpoint's scope and the pricing guarantee are undefined, and wrong-address shipments are possible
Q-7	P2	Gap	Does All Orders include player (team-gear) orders, and with which origin badge?	OI-3. OM §Problem: "their own rep-placed orders, individual player orders for team-required/supplied gear, and fan orders"; OM user story: "every order in my store — mine, players', and fans'" vs OM Epic A: "consolidating the rep's own orders and fan orders into one view, with each row badged by origin (My Order / Fan)"	A) Include player orders with a third badge, "Player" (My Order / Player / Fan). B) Player orders are visible only in the My Team(s) drawer. Suggest A	Player orders are not listed after submission, and the badge enum and list query are incomplete
Q-8	P2	Conflict	Do the Reports "Pending Orders" and "Orders" KPIs count the same orders as the Orders sub-tabs they link to?	OI-21. OM Epic A: Pending lists "orders that have been placed in the storefront but not yet approved by the rep and sent to the factory"; "Pending orders appear only in the Pending sub-tab" vs SA Epic B: "Card 3 · Pending Orders — count of active orders currently processing... jumps to the Orders tab's Pending Orders sub-tab"; "Card 2 · Orders — total volume count of closed sales... jumps to the Orders tab's All Orders view"	A) One shared definition: Pending = placed, not yet submitted; Orders = submitted, not cancelled. B) Reports counts all in-flight orders and the cards are relabelled. Suggest A	The KPI numbers won't match the counts on the sub-tabs they open

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-9	P2	Conflict	What is the canonical order status and production-stage list, including pending, cancelled and refunded?	OI-4, OI-19. OM Epic D: "production-stage stepper (Submit Date → Order Confirmed → production stages → Delivery)"; OM Epic A: "An Order Status Guide explains each lifecycle stage"; OM deps: "storefront → pending → submitted" vs SSL Close Report: "production-stage mix (Order placed → Confirmed → Artwork → Factory production → Shipped → Delivered)", and its figures must "reconcile exactly" with the Orders tab	Provide one enum, for example: Pending → Submitted → Confirmed → Artwork → In production → Shipped → Delivered, plus Cancelled and Refunded	The status field, the filter, the stepper, the Order Status Guide and the Close Report are built against different lists
Q-10	P2	Gap	Can a pending order be cancelled or refunded? Who can do it, from where, and what happens to the payment and the MOQ progress?	OI-22. OM defines no cancel action or cancelled state vs SH C-01 clears when "Every pending order is submitted or cancelled"; SH C-18: "Every order reaches Delivered or is cancelled"; SSL: "a refunds / cancellations summary"; SS A4: "An item carrying a non-cancelled order has its fundraising toggle locked"	A) The rep can cancel a pending order line from the order drawer, which refunds it and removes it from MOQ progress. B) Cancellation is handled outside this tab (support/admin only), and OM shows the Cancelled status. Suggest A for pending orders only	Pending orders that must not ship have no path out, SH C-01 may never clear, and the state machine is incomplete
Q-11	P2	Gap	When the rep uses Submit Selected (n) for only part of a container, is MOQ measured and the fee charged on the selected rows or on the whole group? What happens to the rows left behind?	OI-2. OM Epic B: "check any number of rows and Submit Selected (n)"; "Minimum Quantity Fee itemized per shipping group and in the order summary"	A) MOQ and fee are computed on the selected subset per group; the remainder stays pending with its own progress from zero. B) Partial-group submission is not allowed. Suggest A	The fee may be wrong (overcharged or missed), and the remaining group's MOQ progress is undefined

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-12	P2	Conflict	What blocks a submission? Is the Assign Managers gate the only blocker, or does a missing ship-to destination address (store-level or on an assigned manager) also block it? How does the gate work for Direct-to-Home stores?	OI-23. OM Epic B: "Given a submission that includes a group whose fulfillment routing is unresolved (missing group/team manager), then an Assign Managers modal blocks the flow" vs SH C-04 (Blocking): "Fulfillment method is Ship to Team Manager and the destination address is empty"; SH: C-03 and C-04 "Both block pending-order submission"; SS A3: "incomplete manager assignments — or a missing destination address on an assigned manager — block pending-order submission (see the Order Management spec)"; SS A3: "pending orders cannot be submitted for fulfillment until an address exists"	A) The gate checks manager assignment and the destination address, and collects both before review. B) The gate checks managers only; a missing address disables Submit with a link to Settings → Fulfillment Method. Direct-to-Home has no manager or destination gate (each line ships to its snapshotted address). Suggest A	Orders can be submitted with no freight destination, or the gate fires wrongly for Direct-to-Home stores
Q-13	P2	Ambiguous	Is the Assign Managers modal a third host of the Settings Order Fulfillment Mapping component? Does it create new manager records or only pick existing ones? Is the manager unit a "group/roster" or a "division/team"?	OI-12, OI-25. OM Epic B: "collecting the group manager, or a team manager for every unassigned roster, with address verification — and on completion automatically continues to the review modal"; OM Epic B: "shipping destination (league / group / team managers)" vs RM Epic 0: "each division routes orders to the league manager, a division manager, or individual team managers"; RM: "both surfaces read and write the same state"; SS A3: "The picker draws on the store's existing manager collection (Epic A2c)"; SS: "Manager records collect First/Last Name, Email, 10-digit Phone, and Address"	Suggest: the modal reuses the SS mapping component, scoped to the groups in the submission; it can pick an existing manager or add a new one to the A2c collection (with address verification); the unit is division/team, and OM terminology changes to match	The modal's write path and data model are undefined, and the manager mapping may fork into two inconsistent stores

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-14	P2	Gap	What happens on Confirm · $total? Is one factory order created per shipping group or per web order? How are Factory Order numbers assigned, and what happens if submission to the factory fails partly or completely?	Consolidator finding. OM Epic B: "reviews the order summary (subtotal, any minimum-quantity fee, total)... before clicking Confirm · $total"; OM Epic D: "the drawer header carries the Web Order # and Factory Order #"; OM deps: "storefront → pending → submitted lifecycle"	Suggest: one factory order per shipping group, carrying the PO number; submission is atomic per group; a failed group stays pending with an error shown in the modal, and successful groups are not rolled back	Submission, retries and the Factory Order # link can't be designed, and double submissions or lost orders are possible
Q-15	P2	Gap	Is there a PO payment/settlement status (Open / Settled)? Where does it come from, and who marks a PO settled?	OI-20. OM Epic B: payment is entered only "as a PO Number" (no settlement state) vs SSL edge cases: "Closed with unsettled payment (open PO) — Affected orders are flagged in the detail table"; SH C-20: "≥1 order in the window with an open PO", clears when "PO settles"	A) Add a PO status on the order, fed by the finance/ERP system. B) Drop the open-PO flags from SSL and SH for now. Suggest A if finance data exists, otherwise B	The PO data model is incomplete, and the Close Report flag and the SH C-20 card have no data
Q-16	P2	Gap	In Closed and Archived stores, can pending orders still be submitted and Epic E updates applied? What happens to pending orders left un-submitted when a store is archived?	OI-18. OM defines no behaviour by store status vs SSL Behavior Matrix: Archived "Read-only — all records viewable, nothing editable"; SSL Epic E: "settings, products, roster, and orders are all visible but no field or action is editable"; SSL Closed: in-flight orders "continue to process normally"; SSL: "any below-MOQ containers still open at close"; LSC: "Closed suspends ordering (technically equivalent to a draft)"	A) Closed: submit and update allowed (only storefront ordering is suspended). Archived: both blocked server-side, and archiving is refused or warned while pending orders remain. B) Pending orders are auto-submitted at close. Suggest A	Server-side submit and update guards can't be written, and pending orders may be stranded in archived stores

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-17	P2	Gap	How does an order from an uncommitted Roster Bank capture link to a player? Does it count in the gear drawer, show divergence, and which container does it join?	OI-16. OM Epic C: "each rostered player's drawer aggregates all of their team-required / team-supplied gear"; OM deps: "a roster join" vs RM Epic 5: captures "are not players... are not counted in player counts" but count toward team-gear completion tracking; RM: "If the team has no roster yet, committing the first capture creates one"	Suggest: the order line keeps a capture reference and gets the player foreign key when the capture is committed; it joins the container of the team it was placed against; no divergence is computed until committed	The roster ↔ order join is undefined for back-filled players, and their orders may be missing from tracking
Q-18	P2	Conflict	Which surfaces show the divergence read: only the player gear drawer and the order detail drawer, or also the Team Gear column and the Player Address column of the roster table?	OI-14. OM deps: "It is consumed by the player gear drawer (Epic C), the order detail drawer (Epic D), and nothing else" vs RM Epic 2: "when the Team Gear column and the player's gear drawer render, then the affected item states both"; RM Epic 3: "the divergence treatment in Epic 2 applies to the Player Address column"	A) Add both roster columns as consumers and amend OM. B) Remove them from RM. Suggest A, since OM says "The display rules are owned by Roster Management, Epic 2"	The divergence API contract and the roster table disagree, and the columns are either built or missing
Q-19	P2	Gap	Is a pending-order update recorded in an order amendment history (what changed, when, by whom), and is it shown anywhere?	OI-5. OM Epic E: "OPEN — to be confirmed: whether an update is recorded against the order for support purposes... the order currently has no amendment history"; OM deps: "should be settled before build, since no amendment history exists today"	A) Yes: a minimal amendment record (field, old value, new value, user, timestamp) shown in the order drawer. B) No record. Suggest A	Parent disputes can't be resolved, and the update endpoint may need rework after build
Q-20	P3	Ambiguous	Is a pending order "approved" by the rep, or only "submitted"? Is there a separate approval state?	Consolidator finding. OM Epic A: "placed in the storefront but not yet approved by the rep and sent to the factory" vs SH: "There is no approval step in the product... Home says 'n pending orders to submit', not 'approve n orders'"	Suggest: no approval state; the lifecycle is storefront → pending → submitted, and the OM copy changes to "not yet submitted to the factory"	Wrong state modelling and inconsistent copy

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-21	P3	Ambiguous	Which fields does search match: buyer name, player name or both; Web Order # or Factory Order #?	Consolidator finding. OM Epic A: "A search bar (by name, email, or order number) filters within the active sub-tab"	Suggest: buyer name, player name (from the snapshot), buyer email, Web Order # and Factory Order #	Search results differ from what reps expect
Q-22	P3	Gap	What are the All Orders filter fields, sort columns and default sort? Which date does the date-range picker use? What is the page size? Which columns does the CSV export hold, and at which grain?	OI-10. OM Epic A: "the view carries search, sort, filter, a date-range picker, a column-visibility control, row selection with a bulk bar (Export Selected), pagination, and a CSV Export"; OM deps: "No read path may resolve them through the roster — not... the PO / factory export, and not any report"	Suggest: filters on status, origin, team and date; sort by order date (newest first) by default; the date range uses the order-placed date; 25 rows per page; CSV at line-item grain with the visible columns plus snapshotted personalization, origin, status and PO number, respecting active filters	The All Orders table can't be built, and an export that joins the roster would break the snapshot rule
Q-23	P3	Gap	What payment and billing data does the review modal capture? Is the PO Number required, and in what format? What does "confirms billing" show?	OI-9. OM Epic B: "enters payment as a PO Number, confirms billing"; OM deps: "a review modal capturing PO-number payment + shipping"	Suggest: PO Number required, free text up to 50 characters; billing is the rep's dealership account, shown read-only for confirmation; PO is the only payment method	PO validation and the billing step can't be built
Q-24	P3	Gap	What channel, recipients, content and limits apply to Send Reminder?	OI-8. OM Epic C: "a Send Reminder action appears pinned to the drawer footer (only while gear is still un-ordered)"; OM deps: "plus a reminder channel"	Suggest: email to the player's contact email and associated (parent) emails, listing the missing items with a store link; at most one reminder per player per 24 hours; last-sent date shown	The reminder can't be built, and players may be spammed
Q-25	P3	Gap	Does the gear drawer have an "Opted out" state, and does it count as complete and suppress Send Reminder?	OI-24. OM Epic C: "each required/supplied item shows an ordered state... or a red 'Not ordered' flag"; Send Reminder "only while gear is still un-ordered" vs SH C-05: "Every rostered player's required gear is ordered or opted out"; SH: "A product with Allow opt-out enabled counts a player's 'I already own this' as satisfied"	Suggest: add an "Opted out" state that counts as complete and suppresses Send Reminder	Home and the drawer show different missing-gear counts

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-26	P3	Gap	What do the divergence line and Item View show when the player has been deleted or the roster cleared?	OI-7. OM §Governing rule: "Editing a player's number, renaming them, moving them to another team, deleting them, or clearing the roster entirely leaves every existing order line exactly as it was"; OM Epic D: "Item View notes the current roster value alongside the ordered one"	Suggest: no divergence and no Epic E action when no current player record exists; Item View shows "Player no longer on roster"; for a moved player, compare against their record on the new team	Null-reference cases in the divergence read are unspecified
Q-27	P3	Ambiguous	What does the order detail drawer show for a pending order that has no Factory Order # yet? Which item does Item View open on for a multi-item order?	Consolidator finding. OM Epic D: "the drawer header carries the Web Order # and Factory Order #... it opens in Item View by default (or Order View when opened from a factory-order link)"; "Given any order in any sub-tab"	Suggest: show "Not yet submitted" in place of the Factory Order #; Item View opens on the line that was clicked, or the first line when opened from the row	Drawer states for pending orders are undefined
Q-28	P3	Gap	If the roster changes between the drawer rendering and the rep clicking update, which value is written: the one shown on the button or the current roster value?	Consolidator finding. OM Epic E: "that single order line's snapshot is rewritten from the player's current roster values" vs RM Epic 2: "a single action — update the order to #7 — which rewrites that order line's snapshot to the current roster values"	Suggest: the request carries the displayed value; the server rejects it if the roster value has changed since, and the drawer refreshes	A rep may write a value they never saw onto a garment
