Prototype Answers — Order Management (Orders Tab)

Prototype: input/prototype/Team Stores/ (React .jsx loaded by .dc.html pages, no build; source read: workspace-app-integrated.jsx, loaded by Marucci Workspace.dc.html. workspace-app.jsx, loaded by Workspace.dc.html, has the same Orders code) · Questions: 28 · Answered 3 · Partial 17 · Contradicts 2 · Not in prototype 6

Evidence paths are relative to `input/prototype/Team Stores/`. All data comes from hard-coded mock arrays (`makeOrdersDataset`, `playerTeamGear`, seed constants). Submitting, sending reminders and assigning managers only change React state or show a toast. Nothing is saved anywhere.

Screens found

- Store workspace side nav: Home / My Team(s) / Products / Orders / Reports / Settings — workspace-app-integrated.jsx:1711 (`WORKSPACE_NAV`)
- Orders tab: All Orders / Pending Orders / Returns & Refunds (third sub-tab, not in OM) — workspace-app-integrated.jsx:24647-24650 (`OrdersTabV2`)
- All Orders table, toolbar, bulk bar, pager, CSV export, Order Status Guide modal — workspace-app-integrated.jsx:23155-23483 (`AllOrdersExperience`)
- Pending Orders containers + Submit Group / Submit Selected / Submit All — workspace-app-integrated.jsx:23672 (`PendingOrdersList`)
- Submit Order review modal — workspace-app-integrated.jsx:23864 (`SubmitOrderModal`)
- Assign Managers freight-gate modal — workspace-app-integrated.jsx:13277, 13341 (`freightGateFor`, `AssignManagersModal`)
- Order detail drawer (Order View / Item View, stepper) — workspace-app-integrated.jsx:24055-24525
- Team Gear drawer (My Team(s) player row) with Send Reminder — workspace-app-integrated.jsx:15806
- Move Players modal (My Team(s)) — workspace-app-integrated.jsx:16153
- Reports tab KPI cards (Orders / Pending Orders) — workspace-app-integrated.jsx:12081 (`PayoutsTab`)
- Reports "Still need to order" page — workspace-app-integrated.jsx:36934 (`NeedToOrderPage`)
- Store Close Report — workspace-app-integrated.jsx:32428 onward
- Team Manager Portal (Reporting + Rosters only) — workspace-app-integrated.jsx:32256 (`TeamManagerPortal`)
- Cross-store Orders Overview (All / Pending across stores) — workspace-app-integrated.jsx:5087-5264
- Legacy `OrdersTab` (My / Pending / Fan sub-tabs; superseded by OrdersTabV2, not wired) — workspace-app-integrated.jsx:11683
- Storefront.html — bundled storefront page (inlined build); not used for these answers

Answers

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-1	P1	Partial	The prototype uses the **division/team** wording (option A): a banner on the Pending tab says containers are keyed to a division or team. The mock data still builds one container per roster group plus one per standalone roster, and one container for single-team stores. Fan Gear rows sit inside team containers (Type column = "FAN GEAR"). Rep-placed pending orders and teams with no roster are not modelled. Standalone/unassigned containers always show "Shipping to league manager".	workspace-app-integrated.jsx:23716 — `Containers are keyed to a division or team.` ; workspace-app-integrated.jsx:24880-24902 — `...ROSTER_GROUP_SEED.map(` / `...STANDALONE_ROSTER_SEED.map(` ; workspace-app-integrated.jsx:24866 — `const PENDING_TYPES = ["Team Required", "Team Supplied", "Fan Gear"];` ; workspace-app-integrated.jsx:23696 — `if (!grp) return "Shipping to league manager"; // unassigned teams`	Medium
Q-2	P1	Partial	Each container has a hard-coded `pct` (percent of MOQ reached) and a flat `fee` . The ring and tooltip only show when `pct < 100` . There is no threshold value, counting unit, formula, per-manufacturer split or configuration screen. The values are samples only (fee always $30.00). A system email template mentions a "configured MOQ threshold", but nothing in the prototype sets it. Still open: thresholds, unit, formula, owner, mixed brands.	workspace-app-integrated.jsx:24886-24887 — `pct: gi % 2 === 0 ? 54 + gi * 9 : 100,` / `fee: gi % 2 === 0 ? 30.00 : 0,` ; workspace-app-integrated.jsx:23749 — `title={`Below the factory minimum — a $${(g.fee 0).toFixed(2)} fee applies.`}` (abridged); workspace-app-integrated.jsx:32006 — `"Pending orders reach the configured MOQ threshold."`	Low
Q-3	P2	Partial	Team managers get a separate Team Manager Portal with only REPORTING and ROSTERS. It has no Orders tab, and its KPI links into Orders do nothing. The Close Report is shown at full parity, PO numbers included. The Orders tab itself has no role checks, so anyone in the rep workspace can submit. League directors are not modelled.	workspace-app-integrated.jsx:32259 — `const NAV = [{ id: "payouts", label: "REPORTING" }, { id: "roster", label: "ROSTERS" }];` ; workspace-app-integrated.jsx:32299 — `<PayoutsTab store={mstore} onViewAllOrders={() => {}} onViewPendingOrders={() => {}} />` ; workspace-app-integrated.jsx:32260-32262 — `the manager reads the SAME Store Close Report as the rep ... the report itself is at full parity.`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-4	P2	Partial	Only the address carries a "From checkout" origin flag on a player record. No number or name write-back onto an existing player is coded. Numbers reach the roster only through Roster Bank captures: committing one creates a player from the capture's jersey number, name on jersey and address. A Settings option says "The roster fills in as orders come through". Still open: whether checkout writes number/name onto an existing record.	workspace-app-integrated.jsx:13805 — `number: jersey, nameOnJersey: c0.nameOnJersey ... shippingAddress: c0.address ..., addressFromCheckout: tr` (truncated); workspace-app-integrated.jsx:16543 — `From checkout`; workspace-app-integrated.jsx:31692 — `"The roster fills in as orders come through."`	Low
Q-5	P2	Contradicts	The prototype **refuses** the move. A player with any team-gear order is listed as blocked in the Move modal and can't be moved. The modal tells the rep to cancel the order in the Orders tab first. This matches RM Epic 7 but contradicts OM §Governing rule: "moving them to another team... leaves every existing order line exactly as it was". Move targets are also limited to the player's own roster group.	workspace-app-integrated.jsx:16160 — `const blocked = (players []).filter((p) => gear(p).orderedCount > 0);` (abridged); workspace-app-integrated.jsx:16197 — `players can't move — team-gear orders already placed.`; workspace-app-integrated.jsx:16203 — `A player follows their orders: cancel the team-gear order in the Orders tab to free them up`; workspace-app-integrated.jsx:13510 — `// Destination candidates stay inside the player's own roster group.`	High
Q-6	P2	Not in prototype	No divergence comparison or Epic E update exists anywhere in the Orders code. Pending rows carry a buyer-chosen `size` and the player name, but nothing compares them with the roster. Searched: "roster says", "ordered as", diverg, snapshot, "update the order" in the Orders/drawer code (lines 22591-24907) — no match. The only "divergence" hits are about roster duplicate-number settings (15925-16011).	searched: roster says, ordered as, diverg, snapshot — no match in Orders code	—
Q-7	P2	Partial	All Orders merges only rep orders (`my`) and fan orders (`fan`). Player/team-gear orders don't appear there after submission. A My Order/Fan badge component exists but no column renders it, so rows show no origin badge. Player orders appear only in Pending rows (Type = REQUIRED/SUPPLIED) and in the Team Gear drawer.	workspace-app-integrated.jsx:24623-24625 — `... (data.myOrders []).map((o) => ({ ...o, orderType: "my" })),` / `...(data.fanOrders []).map((o) => ({ ...o, orderType: "fan" }))` (abridged); workspace-app-integrated.jsx:23626-23633 — `function OrderTypeBadge({ type }) ... {fan ? "Fan" : "My Order"}` (defined, never used); workspace-app-integrated.jsx:23598-23611 — `makeAllOrdersColumns` has no type/origin column	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-8	P2	Partial	The KPI cards link to the matching sub-tabs, but their counts don't use the Orders data. Reports takes Orders = revenue / 46 and Pending = 17% of that. The Pending sub-tab badge counts every pending row across containers. Home counts the Orders data (`homeOrdersInfo`). So in the prototype the Reports figures don't match the tab they open. Still open: a shared definition.	workspace-app-integrated.jsx:12090-12091 — `const orders = Math.max(Math.round(revenue / 46), 1);` / `const pending = Math.max(Math.round(orders * 0.17), 1);` ; workspace-app-integrated.jsx:24645 — `const pendingCount = (data.pending []).reduce((n, g) => n + ((g.rows []).length), 0);` (abridged); workspace-app-integrated.jsx:12109 — `<RepStatCard label="Pending Orders" ... onClick={onViewPendingOrders} />`	High
Q-9	P2	Partial	Statuses: submitted, order-confirmed, artwork-production, factory-production, shipped, delivered, on-hold. The Order Status Guide shows them in that order. The stepper reads Submit Date → Order Confirmed → Artwork Production → Factory Production → Ship Date → Delivery, and On Hold maps to step 3. The Close Report uses the same keys with different labels ("Order placed", "Confirmed", "Artwork", "Factory production"). There is no Pending, Cancelled or Refunded status. Refunds show as a separate pill and in a "Returns & Refunds" sub-tab. Pending mock rows carry status "submitted". The filter also lists "Rework Needed" (= on-hold) and "Deleted" (always empty).	workspace-app-integrated.jsx:22594-22602 — `const STATUS_STYLES = { "artwork-production": ... "on-hold": ... "submitted": ...` ; workspace-app-integrated.jsx:24381-24387 — `{ id: "submit", label: "Submit Date" ... { id: "delivery", label: "Delivery" ...` ; workspace-app-integrated.jsx:32429 — `{ key: "submitted", label: "Order placed", w: 0.06 },` ; workspace-app-integrated.jsx:24858 — `factory: "PMP", quantity: 1, status: "submitted",` ; workspace-app-integrated.jsx:23069 — `case "deleted":return false;`	High
Q-10	P2	Partial	The Orders tab has no cancel or refund action. The drawer footer has only "Contact Support". Other screens assume cancelling happens in the Orders tab ("cancel the existing pending orders before unpublishing"; "Cancel the blocking orders from the Orders tab first"). Buyer cancellation requests are emails the rep "must action manually". Refunds appear read-only in the Returns & Refunds sub-tab. Still open: who cancels, where, and the effect on payment and MOQ.	workspace-app-integrated.jsx:24503 — `const base = ["Contact Support"];` ; workspace-app-integrated.jsx:28929 — `Cancel the blocking orders from the Orders tab first` ; workspace-app-integrated.jsx:32005 — `"A buyer requests a cancellation — the rep must action it manually."` ; workspace-app-integrated.jsx:24650 — `{ id: "refunds", label: "Returns & Refunds", desc: "Refunded & partially refunded" ...`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-11	P2	Partial	On Submit Selected or a single-row submit, each container keeps its full-group `fee` and `pct`, so the review modal charges the whole group's fee on the selected subset. MOQ is not recalculated. Confirm only shows a toast, so rows (submitted or not) stay in the list unchanged. What happens to the remaining rows is not modelled.	workspace-app-integrated.jsx:23701-23704 — `map((g) => ({ shippingGroup: g.shippingGroup, title: g.title, fee: g.fee, pct: g.pct, rows: g.rows.filter(keep).map(toLine) }))`; workspace-app-integrated.jsx:23870 — `const feeTotal = groups.reduce((s, g) => s + (g.fee 0), 0);` (abridged)	High
Q-12	P2	Partial	The gate blocks only when a league group is in "teams" mode and a roster's team manager record is incomplete. The modal requires an address and runs it through address validation. Single-team stores, standalone rosters and league/group-mode groups never block. The prototype has no gate kind "group", although the modal can render it. There is no store-level destination-address check and no Direct-to-Home case (the gate ignores `distributionModel`). Still open: address blocker and DTH rule.	workspace-app-integrated.jsx:13278 — `if (!org (store && store.storeType) === "single") return null;` (abridged); workspace-app-integrated.jsx:13281 — `if (!g) return null; // standalone rosters route to the league manager`; workspace-app-integrated.jsx:13284-13286 — `if (mode === "teams") { const missing = g.rosters.filter((r) => !managerComplete(managers[r.id]));`; workspace-app-integrated.jsx:13308 — `e.address = "Address is required for order fulfillment"`	High
Q-13	P2	Answered	The modal is a separate component, not the Settings mapping UI. It writes **new** manager entries (First/Last/Email/10-digit Phone/Address, address verified) into the shared `org.managers`. Settings and My Team(s) read the same state. It can't pick an existing manager. The unit is the roster ("rosters are missing a manager"), keyed by roster id. On Save it automatically continues to the next gate or the review modal.	workspace-app-integrated.jsx:13341 — `function AssignManagersModal({ gate, org, store, onClose, onComplete })`; workspace-app-integrated.jsx:13364 — `const res = await validateAddressService(next[t.id].address);`; workspace-app-integrated.jsx:24700-24704 — `setOrg && setOrg((o) => ({ ...o, managers: { ... (o.managers {}), ...entries } }));` … `requestSubmit(grps, merged); // auto-continue` (abridged); workspace-app-integrated.jsx:13384 — `rosters are missing a manager`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-14	P2	Not in prototype	Confirm closes the modal and shows a toast ("n orders submitted"). It doesn't create a factory order, assign a Factory Order #, change state or handle failures. The modal's own subtotal uses fixed per-kind unit prices. Searched: factoryOrderNum assignment, submit error/retry, failure — no match.	workspace-app-integrated.jsx:24711-24713 — `onConfirm={({ itemCount }) => { setSubmitGroups(null); setToast(...)` — toast only	—
Q-15	P2	Partial	The Orders tab shows only "PO #" and "Payment Terms" (default "Net 30") with no settlement status. The Close Report flags an "open" PO, but that flag is mock data (`i % 17 === 5`), not a modelled status. Still open: data source and who settles.	workspace-app-integrated.jsx:24169-24172 — `<OrderSummaryCell label="PO #" value={order.poNumber} />` / `value={order.paymentTerms "Net 30"}` (abridged); workspace-app-integrated.jsx:32495 — `const poOpen = i % 17 === 5;` ; workspace-app-integrated.jsx:32929 — `title="Unsettled payment"`	Low
Q-16	P2	Partial	Archived stores get a "This store is archived — read-only" banner. But `readOnly` is never passed to the Orders tab, so Submit Group / Selected / All still render and work there. Closed stores behave the same as open ones in Orders. Nothing handles pending orders at archive. Still open: the submit/update rules per status.	workspace-app-integrated.jsx:28401 — `readOnly={!!activeStore.archived}` ; workspace-app-integrated.jsx:1787 — `This store is archived — read-only` ; workspace-app-integrated.jsx:11523 — `{tab === "orders" && <OrdersTabV2 store={store} org={org} setOrg={setOrg} pendingJump={pendingJump} ...` (no readOnly prop)	Medium
Q-17	P2	Partial	Each capture carries the order number and is keyed to a team id. The Pending tab says team-gear orders "also create bank-zone captures". Committing a capture creates a new player record and increments the team's count, but it never sets a player link on the order. The pending order sits in its team/division container. Completion/drawer counting and divergence for captures are not modelled.	workspace-app-integrated.jsx:13184 — `caps.push({ id: ..., player, nameOnJersey: last, jersey, size: ..., item: it.item, tier: it.tier, email, phone, address, order, date });` (abridged); workspace-app-integrated.jsx:13492-13496 — `function commitFromBank(teamId, player) { setInjected(...` ; workspace-app-integrated.jsx:23716 — `Team-gear orders here also create bank-zone captures`	Medium
Q-18	P2	Not in prototype	No divergence read on any surface: not in the Team Gear drawer, the order drawer, the Team Gear column or the Player Address column. Searched: roster says, ordered as, diverg — the only matches are roster duplicate-number settings.	searched: roster says, ordered as, diverg — no match in order/gear code	—

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-19	P2	Not in prototype	No pending-order update action and no amendment history. Searched: amend, history, update order in the Orders code — no match. Order drawer actions are only "Contact Support".	searched: amend, history, "update the order" — no match	—
Q-20	P3	Answered	The prototype has no approval state or Approve action. The only actions are Submit Group / Submit Selected / Submit All → review modal → Confirm. The Pending nav describes the tab as "Awaiting MOQ & submission". One mismatch: the empty-state copy still says pending orders "appear here for review".	workspace-app-integrated.jsx:24649 — `{ id: "pending", label: "Pending Orders", desc: "Awaiting MOQ & submission", count: pendingCount },` ; workspace-app-integrated.jsx:23763 — `Submit Group` ; workspace-app-integrated.jsx:24531 — `"When customers place orders through your team store, they'll appear here for review."`	High
Q-21	P3	Contradicts	Neither sub-tab searches by email. All Orders matches store/team name, organization, customer, rep, Web Order #, Factory Order #, cart name, order #, sport, shipping group and product title. Pending matches organization, customer, `playerName`, rep, Web/Factory Order #, cart name and product title. Pending rows store the player in `player`, so player names never match in practice. The placeholder reads "Search Keyword". This contradicts OM Epic A: "A search bar (by name, email, or order number)". The unused `OrdersSearchBar` still carries that placeholder.	workspace-app-integrated.jsx:23372-23373 — `return [o.__store?.teamName, o.__store?.storeTitle, o.organization, o.customer, o.rep, o.webOrderNum, o.factoryOrderNum, o.cartName, o.orderNum, o.sport, o.shippingGroup, o.product?.title]` ; workspace-app-integrated.jsx:24615 — `return [o.organization, o.customer, o.playerName, o.rep, o.webOrderNum, o.factoryOrderNum, o.cartName, o.product?.title]` ; workspace-app-integrated.jsx:23164 — `placeholder="Search Keyword"`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-22	P3	Answered	**Sort:** None (default, unsorted), Organization, Factory Order #, Web Order #, Cart Name, Product, Ship To, Rep, Sport, Quantity, Shipping Group, Due/Ship Date, Temporary Ship Date, Status. Sorts are ascending only. **Filter** (single select, by status): None, Rework Needed, Submitted, Order Confirmed, Artwork Production, Factory Production, Deleted, Due/Ship On Time/Early/Late, Shipped, Delivered. **Date range:** Start/End/Due-Ship, all applied to `dueDate` (the Due/Ship date, not the placed date). **Paging:** 10/25/50/100 rows, default 25. **CSV:** one row per order line, visible columns only, current filtered view (or selected rows), files "all-orders.csv" / "selected-orders.csv". Columns: Product, Organization, Factory Order #, Web Order #, Cart Name, Customer, Rep, Sport, Quantity, Shipping Group, Due/Ship Date, Status. Product is always on. No origin, PO or personalization columns.	workspace-app-integrated.jsx:23018-23032 — `const ALL_ORDERS_SORT_OPTIONS = [ { id: "none", label: "None" }, ...` ; workspace-app-integrated.jsx:23035-23047 — `const ALL_ORDERS_FILTER_OPTIONS = [` ; workspace-app-integrated.jsx:23379-23381 — `if (range.start) out = out.filter((o) => parseOrderDate(o.dueDate) >= ...` ; workspace-app-integrated.jsx:23364 — `const [pageSize, setPageSize] = React.useState(25);` ; workspace-app-integrated.jsx:23333 — `{[10, 25, 50, 100].map((n) =>` ; workspace-app-integrated.jsx:23402 — `const head = visibleCols.map((c) => '"' + c.label + '"').join(",");` ; workspace-app-integrated.jsx:23448 — `onExport={() => download(view, csvName "all-orders.csv")}` (abridged)	High
Q-23	P3	Partial	The modal's left side shows Shipping Details (store contact name plus a fixed address, with an edit icon that does nothing), Payment Method with a "PO Number" text input pre-filled "8084640218", and Billing Address "Same as shipping address". The PO has no required check, format or max length, and Confirm is always enabled. PO is the only payment method. Still open: whether PO is required, its format, and the billing source.	workspace-app-integrated.jsx:23865 — `const [po, setPo] = React.useState("8084640218");` ; workspace-app-integrated.jsx:23939 — `<input value={po} onChange={(e) => setPo(e.target.value)} style={{` (no required/maxLength/pattern); workspace-app-integrated.jsx:23948 — `Same as shipping address` ; workspace-app-integrated.jsx:23924-23925 — `101760 Beatle Dr.` / `Bakersfield, CA 90564`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-24	P3	Partial	The Team Gear drawer's Send Reminder closes the drawer and shows "Reminder sent to {first last}". No channel, recipients, content or rate limit is defined. The Reports "Still need to order" page sends "to " + the player's email and disables the button when nothing is left to order. No system email template exists for gear reminders. Still open: channel, recipients, content and limits.	workspace-app-integrated.jsx:16655 — `onSendReminder={(p) => { setGearPlayer(null); setToast(`Reminder sent to ${p.first} ${p.last}`); }}`; workspace-app-integrated.jsx:37011 — `title={... "Nothing left to order" : "Send to " + p.email} onClick={() => onToast && onToast("Reminder sent to " + p.name + " at " + p.email)}` (abridged)	Medium
Q-25	P3	Partial	The Team Gear drawer shows only "ordered" or "Not ordered". Send Reminder shows while `orderedCount < total`, and opt-out is not considered. Elsewhere the prototype has an "Allow opt-out" product setting ("counts as satisfied"), and the Reports "Still need to order" page has an "Opted out" state counted as resolved. So the prototype itself is inconsistent between the drawer and Reports.	workspace-app-integrated.jsx:15809 — `const incomplete = orderedCount < total;`; workspace-app-integrated.jsx:15891 — `Not ordered`; workspace-app-integrated.jsx:29422 — `note: "“I already own this” counts as satisfied"`; workspace-app-integrated.jsx:36950 — `s === "opted" ? <span ...>Opted out</span>`	High
Q-26	P3	Not in prototype	No divergence line or "current roster value" in Item View, so deleted players or a cleared roster are not handled. Item View shows product, part ID, status, quantity, sport, PO, tracking, temp ship date and stepper only. Searched: roster value, no longer on roster, deleted player — no match.	searched: "no longer on roster", roster value, diverg — no match; Item View body at workspace-app-integrated.jsx:24286	—
Q-27	P3	Partial	The drawer header always renders "Factory Order #:" with `order.factoryOrderNum`. Pending rows have no such field (`mkPending` omits it), so the link is empty. Pending rows also show a "Submitted" badge and a stepper at "Submit Date" with the shared mock submit date. Item View opens on the clicked line. A factory-order link opens Order View. Pending rows open without siblings, so Order View lists only that line. Still open: the pending-state header/label.	workspace-app-integrated.jsx:24107-24109 — `Factory Order #:{" "}` … `{order.factoryOrderNum}`; workspace-app-integrated.jsx:24855-24858 — `const mkPending = (id, product, itemName, ...) => ({ ... factory: "PMP", quantity: 1, status: "submitted",`; workspace-app-integrated.jsx:23461 — `onOpen={(o) => openWith(o, "item")} onOpenOrderView={(o) => openWith(o, "order")}`; workspace-app-integrated.jsx:24057 — `const [activeItem, setActiveItem] = React.useState(order);`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-28	P3	Not in prototype	There is no update action, so no stale-value handling. Searched: update order, roster says, concurrency/version — no match. Concurrency would be a server concern anyway.	searched: "update the order", roster says, version — no match	—

Answered — no need to ask the US team

3 question(s) the prototype settles. Remove these from the list sent to the requirement owners.

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-13	P2	Is the Assign Managers modal a third host of the Settings Order Fulfillment Mapping component? Does it create new manager records or only pick existing ones? Is the manager unit a "group/roster" or a "division/team"?	The modal is a separate component, not the Settings mapping UI. It writes **new** manager entries (First/Last/Email/10-digit Phone/Address, address verified) into the shared `org.managers`. Settings and My Team(s) read the same state. It can't pick an existing manager. The unit is the roster ("rosters are missing a manager"), keyed by roster id. On Save it automatically continues to the next gate or the review modal.	workspace-app-integrated.jsx:13341 — `function AssignManagersModal({ gate, org, store, onClose, onComplete })` ; workspace-app-integrated.jsx:13364 — `const res = await validateAddressService(next[t.id].address);` ; workspace-app-integrated.jsx:24700-24704 — `setOrg && setOrg((o) => ({ ...o, managers: { ... (o.managers {}), ...entries } }));` … `requestSubmit(grps, merged); // auto-continue` (abridged); workspace-app-integrated.jsx:13384 — `rosters are missing a manager`	High
Q-20	P3	Is a pending order "approved" by the rep, or only "submitted"? Is there a separate approval state?	The prototype has no approval state or Approve action. The only actions are Submit Group / Submit Selected / Submit All → review modal → Confirm. The Pending nav describes the tab as "Awaiting MOQ & submission". One mismatch: the empty-state copy still says pending orders "appear here for review".	workspace-app-integrated.jsx:24649 — `{ id: "pending", label: "Pending Orders", desc: "Awaiting MOQ & submission", count: pendingCount },` ; workspace-app-integrated.jsx:23763 — `Submit Group` ; workspace-app-integrated.jsx:24531 — `"When customers place orders through your team store, they'll appear here for review."`	High

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-22	P3	What are the All Orders filter fields, sort columns and default sort? Which date does the date-range picker use? What is the page size? Which columns does the CSV export hold, and at which grain?	**Sort:** None (default, unsorted), Organization, Factory Order #, Web Order #, Cart Name, Product, Ship To, Rep, Sport, Quantity, Shipping Group, Due/Ship Date, Temporary Ship Date, Status. Sorts are ascending only. **Filter** (single select, by status): None, Rework Needed, Submitted, Order Confirmed, Artwork Production, Factory Production, Deleted, Due/Ship On Time/Early/Late, Shipped, Delivered. **Date range:** Start/End/Due-Ship, all applied to `dueDate` (the Due/Ship date, not the placed date). **Paging:** 10/25/50/100 rows, default 25. **CSV:** one row per order line, visible columns only, current filtered view (or selected rows), files "all-orders.csv" / "selected-orders.csv". Columns: Product, Organization, Factory Order #, Web Order #, Cart Name, Customer, Rep, Sport, Quantity, Shipping Group, Due/Ship Date, Status. Product is always on. No origin, PO or personalization columns.	workspace-app-integrated.jsx:23018-23032 — `const ALL_ORDERS_SORT_OPTIONS = [ { id: "none", label: "None" }, ...` ; workspace-app-integrated.jsx:23035-23047 — `const ALL_ORDERS_FILTER_OPTIONS = [` ; workspace-app-integrated.jsx:23379-23381 — `if (range.start) out = out.filter((o) => parseOrderDate(o.dueDate) >= ...` ; workspace-app-integrated.jsx:23364 — `const [pageSize, setPageSize] = React.useState(25);` ; workspace-app-integrated.jsx:23333 — `{[10, 25, 50, 100].map((n) =>` ; workspace-app-integrated.jsx:23402 — `const head = visibleCols.map((c) => '"' + c.label + '"').join(",");` ; workspace-app-integrated.jsx:23448 — `onExport={() => download(view, csvName "all-orders.csv")}` (abridged)	High

Still open for requirement owners

- Q-1 (P1, Partial): confirm containers are keyed by division/team (the prototype's wording) and not by roster group/standalone roster (OM text and the prototype's mock data). Define containers for teams with no roster and for rep-placed pending orders. The prototype puts fan gear inside team containers.
- Q-2 (P1, Partial): provide MOQ thresholds, the counting unit, the fee formula, who configures them, and the per-manufacturer/mixed-brand rule. The prototype has only hard-coded % and a flat $30 sample fee.

- Q-3 (P2, Partial): decide league-director access and role checks inside the Orders tab. The prototype gives team managers no Orders tab but full Close Report parity.
- Q-4 (P2, Partial): decide whether checkout writes number/name back onto an existing player. The prototype only flags addresses "From checkout".
- Q-5 (P2, Contradicts): pick one. The prototype (and RM) refuse moving players with team-gear orders. OM says moves leave orders untouched, which implies moves are allowed.
- Q-6 (P2, Not in prototype): define which fields diverge and can be updated, and the size/price rule.
- Q-7 (P2, Partial): decide whether player orders appear in All Orders and add the origin badge column. The prototype defines the badge but never renders it.
- Q-8 (P2, Partial): define shared counts. Reports KPIs in the prototype are calculated from revenue, not from the Orders data.
- Q-9 (P2, Partial): confirm the prototype enum (adds On Hold; no Pending/Cancelled/Refunded status) and one set of stage labels (Orders and the Close Report differ). Confirm the extra "Returns & Refunds" sub-tab, which OM doesn't list.
- Q-10 (P2, Partial): define pending-order cancellation (who, where, effect on payment and MOQ). The prototype has no cancel action but other screens point to one in the Orders tab.
- Q-11 (P2, Partial): confirm whether a partial-group submit should carry the full group fee (prototype behaviour) and what happens to the rows left behind.
- Q-12 (P2, Partial): decide whether a missing destination address blocks submission and define the Direct-to-Home rule. The prototype gate checks only incomplete team managers in "teams"-mode groups.
- Q-14 (P2, Not in prototype): define factory-order creation, Factory Order # assignment and submit-failure handling.
- Q-15 (P2, Partial): define the PO settlement status, its source and owner.
- Q-16 (P2, Partial): define submit/update rules for Closed and Archived stores. The prototype leaves submit active in archived stores.
- Q-17 (P2, Partial): define how a capture's order links to the player once committed, and its counting and divergence.
- Q-18 (P2, Not in prototype): choose the divergence surfaces.
- Q-19 (P2, Not in prototype): decide on amendment history.
- Q-21 (P3, Contradicts): choose the search fields. The prototype has no email search, its player-name search is broken, and the placeholder reads "Search Keyword". OM says name, email or order number.
- Q-23 (P3, Partial): decide PO required/format and the billing source.
- Q-24 (P3, Partial): define the reminder channel, recipients, content and rate limit.
- Q-25 (P3, Partial): add an "Opted out" state to the gear drawer and decide its effect on Send Reminder. Reports already has one.
- Q-26 (P3, Not in prototype): define the deleted-player / cleared-roster display.
- Q-27 (P3, Partial): define the pending-order drawer header (no Factory Order #) and the pending status label. The prototype shows "Submitted".
- Q-28 (P3, Not in prototype): define the stale-value rule for the update action.
