Clarification Questions — Roster Management (My Team(s) Tab)

Sources: TS-Roster Management (My Team(s) Tab)-161026-092450.pdf; cross-checked against TS-Customize New Product, TS-Launch & Status Controls, TS-Order Management (Orders Tab), TS-Store Analytics (Reports Tab), TS-Store Home (Home Tab), TS-Store Settings (Settings Tab), TS-Store Status & Lifecycle · Total: 44 (P1 5 · P2 26 · P3 13)

"Roster p.N" = page N of the Roster Management PDF. Other specs are cited by name and section.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	Pending-order shipping containers and the freight gate: are they keyed to teams (and divisions) or to rosters? Which container does an order go to for a team that has no roster?	OI-27. Roster p.7 Epic 0: "This structure is shared platform-wide: product assignment (Products tab) and pending-order shipping containers (Orders tab) key off it" and Roster p.3: "Roster ... Optional — a team may have no roster" vs Orders Epic B: "League stores render one container per roster group plus one per standalone roster" and freight gate: "a team manager for every unassigned roster"	A) Containers and the gate key off divisions and teams; "roster group" means division and "standalone roster" means standalone team (recommended; update the Orders wording) B) Containers key off rosters; orders for roster-less teams go to a fallback container (define it)	Orders for roster-less teams (the default, since rosters are optional) have no container or freight routing. The Orders and My Team(s) data models diverge.
Q-2	P1	Gap	What makes a storefront order "match" an existing player record, so that it writes back to that record instead of creating a Roster Bank capture?	OI-15. Roster p.12 Epic 3: "write-back completes a record that already exists. Where no matching player record exists, the order does not write back — it creates a Roster Bank capture instead (Epic 5). These are the two directions of the same plumbing and must not both fire for one order." and Roster p.10: "the row menu copies a per-player store invite link"	A) Explicit link only: the order came through the player's per-player invite link, or the shopper picked their name from the team's roster at the team selector (recommended) B) Automatic match on First + Last Name within the selected team C) Match on email when present, otherwise name D) Defined in the Roster-Optional Architecture spec, Epic C (please share it)	Write-back, capture creation and the "must not both fire" rule can't be built. A wrong match writes an address onto the wrong child's record.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Conflict	Storefront number entry has two gaps. (1) How do the Settings "Jersey Number Selection" modes interact with this spec? In "Team manager chooses" mode, is there any PDP or checkout number entry? (2) For a team with no roster, which duplicate policy governs shopper number entry, and are numbers held by captures locked?	OI-17, OI-32. Roster p.13 Epic 4: "Every number-entry surface obeys this: the roster add row, the edit drawer, the storefront PDP jersey-number entry, and checkout" and Roster p.12: "A roster's own value is what validation reads — always" and Roster p.3: "a team may have no roster" vs Settings Epic F: "Team manager chooses on behalf of players (numbers assigned on the roster; buyers see their assigned number, no entry at checkout) or Players choose their own numbers"	A) PDP and checkout number entry exist only in "Players choose" mode. A team with no roster uses the store-level default, and captures hold numbers under it. In "Team manager chooses" mode, an unrostered buyer orders without a number. (recommended) B) The picker is always shown and the mode card is removed. C) Create the roster as soon as a team is created, so a roster policy always exists.	The storefront number flow and the capture number-hold logic can't be built. Orders from unrostered buyers have no number rule.
Q-4	P1	Conflict	Is the inheritance rule for teams added to a division after a division-wide product assignment decided ("extends forward") or still open? Is division scope a stored rule or a fan-out at drop time?	OI-21. Roster p.17 Epic 6: "A product assigned to a division applies to every team in that division, including teams added to the division after the assignment was made" vs Roster p.21 Dependencies: "the inheritance rule for teams added to a division after a division-wide assignment is open (see Epic 6) and determines whether division scope is a stored rule or a drop-time fan-out"	A) Decided: extends forward, and division scope is stored as a rule resolved at read time (recommended; delete the "open" note) B) Open: fan-out at drop time to the teams present then, and new teams get nothing	This decides the assignment data model shared with the Products tab, the "via division" rows and the coverage counts

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P1	Conflict	Can a player with team-gear orders be moved to another team? If yes, what happens to their existing orders' container and freight destination?	OI-22. Roster p.18 Epic 7: "Given a player with one or more team-gear orders, when a move is attempted, then the move is refused, the control is disabled, and the reason is stated" and Roster p.18: "OPEN — the order-state block above should be reconsidered" vs Roster p.2: "Roster edits are never blocked by order state" and Orders Governing rule: "moving them to another team ... leaves every existing order line exactly as it was ... Roster Management deliberately blocks nothing"	A) Allow the move. The confirmation states that existing orders still ship to the origin team's container (recommended in the spec). B) Keep the refusal and change the Orders wording. C) Allow the move and re-route pending (not submitted) orders to the destination container.	Epic 7, bulk move and order routing are blocked. The spec contradicts itself and Order Management.
Q-6	P2	Gap	Does the player record store a size? If not, does size take part in the divergence check?	OI-2. Roster p.1 Problem: "names, numbers, emails, sizes, addresses" and Roster p.20: "jersey number, name on jersey, size, and shipping address are copied onto the order line at purchase ... The divergence read compares a player's current roster values against the snapshot" vs Roster p.4-6 schema (no size field) and Orders Dependencies: "Jersey number, name on jersey, size, and the Direct-to-Home shipping address are written at purchase"	A) No size on the roster; divergence covers number, name on jersey and address only (recommended) B) Add an optional Size field to the schema, the CSV template and the divergence check	Data model, CSV template and divergence logic

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-7	P2	Gap	Which roles can do each My Team(s) action? This covers structure edits, adding/editing players, CSV, Clear/Delete Roster, the duplicate policy, moves, Roster Bank commits and product assignment. Who is a "league director", and what does the team-manager portal "Rosters" area allow?	OI-25. Roster p.2: "store managers (reps, team managers, league directors) build and manage team structure" and user stories "As a rep or team manager, I want to clear an entire roster or delete a roster" and Roster p.21: "Assignment permissions follow the Products tab's existing rules" vs Settings People & Access: "two areas — Reporting and Rosters (no products, orders, settings, or vault)"	A) Rep: everything. Team manager (portal): player add/edit, CSV and Clear Roster on their own team only, with no structure, policy, move or product actions. League director is the same as rep. (recommended) B) Provide a full permission matrix	Authorization and hiding actions in the UI can't be built
Q-8	P2	Conflict	Will the TBD post-launch lock list include the Team & Roster controls? Can Allow Duplicate Numbers (league-level and per roster) and the Jersey Number Selection mode still be changed after launch?	OI-34. Roster p.2: "A rep may change a jersey number, a name on jersey, or a duplicate-number policy at any time" and Roster p.14: "The switch is never blocked" vs Settings Epic B: "Given a launched store ... a subset of fields becomes non-editable ... the exact fields/inputs that lock after launch are TBD" (its exceptions list covers the Point of Contact, ship-to address, Team Fundraising, the manager collection and Store Customization only)	A) Allow Duplicate Numbers (both levels) is exempt from the lock. Jersey Number Selection mode locks after launch, because switching it mid-window changes the buyer flow. (recommended) B) Both are exempt C) Both lock after launch (contradicts the Roster governing rule)	The Roster governing rule may be overridden by the Settings lock layer. The edit-permission layer can't be built.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-9	P2	Gap	How is a roster created and named? Is there an explicit "Create roster" action, or is it created implicitly by the first manual add, CSV upload, capture commit or move into a team with no roster? What is the "name" shown in the delete toast?	OI-12, OI-24. Roster p.3: "Once created, a roster is attached to exactly one team" and Roster p.15: "If the team has no roster yet, committing the first capture creates one" and Roster p.10: "a success toast confirms ("Roster "name" deleted")" (the Roster entity has no name attribute)	A) Implicit: any first player write creates the roster, and the roster name is the team name (recommended) B) Explicit "Create Roster" button with an optional name field	Empty-team UI, add/import/move into roster-less teams, and the data model
Q-10	P2	Gap	Where are a division's "sport" and default brand colour set? In a League store, which branding pre-fills the product customizer: store-level or division-level? (Settings Epic I confirms division colour is edited in My Team(s), but it doesn't say whether the editor is the division modal or the detail panel.)	OI-5. Roster p.3: "Division ... Carries branding: name, color, sport" vs Roster p.8: "divisions are created with a name and brand color" and Roster p.21: "division brand color still takes its default" vs Customize New Product Epic C1: "The customizer auto-populates Team Name, Team Colors, and Logos from the store's branding" and Settings Store Customization: "per-scope announcement overrides and division-color application" and Settings Epic I: "its color contribution is the existing division brand color set in the My Team(s) tab detail panel" vs Roster p.8: "divisions are created with a name and brand color and edited in a modal"	A) Sport and colour are set in the division modal (the single editor that Settings links to); default colour = store theme colour; the customizer uses store branding (recommended) B) The customizer uses division branding when launched from a division scope	Division modal fields, defaults, and which surface owns division colour
Q-11	P2	Ambiguous	Is jersey number "00" different from "0"? Should the field be stored as an integer or a 2-character string?	OI-3. Roster p.4 schema: "Jersey Number ... Integer, 00–99 ... 2-digit numeric input" and Roster p.22: "jersey integer 00–99"	A) Store as a string of 1-2 digits, so "0" and "00" are distinct (recommended; common in sports) B) Integer 0-99, always shown with 2 digits, so 0 and 00 are the same	Data type, uniqueness check, grid size and factory output

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-12	P2	Conflict	Does Name on Jersey entered at storefront checkout write back onto an existing roster record, like the shipping address?	OI-1. Roster p.5 schema: "the parent/player supplies it at storefront checkout and it writes back onto the roster (same pattern as Name on Jersey)" vs Roster p.12 Epic 3: "Write-back is the one order → roster path" and Orders Governing rule: "Checkout writing a shipping address onto a player record ... and a team-gear order creating a Roster Bank capture" (no name write-back listed)	A) No. Only the address writes back; fix the "same pattern as Name on Jersey" wording, which refers to the field being optional. (recommended) B) Yes. A blank Name on Jersey on the roster is filled from checkout.	Checkout write-back scope and whether roster personalization changes from orders
Q-13	P2	Ambiguous	Is there an SMS channel for Send Reminder or share links? Can a player with only a phone number be reminded?	OI-13. Roster p.6: "Send Reminder is disabled with a reason" (only when neither email nor phone) and Roster p.10: "Send Reminder is disabled, with a reason, for a player with no contact channel" vs Roster p.22: "Sharing requires an email channel for the roster template and store-link sends" and Home C-05: "n of them have no email or phone, so a reminder won't reach them"	A) Email only: Send Reminder is disabled for players without an email, and a phone-only player gets copy-only (recommended unless SMS is in scope) B) Add SMS sending for phone-only players	Reminder and share enablement logic, and whether SMS integration is needed

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-14	P2	Gap	How are team codes generated (algorithm, uniqueness scope)? Do they change when a team is renamed, moved or made standalone after its division is deleted?	OI-6. Roster p.8: "Each division and team carries a deterministic, human-readable team code (e.g. RT47A)" and Roster p.21: "generated deterministically per division and team, stamped onto orders for container routing and reporting" vs Settings Schedule: "This scheduler is keyed per team code" and Orders Epic B: "Each container header shows the team code"	A) Generated once at creation (store prefix plus a sequence), unique per store, and immutable after that (recommended) B) Derived from the current division and team, regenerated on change, with historical orders keeping the old code	Routing, scheduling and reporting keys could break on structure changes
Q-15	P2	Gap	When a division is deleted, what happens to its division-wide product assignments, its fulfillment mapping/division manager, and pending orders in its container? How is revenue attributed in League Revenue reports after a division is deleted or a player moves teams: by the team or division at the time of the order, or the current one?	OI-7, OI-40. Roster p.8 Epic 0: "Deleting a division keeps its teams — they become standalone teams, dropping the division's branding, and each keeps its roster and players intact" vs Analytics Epic C: "filterable by team or division" and Orders Epic B containers "per roster group" and Roster p.18: "A moved player inherits the destination team's assigned products" (no rule for revenue already booked)	A) Division-wide products convert to direct team assignments; teams fall back to "Not assigned" fulfillment; pending orders move to per-team containers. Revenue is attributed using the team code stamped on the order at purchase, and reports keep the historical division label. (recommended) B) Division-wide products are removed (teams may go amber), and revenue follows the current structure	Teams could silently lose products or routing, and pending orders could be orphaned
Q-16	P2	Gap	Can an existing team be moved into, out of, or between divisions? If so, what happens to its "via division" products and fulfillment routing?	OI-8. Roster p.8 Epic 0: "teams can be added to a division or standalone, renamed, and deleted with confirmation" (no move action specified)	A) Yes, by drag on the canvas or a "Move to division" action. The team gains the new division's products and routing and loses the old ones, and the confirmation states this. (recommended) B) No; delete and recreate	Structure editor scope, product inheritance and containers

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-17	P2	Conflict	How do standalone teams (and Single-Team stores) route orders? Should the Order Fulfillment strip show on division and team views for Direct-to-Home or Single-Team stores, given that Settings shows the mapping only for League stores that ship to team managers?	OI-9, OI-31. Roster p.8: "each division routes orders to the league manager, a division manager, or individual team managers ... Division and team views surface an Order Fulfillment strip" vs Settings Epic A3: "Order Fulfillment Mapping. Shown only for League stores whose fulfillment method is Ship to Team Manager" and Home C-08: "(League, Ship-to-Manager only)"	A) Standalone teams route to their own team manager or the league manager (rep picks); the strip renders only for League stores using Ship to Team Manager (recommended) B) Standalone teams always route to the league manager	Freight gate resolution for standalone teams and conditional rendering of the strip
Q-18	P2	Conflict	Can fulfillment mapping be edited inline on the My Team(s) division and team detail components, or do those surfaces only link to Settings → Distribution & Fulfillment?	Roster p.8: "Mapping is configurable in Settings → Distribution & Fulfillment ... and directly on the division and team detail components; both surfaces read and write the same state" and "edited in a modal (including fulfillment-manager mode)" vs Settings Epic A3: "jump-ins from the My Team(s) tab land on Settings → Distribution & Fulfillment with the right division auto-opened" and Home C-08: "Resolves to Settings → Distribution & Fulfillment"	A) Both: the division modal edits the mode and assigns managers from the shared picker, and the strip's Manage link jumps to Settings (recommended; one shared component) B) Read-only strip in My Team(s), editing only in Settings	Whether My Team(s) builds a mapping editor at all

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-19	P2	Gap	What happens when deleting a team that has pending orders, pending captures or product assignments? What do gear and order views show for orders from deleted players or teams?	OI-10. Roster p.10: "Deleting a team is a separate action in Epic 0 and removes the team along with any roster it holds" and Roster p.20: "team deletion must remove the team from shared state, which product assignment and shipping containers consume" vs Orders Governing rule: "deleting them ... leaves every existing order line exactly as it was"	A) Block deletion while the team has pending orders. Dismiss captures and remove direct assignments, with counts shown in the confirmation. Orders keep their snapshot plus team code and show "deleted team". (recommended) B) Always allow it; pending orders move to a league-level container	Orphaned orders and captures, and broken containers
Q-20	P2	Gap	CSV import into a roster that already has players: append or replace? Are duplicate numbers checked against existing players and pending captures? How are the Associated Emails list and address columns formatted, and what happens for a team with no roster?	OI-11. Roster p.9 Epic 1: "invalid rows are skipped ... while valid rows import" and "Row 4: Duplicate jersey number 8 (also Row 2)" (in-file only) and Roster p.13: "The taken-number set for a roster is the union of its committed player records and the pending captures"	A) Always append. A number taken by an existing player or capture skips the row. Associated emails are separated by ";" in one column. Address uses Street/City/State/ZIP columns (Direct-to-Home only). Upload creates the roster if missing. (recommended) B) Offer Append or Replace in the modal	The import engine and template can't be specified
Q-21	P2	Conflict	Where is divergence shown: the Team Gear column and the gear drawer (per Roster), or the gear drawer and the order detail drawer only (per Orders)?	OI-26. Roster p.11 Epic 2: "when the Team Gear column and the player's gear drawer render, then the affected item states both" and Roster p.20: "consumed by the Team Gear column and the gear drawer" vs Orders Dependencies: "It is consumed by the player gear drawer (Epic C), the order detail drawer (Epic D), and nothing else"	A) All three: Team Gear column (indicator), gear drawer and order detail drawer; update the Orders wording (recommended) B) Gear drawer and order detail drawer only	The Team Gear column UI and the scope of the divergence query

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-22	P2	Conflict	For Player Address divergence on a pending order, does the "update the order" action rewrite the shipping address, or is address divergence information only?	OI-14. Roster p.12 Epic 3: "nothing in this tab writes an address back onto a placed order ... the divergence treatment in Epic 2 applies to the Player Address column in the same way it applies to personalization" (Epic 2 includes "update the order to #7") vs Orders Epic E: "that single order line's snapshot is rewritten from the player's current roster values" and Orders Governing rule: snapshot includes "the shipping address"	A) Address divergence is information only, and Epic E rewrites number and name only (recommended) B) The pending-order update also rewrites the address	Scope of the Epic E update and pending-order shipping
Q-23	P2	Gap	When a rep rewrites a pending order line through the update action, should the original snapshot be kept as amendment history (who, when, old and new values)? Is the buyer or parent notified?	OI-39. Roster p.11 Epic 2: "which rewrites that order line's snapshot to the current roster values" vs Orders Epic E: "the line is thereafter indistinguishable from one placed with those values" and "It is never automatic and never prompted" (no audit or notification specified)	A) Keep an amendment record on the line (old value, new value, rep, timestamp), visible in the order detail drawer, with no buyer notification (recommended) B) No history; overwrite in place as Orders states C) Keep history and email the buyer a change notice	Disputes and chargebacks ("the buyer paid for #12") can't be traced, and the order data model needs to know whether an amendment table exists
Q-24	P2	Ambiguous	When the league-level Allow Duplicate Numbers control is applied again, does it overwrite rosters that were overridden? Also: what is the default value, where is the roster-level toggle, and does the cascade apply to Single-Team stores?	OI-16. Roster p.12 Epic 4: "setting it at the league level cascades through every division to every team's roster in the store. Any roster may then override it, and the league-level control never overrides a roster afterward" vs Settings Epic F: "setting it writes the value to every roster in the store, and each roster may then override it"	A) Each apply overwrites all rosters, and the confirmation states how many overrides are replaced. Default is Off (not allowed). The toggle sits in the roster toolbar. Single-Team uses the same field with one roster. (recommended) B) Apply writes only to rosters that haven't been overridden	Cascade write logic, default value and UI placement

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-25	P2	Gap	When is a shopper's chosen number reserved (PDP selection, cart, or order placement)? What happens if two shoppers pick the same free number at the same time?	OI-18. Roster p.13: "A number claimed by a capture nobody has committed yet is unavailable — otherwise two buyers could take the same number in the gap between order and commit" and "A number that cannot be had must never appear selectable anywhere"	A) Reserved at order placement; the second checkout is rejected with "number just taken, pick another" (recommended) B) Soft hold at add-to-cart with a timeout	Concurrency guarantee and checkout error handling
Q-26	P2	Gap	Committing a Roster Bank capture whose number now conflicts on a roster that disallows duplicates (for example, captured while duplicates were allowed): is the commit blocked, prompted or grandfathered?	Roster p.15 Epic 5: "A capture commits at the values it was captured with" vs Roster p.4: "Where duplicates are disallowed the number must be unique on that roster" and Roster p.14: "When duplicates ARE allowed ... Pending captures impose no constraint"	A) Commit and treat the result as a grandfathered duplicate in the exception line (recommended; this is permissive) B) Prompt for a new number or commit without one C) Block the commit	Validation on commit; risk of the capture diverging from its order
Q-27	P2	Gap	Store Home C-05 links to a "store-wide player view filtered to incomplete". Is a store-wide player list with an incomplete-gear filter in scope for My Team(s)?	OI-28. Roster p.14: "as a store-wide view from the My Team(s) home, showing all pending captures" (only a store-wide Roster Bank view is defined) vs Home attention list: "C-15 ... My Team(s) → incomplete-player view" and Home Dependencies: "Where a route needs a filter Home cannot express — C-05's incomplete-player view ... that filter must be added to the owning tab as an addressable state, and that is an amendment to the owning spec"	A) Yes: add a store-wide player list with a "missing required gear" filter to this spec (recommended) B) No: C-05 and C-15 deep-link to the first team with incomplete players	Hidden scope; Home deep links have no target

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-28	P2	Gap	Which My Team(s) entities need stable deep-link routes (division, team, roster, store-wide Roster Bank, division coverage table, filtered player view)? Which My Team(s) writes must emit Home resume events?	OI-38. Roster p.8: "Drill-in: opening a division lists its teams; opening a team shows breadcrumbs" (no routing or event requirements) vs Home Epic C: "My Team(s) deep links must land scoped, not at the canvas. C-06's store-wide Roster Bank view, C-07's division coverage table, and every resume row targeting a team must open at that entity with breadcrumbs intact" and Home Dependencies: "The write path must be explicitly opt-in per surface ... Bulk operations must emit one event" (example: "imported 40 players")	A) Add addressable routes for division, team (roster view), division Products tab, store-wide Roster Bank and filtered player view. Emit resume events for player add/edit, CSV import (one event), capture commit, move, structure create/rename and product assignment. Destructive actions emit none. (recommended) B) Division-level jump-ins only (the existing pattern)	Home deep links and the resume trail have no targets in My Team(s). This is hidden scope for this tab.
Q-29	P2	Gap	Can a product be unassigned from this tab? Can one team opt out of a division-wide ("via division") product?	Roster p.16-17 Epic 6: only "Click to assign" and "Drag to assign anywhere" are specified, and "rows sourced from a division-wide assignment marked "via division""	A) Yes. Remove direct assignments from the Team Products tab; "via division" rows can only be removed at division level. (recommended) B) Also allow per-team exclusions C) No unassign here; use the Products tab	Assignment data model and Products tab UI rows
Q-30	P2	Gap	Move edge cases. Does moving into a team with no roster create one? Do the player's pending captures and gear tracking move too? Is "Move to team" hidden in Single-Team stores?	OI-24. Roster p.17 Epic 7: "a destination picker opens listing every other team in the store" and "each player leaves the origin roster and joins the destination roster" and Roster p.3: "In a Single-Team Locker store ... the store is one team"	A) A move creates the destination roster if missing; gear tracking follows the player record; captures stay on their team; Move is hidden in Single-Team stores (recommended) B) Moves into roster-less teams are not allowed	Move implementation and Single-Team UI

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-31	P2	Ambiguous	How does My Team(s) behave in each store state? (1) Can players be moved when the store is Open, Closed or Archived? (The lifecycle has no "Active" state.) Are moves recorded in the activity history? (2) On Archived stores, is the whole tab read-only, including Roster Bank commits and dismissals, policy toggles, product assignment and pending-order updates, despite the "at any time" rule?	OI-23, OI-33. Roster p.18: "To confirm before build: whether a move is permitted once the store is Active or Closed, and whether moves are recorded in the store's activity history" vs Store Status & Lifecycle: states are "Draft, Open, Closed, and Archived" and "Given the store is Closed ... all content remains fully editable" and Home Epic I: "Open (not Active) ... Home must not render "Active"" and Settings Epic C: "orders, roster, products, and settings remain viewable but no longer editable" vs Roster p.2: "A rep may change a jersey number ... at any time"	A) Draft, Open and Closed are fully editable, and moves are allowed and logged. Archived is read-only throughout, "at any time" means "in any editable state", and controls are hidden or disabled with the reason "Store archived". (recommended) B) Moves are allowed only in Draft and Open	State gating for every My Team(s) action, and the audit log scope
Q-32	P3	Ambiguous	Terminology alignment. Is the tab "My Team(s)" or "Roster"? Are the store types "Single-Team Locker" and "League (Multi-Team Hub)" or "Individual Team Store" and "League Store"? Is the fulfillment method "Direct to Home Delivery" or "Direct-To-Home Residential Delivery"? Should the Roster spec use "Open" rather than "Active"?	OI-35. Roster p.1: "Jul 28, 2026: tab renamed My Team(s)" vs Store Status & Lifecycle Epic A: "all tabs (Detail, Products, Roster, Orders, Reports) are accessible" and Home Epic E: "the first row reads My Team(s), not Rosters" and Roster p.3: "In a Single-Team Locker store", p.7: "In a League (Multi-Team Hub) store" vs Settings Epic A: "Store Type (Individual Team Store / League Store)" and Home Epic I: "Bound terms ... My Team(s) ... Open (not Active)" and Roster p.11: "Direct to Home Delivery" vs Settings Epic A3: "Direct-To-Home Residential Delivery"	A) Use the canonical labels everywhere: "My Team(s)" ("My Team" in single-team stores), the Settings store-type names, and "Open"; update the Roster and Lifecycle specs (recommended) B) Keep "Single-Team Locker" as the rep-facing name and update Settings and Home	Labels, copy and test cases differ across specs, which breaks Home's "no new vocabulary" rule

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-33	P3	Conflict	Which store-creation step number is "Divisions & Teams" and which is "Products" for League stores? Is the order Step 2 Divisions & Teams, then Products?	OI-36. Roster p.8: "renders as Step 2 of League store creation — see Step 2 — Divisions & Teams (League Stores)" and "the store has no catalog until the Add Products step that follows" vs Customize New Product Persona: "during store creation (Step 2 – Products)" and A8: "Step 2 of store creation and the Products tab"	A) League: Step 2 is Divisions & Teams and Step 3 is Products; Single-Team: Step 2 is Products. Specs should cite step names rather than numbers. (recommended) B) Products is always Step 2, and Divisions & Teams moves to Step 3	Wizard ordering and cross-references are wrong in one spec; the creation-context structure editor's position is unclear
Q-34	P3	Gap	Who receives the launch email to "all players"? Are associated emails included, and what happens to players without email, or when there is no roster?	OI-29. Launch confirmation modal: "all players and the team manager receive an email that the store was created" and Launch Dependencies: "a notification send to all rostered players" vs Roster p.2: "A roster is never required to launch" and Roster p.6: "A record carrying neither an email nor a phone number is valid"	A) Email to the contact and associated emails of committed players; players without email are skipped; with no roster only the team manager is notified; modal copy says "players with an email" (recommended)	Launch recipient logic and misleading modal copy
Q-35	P3	Gap	What characters are allowed in Name on Jersey? Is it stored in uppercase or only shown that way?	OI-4. Roster p.4 schema: "Name on Jersey ... String, max 15 characters ... Converted to UPPERCASE dynamically"	A) Letters, spaces, apostrophe, hyphen and period; accents stripped; stored uppercase (recommended) B) Any printable characters, stored as entered	Validation and factory output
Q-36	P3	Ambiguous	Does "10-digit numeric format" accept formatted input such as (555) 123-4567 or a leading +1? Are international numbers allowed?	OI-4. Roster p.5 schema: "Contact Phone Number ... String, validated to a 10-digit numeric format"	A) Strip formatting and a +1 prefix, store 10 digits, US/Canada only (recommended) B) Exactly 10 digits as typed	Validation and false CSV skips
Q-37	P3	Gap	Is there a maximum number of Associated Emails per player? Can one duplicate the primary email?	Roster p.5 schema: "Associated Emails ... Optional ... List of valid emails"	A) Up to 5, de-duplicated against the primary email (recommended) B) No limit	Validation and duplicate sends

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-38	P3	Gap	What are the CSV limits (file size, row count), the encoding, and the header-matching rules?	OI-11, OI-30. Roster p.9: "a structured .csv skeleton with headers matching the data model"	A) UTF-8, up to 1,000 rows or 2 MB, headers matched case-insensitively in any order, unknown columns ignored (recommended) B) Exact template headers only	Parser robustness and error messages
Q-39	P3	Gap	If the map service rejects an address, can the rep save it unverified? What happens when the service is down?	Roster p.12 Epic 3: "the address is validated against a map service on the backend before it is accepted ... a failed check offers a retry-or-leave-blank error"	A) No override: save with the address blank. During an outage, keep the address marked "unverified" and re-check later. (recommended) B) Allow "save anyway" with an unverified badge	Error handling
Q-40	P3	Ambiguous	Is the number grid always 00–99, or is the "roster's full number range" configurable?	OI-3. Roster p.13: "Number entry presents the roster's full number range as a grid with taken numbers greyed out"	A) Always 00–99 (recommended) B) Configurable min/max per roster	Grid component and data model
Q-41	P3	Ambiguous	How is team-gear completion counted? (1) Where do captures "count toward team-gear completion" when they are not players? (2) Does the Team Gear column "n/m" count a product opt-out ("I already own this") as satisfied, as Home C-05 does?	OI-19, OI-37. Roster p.15: "Captures are not players ... but they ... do count toward team-gear completion tracking" vs Roster p.10: "each row shows the player's team-gear completion ("n/m team gear items")" and Home C-05: "Every rostered player's required gear is ordered or opted out" and "A product with Allow opt-out enabled counts a player's "I already own this" as satisfied (Products Tab, Epic E)"	A) Captures count only in team, division and store aggregates, never in a player row. An opt-out counts as satisfied in n/m and is shown as "opted out" in the gear drawer. (recommended) B) Opt-outs are excluded from n/m (shown as n/(m-1))	Completion maths would differ between My Team(s) and Home, which violates Home's rule that counts match the tab exactly
Q-42	P3	Ambiguous	Is the division product count pill a count of distinct products or a sum across teams?	OI-20. Roster p.15: "a product count pill for the division — the number of products reaching its teams, whether assigned division-wide or team-by-team"	A) Count of distinct products reaching at least one team (recommended) B) Sum of per-team counts	Aggregate query and label

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-43	P3	Gap	What are the targets for roster edit → storefront latency? Is an audit log (who, when, what) required for clear, delete and move actions?	OI-30. Roster p.19 Metrics: "Roster edit → storefront latency" and "Zero accidental clears/deletes (confirmation-gated); clear/delete actions tracked" (no target or log specified)	A) Latency 5 s or less (p95). Audit log entries for Clear/Delete Roster, bulk delete, team/division delete and move, recording user, time and counts. (recommended)	NFRs can't be sized or tested
Q-44	P3	Gap	How is "roster participation" in the Store Close Report defined, given that rosters are optional and captures are not players?	Settings Epic H: "The rep version is expected to cover total raised, orders and units, roster participation, and profit" vs Roster p.2: "A roster is never required to launch" and Roster p.15: "Captures are not players. They ... are not counted in player counts"	A) Committed players with at least one team-gear order ÷ committed players; show "no roster" teams as N/A and report uncommitted captures separately (recommended) B) Count captures as participants	The Close Report aggregation can't be built consistently with My Team(s) counts
