Prototype Answers — Store Analytics (Reports Tab)

Prototype: input/prototype/Team Stores/ (React .jsx loaded by .dc.html pages; no DB, mock data and localStorage) · Questions: 24 · Answered 5 · Partial 14 · Contradicts 3 · Not in prototype 2

Evidence is cited from `workspace-app-integrated.jsx` (shortened to `wai.jsx`). The Reports tab code in `workspace-app.jsx` is the same, about 10 lines earlier (`function PayoutsTab` is at workspace-app.jsx:12071, and at wai.jsx:12081). Every figure on the Reports tab is computed from one mock field, `store.revenue` (falls back to 3810). So formulas tell us how things are built, but the numbers are only samples.

Screens found

- Workspace Overview dashboard (KPI StatCards, Revenue chart with Day/Month/Year toggle) — wai.jsx:4138, 4172, 4203
- Store workspace tabs: Home, Settings, Orders, Products, My Team(s), Reports (`id: "payouts"`) — wai.jsx:11495-11502
- Store Reports tab (`PayoutsTab`): Close Report entry, Commission strip, 4 KPI cards, Team Revenue chart, Need-to-Order / Bundle cards, Fundraising Report — wai.jsx:12081-12144
- Fundraising Report + Fundraising Report Settings modal — wai.jsx:11854-12079
- Orders tab sub-tabs: All Orders, Pending Orders, Returns & Refunds — wai.jsx:24640-24643
- Settings → Store Details: Team Fundraising toggle + disable interstitial — wai.jsx:10566, 10775; Settings card view — wai.jsx:18604-18630
- Settings → Schedule & Status: Active Order Window card — wai.jsx:18742-18750
- Team Manager Portal (Reporting + Rosters) — wai.jsx:32260-32305
- Store Close Report (summary + detail layers, PDF/CSV) — wai.jsx:32309-33460
- Workspace-level Reports page (account menu) — wai.jsx:37036

Answers

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-1	P1	Answered	The prototype uses the three-state read (Option A). The report renders when the store flag is on, or when any item is still collecting. Turning the store flag off pins only items with orders on (`pteLockState === "full"`) and turns off every other item. So "still collecting" in practice means "has orders". The per-item fundraising column is hidden when the store flag is off, so an item cannot widen.	wai.jsx:12126 — `(store?.fundraisingEnabled === true || fundCollectingItems(store).length > 0)`; wai.jsx:19704 — `filter((p) => itemFundOn(p, store) && itemFundAmount(p) > 0)`; wai.jsx:18505-18512 — `if (pteLockState(p, store) === "full") { ... fundraisingOn: true } ... fundraisingOn: false, fundOffByStore: true`; wai.jsx:19069-19070 — `const fundOn = store?.fundraisingEnabled === true; const priceGridCols = fundOn ? ... : ...`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-2	P1	Contradicts	The Reports tab has more than the three components the Analytics spec lists. At the top is a Store Close Report entry, shown only once the store is Closed or Archived; in Draft/Open it is hidden, not disabled. Under it are a Commission strip, then the KPIs, chart, Need-to-Order/Bundle cards and the Fundraising Report. Settings → Schedule & Status also has a Close Report entry, which shows "Available when the store closes." when the report is not available. Analytics Epic A: "The page stacks three components, in order". Store Status & Lifecycle: "A Store Close Report entry sits at the top of the Reports tab".	wai.jsx:12103-12104 — `<StoreCloseReportEntry store={store} variant="reports" /> <StoreCommissionStrip store={store} />` ; wai.jsx:33408-33409 — `// Reports tab: only surface the entry once a close event has actually produced a report. if (variant !== "settings" && !(available && ev)) return null;` ; wai.jsx:32414 — `return store?.status === "closed" || store?.status === "archived";` ; wai.jsx:12118 — `<NeedToOrderCard stores={[store]} ...`	High
Q-3	P1	Partial	Every KPI card shows a hard-coded % delta with an up or down arrow and the sub-label "vs last month". No period logic exists: values come from `store.revenue` with no date filter, and the deltas are fixed strings. The Close Report repeats the same fixed deltas. Still open: the value period, how the trend is computed, the time zone, and what shows when last month is zero.	wai.jsx:12107 — `<RepStatCard label="Total Revenue" value={repFmt(revenue)} ... delta="12.4%" deltaDir="up" sub="vs last month" />` ; wai.jsx:12089 — `const revenue = store?.revenue || 3810;` ; wai.jsx:32597 — `delta: { v: "12.4%", dir: "up" },`	Low
Q-4	P1	Partial	Clicking the Orders card opens Orders → All Orders. The card count is not derived from the order list: it is `revenue / 46`. All Orders holds rep ("my") orders and fan orders only. Player orders are not a separate origin there, and pending orders sit only in the Pending sub-tab. Refunded orders stay in All Orders, tagged with a refund. Still open: the definition of "closed sale", and whether cancelled or refunded orders count.	wai.jsx:12090 — `const orders = Math.max(Math.round(revenue / 46), 1);` ; wai.jsx:12108 — `label="Orders" ... onClick={onViewAllOrders}` ; wai.jsx:24601-24603 — `// Jump to the All Orders sub-tab when requested (e.g. from the Reports KPI). setSub("all");` ; wai.jsx:24619-24624 — `// All Orders = rep-placed (My) + fan-placed (Fan) …` `.map((o) => ({ ...o, refund: refundByRow[o.id] || null }))` ; wai.jsx:24641 — `{ id: "all", label: "All Orders", desc: "Every rep and fan order" }`	Medium
Q-5	P1	Partial	The Close Report nets refunds and cancellations out of revenue and says so on the report ("net of refunds & cancellations"; Gross sales − refunds = Total revenue). The Reports tab KPI and the Close Report read the same `store.revenue`. The Team Revenue chart spreads that same total across 12 monthly bars, so chart and KPI agree apart from rounding. Still open: whether tax, shipping, fundraising markup, the MOQ fee, discounts and $0 items are included. The Close Report adds MOQ fees into the line totals.	wai.jsx:32471-32475 — `// Refunds / cancellations net OUT of revenue: gross − refunds = Total Revenue. const gross = Math.round((revenue + refundAmount) * 100) / 100;` ; wai.jsx:32594 — `unit: "USD · net of refunds & cancellations",` ; wai.jsx:32531 — `// Scale line pricing so line totals + MOQ fees − refunds == Total Revenue` ; wai.jsx:11746 — `profit: Math.round((total * w) / wsum)`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-6	P1	Partial	The prototype's model: Platform Fees = 5% of Fundraising Collected. Card Processing Fees = 2.9% of Fundraising Collected plus $0.30 per order, so the % part applies only to the fundraising share while the fixed part is charged in full per order. Net = Collected − both fees, rounded to the cent. The platform-fee label can be set per store (`store.platformFeeLabel`). Fundraising Collected itself is a placeholder (18% of revenue). Still open: the real rates and source service, reversal on refund, and the rounding policy.	wai.jsx:11860-11865 — `// ... Modeled off store revenue for the prototype. const collected = Math.round(revenue * 0.18 * 100) / 100; const platformFees = Math.round(collected * 0.05 * 100) / 100; const cardFees = Math.round((collected * 0.029 + orders * 0.3) * 100) / 100;` ; wai.jsx:11856 — `const platformFeeLabel = store?.platformFeeLabel || "Platform Fees";`	Low
Q-7	P2	Partial	The Pending Orders card opens Orders → Pending Orders. That sub-tab is described as "Awaiting MOQ & submission" (not yet submitted to the factory), with a live count badge. The card count is not that badge: it is `orders * 0.17` . The card label is "Pending Orders"; "currently processing" does not appear anywhere. Still open: tying the card count to the sub-tab badge.	wai.jsx:12091 — `const pending = Math.max(Math.round(orders * 0.17), 1);` ; wai.jsx:12109 — `label="Pending Orders" ... onClick={onViewPendingOrders}` ; wai.jsx:24636 — `const pendingCount = (data.pending || []).reduce((n, g) => n + ((g.rows || []).length), 0);` ; wai.jsx:24642 — `{ id: "pending", label: "Pending Orders", desc: "Awaiting MOQ & submission", count: pendingCount }`	Medium
Q-8	P2	Answered	AOV = Total Revenue ÷ Orders count, per order (Option A). The Reports tab and the Close Report use the same formula, and the Close Report labels it "USD per order". Whether $0 orders are excluded is not shown.	wai.jsx:12092 — `const aov = revenue / orders;` ; wai.jsx:32447 — `const aov = orderCount ? revenue / orderCount : 0;` ; wai.jsx:32617-32621 — `unit: "USD per order",` … `foot: \` ${crMoney(d.revenue)} over ${d.orderCount...} orders.``	Medium
Q-9	P2	Partial	The Reports tab chart has fixed monthly bars for the last 12 months, ending at the current month. The current month is highlighted red, and the tooltip says "· current". There is no Day/Month/Year toggle, although the Overview chart has one. The chart does not follow the Fundraising date picker, whose range state is local to the Fundraising Report. Still open: whether to add the toggle, and whether bars are dated by order placed or paid.	wai.jsx:11743-11746 — `const d = new Date(now.getFullYear(), now.getMonth() - (11 - i), 1);` … `current: i === 11` ; wai.jsx:11825 — `background: d.current ? REP_RED : REP_INK` ; wai.jsx:12114-12115 — `<RepPanel title="Team Revenue"> <TeamProfitChart data={revenueData} />` ; wai.jsx:4172-4177 — `function RevenueScaleToggle ... { key: "day", label: "Day" }, { key: "month", label: "Month" }`	High
Q-10	P2	Answered	Option A. The Close Report detail layer and the PDF show a "Team Revenue" chart and trend built from the same gross revenue series, with no profit chart. Leftovers: the internal component is still named `TeamProfitChart` , the data key is `profit` , and an onboarding card still reads "Reports — sales, fundraising, and profit numbers."	wai.jsx:33113-33114 — `<CrPanel title="Team Revenue"> <TeamProfitChart data={d.profitData} />` ; wai.jsx:32451 — `const profitData = buildProfit(revenue); // Team Revenue trend (gross)` ; wai.jsx:32807-32809 — `// Team Revenue trend` … `"TEAM REVENUE"` ; wai.jsx:33493 — `["Reports", "sales, fundraising, and profit numbers."]`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-11	P2	Not in prototype	There is no order→team or team→division attribution behind the Reports tab. Revenue is one store-level number. Close Report rows carry a `teamRoster` value drawn at random from a mock buyer list, so it is sample data, not a rule. Searched: League Revenue, byTeam, division, Unassigned, teamCode near Reports/Close Report code; nothing found that attributes revenue.	searched: "League Revenue", "Unassigned", "byTeam" (only roster capture counts at wai.jsx:11008), "teamRoster" (mock `CR_BUYERS` at wai.jsx:32436) — no revenue attribution logic	Low
Q-12	P2	Contradicts	The chart title is always "Team Revenue", even in league stores, and there is no team/division filter on the Reports tab. The other store tabs check `storeType === "league"` (for example "My Teams"), but `PayoutsTab` never does. Requirement, Analytics Epic C: league store "titled League Revenue … carries a filter control allowing the rep to narrow the revenue shown to a specific team or division". The filter scope and single/multi-select question is still open.	wai.jsx:12114 — `<RepPanel title="Team Revenue">` ; wai.jsx:11501 — `label: (store && store.storeType === "league") ? "My Teams" : "My Team"` (league check used elsewhere, absent in PayoutsTab wai.jsx:12081-12144)	High
Q-13	P2	Contradicts	The Close Report reads only the boolean store flag (Option B). Its Net Fundraising hero, KPI, panel and PDF lines are dropped whenever `fundraisingEnabled` is not true, even when items are still collecting. AOV takes that slot. The Reports tab, however, uses the three-state read (see Q-1), so the two surfaces disagree inside the prototype. Analytics Epic D: "The report renders when Team Fundraising is enabled … or when the store has any item still collecting fundraising despite a store-level disable". Store Status & Lifecycle: "Net Fundraising (only when Team Fundraising is enabled …)".	wai.jsx:32453 — `const fundraisingEnabled = store?.fundraisingEnabled === true;` ; wai.jsx:32587-32588 — `// Net Fundraising only when Team Fundraising is enabled; Avg. Order Value is promoted into that slot when it isn't.` ; wai.jsx:33103 — `{d.fundraisingEnabled && <CrStat label="Net Fundraising" ...` ; vs wai.jsx:12126 — `|| fundCollectingItems(store).length > 0`	High
Q-14	P2	Not in prototype	Fundraising figures are not tied to any order dates, cancellations, refunds or PO state. They are a fixed share of store revenue, and changing the date range does not change them. The Close Report marks some rows `poOpen` and `refunded` , but fundraising is not adjusted for them. Searched: fundraising + refund/cancel/poOpen/orderDate; nothing found.	searched: "collected" in wai.jsx:11862 (revenue-based, no date field), "poOpen" wai.jsx:32495 (not used in fundraising), "refunded" wai.jsx:32552 (revenue only)	Low
Q-15	P2	Partial	The default range is "This season" = `store.storeOpenStart` – `store.storeOpenEnd` , with a fallback of 02/03/26–07/06/26. Year to date starts Jan 1 (calendar year). Only the four presets exist; there is no custom range or date input. The other presets use hard-coded mock dates. Still open: always-on stores, re-opened stores, per-team-code windows, and time zone.	wai.jsx:11867-11869 — `const defStart = new Date(store?.storeOpenStart || "2026-02-03");` ... `React.useState({ start: defStart, end: defEnd })` ; wai.jsx:11879-11884 — `{ label: "This season", start: defStart, end: defEnd }, ... { label: "Year to date", start: new Date("2026-01-01"), end: new Date("2026-07-13") }`	Medium
Q-16	P2	Partial	The sentence reads "…from all N order(s) to-date…", which matches the spec wording. But in the prototype neither the table nor the sentence changes with the selected range: both use the same unfiltered `collected` and `orders` . So the prototype cannot show which scope is intended.	wai.jsx:11958 — `You've currently collected a total fundraising amount of ... from all <strong ...>{orders}</strong> order(s) to-date.` ; wai.jsx:11869 — `const [range, setRange] = React.useState(...)` (range only drives the label at wai.jsx:11908)	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-17	P2	Partial	Modal defaults: Net Fundraising Summary selected, and all three checkboxes off, reset every time the modal opens. "Gross Total Summary" = "Shows only the total fundraising collected before any fees are deducted." Notes come from a "PDF Report Notes" section, but no such section exists in the prototype. The Download PDF button only closes the modal, so no PDF is produced. In the Close Report PDF, gross mode prints "Fundraising collected (gross)". Still open: notes source and length, the range used when "Selected Date Range" is unchecked, file name, branding, and league filter.	wai.jsx:12015-12018 — `useState("net")` `setOpts({ breakdown: false, dateRange: false, notes: false })` ; wai.jsx:12040-12042 — `title="Gross Total Summary"` `sub="Shows only the total fundraising collected before any fees are deducted."` ; wai.jsx:12057 — `'Adds the notes from the "PDF Report Notes" section to the printed report output.'` ; wai.jsx:12067 — `<button onClick={onClose} ...>` (Download PDF); wai.jsx:32833 — `[["Fundraising collected (gross)", crMoney2(d.collected)]]`	Medium
Q-18	P2	Partial	Team Manager Portal "Reporting" renders the same `PayoutsTab` as the rep, with role "manager". The KPI deep links do nothing there, and the full Close Report is shown ("full parity"). The manager also sees the Commission strip ("Commission earned", "Your share"), because no viewer is passed. That conflicts with Settings H: "excludes dealer profit". The Reports tab is always in the store's tab list, with no role or status gate. Archived stores show a "read-only" banner and a READ-ONLY tag on the Close Report entry. Still open: scoping to the manager's own team in league stores, non-owner reps, and dealer-commission visibility.	wai.jsx:32260-32263 — `// 1 — the manager reads the SAME Store Close Report as the rep ... the report itself is at full parity.` `const mstore = ... role: "manager"` ; wai.jsx:32298 — `{tab === "payouts" && <PayoutsTab store={mstore} onViewAllOrders={() => {}} onViewPendingOrders={() => {}} />}` ; wai.jsx:12104 — `<StoreCommissionStrip store={store} />` ; wai.jsx:37078 — `function StoreCommissionStrip({ store, viewer })` ; wai.jsx:11502 — `{ id: "payouts", label: "Reports", dot: !viewed.payouts }` ; wai.jsx:33450-33451 — `{available && store?.status === "archived" && (` … `READ-ONLY`	Medium
Q-19	P3	Partial	The Reports tab is its own page (`PayoutsTab`) with its own components. Its KPI card `RepStatCard` is a copy of the Overview `StatCard` ("identical to the Overview dashboard's StatCard"), not a shared component, so Overview changes would not carry over. The chart and Fundraising Report are separate components. Still open: whether the KPI card must be shared, as "Component ownership" says.	wai.jsx:11750-11751 — `// KPI summary card — identical to the Overview dashboard's StatCard.` `function RepStatCard(...)` ; wai.jsx:4138 — `function StatCard({ label, value, icon, delta, deltaDir = "up", sub, onClick })` ; wai.jsx:11723 — `// Analytical dashboard mirroring the master Overview dashboard`	Medium
Q-20	P3	Partial	The Reports tab has no zero state. When `store.revenue` is 0 it falls back to $3,810, so a store with no orders shows sample figures. The Close Report does handle zero orders: it hides the hero cards and shows "…closed with no orders placed." The Orders tab has "No Pending Orders" empty states. Still open: zero states for the Reports tab KPIs, chart and Fundraising Report, and the trend when the prior month is 0.	wai.jsx:12089 — `const revenue = store?.revenue || 3810;` ; wai.jsx:32582 — `empty: orderCount === 0,` ; wai.jsx:32590 — `if (d.empty) return [];` ; wai.jsx:32950-32951 — `` `... closed with no orders placed.` ``	Medium
Q-21	P3	Partial	The lock trigger is any non-cancelled order (`p.hasOrders`). An item with orders has its design and pricing locked, and "cancelling every order re-enables the rest", which supports Option A. No logic releases the lock at window close or re-open (Option B).	wai.jsx:28846 — `// Lock trigger = any non-cancelled order (data-driven via p.hasOrders)` ; wai.jsx:35644 — `This item has orders, so design and pricing are locked. ... cancelling every order re-enables the rest.` ; wai.jsx:28852-28855 — `return pteHasOrders(p, store) ? "full" : "design";`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-22	P3	Answered	Prototype copy for the mixed-state banner: "Team Fundraising is disabled for this store. {n} item(s) with orders is/are still collecting, so this report stays active. Entered amounts were kept." Scope note: "NOTE: This report only includes price additions that are marked as "Fundraising" on the product edit page." Both show together: the mixed-state banner sits above the report card and the note inside it. The Settings card pill reads "Disabled · {n} items still collecting". The owner still has to sign off the final wording.	wai.jsx:12134 — `<strong ...>Team Fundraising is disabled for this store.</strong> {n} item{n === 1 ? "" : "s"} with orders {n === 1 ? "is" : "are"} still collecting, so this report stays active. Entered amounts were kept.` ; wai.jsx:11963 — `NOTE:</strong> This report only includes price additions that are marked as "Fundraising" on the product edit page.` ; wai.jsx:18631 — `Disabled · {still} item{still === 1 ? "" : "s"} still collecting`	Medium
Q-23	P3	Partial	The prototype calls its shared price-settings logic "Governing rule 3" (the $/% mode and per-row resolution used by item pricing, including fundraising), and has a Settings card that matches Epic A4. This suggests "Store General Settings" = the Settings tab's Store Details section. The documents themselves are not in the prototype. The owner must confirm the names and supply the Products/Catalog spec.	wai.jsx:19725 — `// ———————— Governing rule 3 — shared price settings ($ / % mode) ————————` ; wai.jsx:18604-18605 — `{/* Team Fundraising — view only (edit in modal) */}`	Low
Q-24	P3	Answered	The Active Order Window card's figure is `store.revenue`, the same source as the Total Revenue KPI, so Option A on the data. It is not Fundraising Collected. The label still says "raised this window" or "raised so far" and has not been relabelled. One mismatch: with zero revenue the card shows $0.00 while the Reports KPI falls back to $3,810.	wai.jsx:18562 — `const raised = store.revenue || 0;` ; wai.jsx:18750 — `</span> raised{isSetWindow ? " this window" : " so far"}` ; wai.jsx:12089 — `const revenue = store?.revenue || 3810;`	Medium

Answered — no need to ask the US team

5 question(s) the prototype settles. Remove these from the list sent to the requirement owners.

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-1	P1	What exactly decides whether the Team Fundraising Report renders? Epic A allows an item to have fundraising on while the store flag is off; Settings says that state cannot exist, and Epic D / Dependencies use a three-state read instead.	The prototype uses the three-state read (Option A). The report renders when the store flag is on, or when any item is still collecting. Turning the store flag off pins only items with orders on (`pteLockState === "full"`) and turns off every other item. So "still collecting" in practice means "has orders". The per-item fundraising column is hidden when the store flag is off, so an item cannot widen.	wai.jsx:12126 — `(store?.fundraisingEnabled === true || fundCollectingItems(store).length > 0)` ; wai.jsx:19704 — `filter((p) => itemFundOn(p, store) && itemFundAmount(p) > 0)` ; wai.jsx:18505-18512 — `if (pteLockState(p, store) === "full") { ... fundraisingOn: true } ... fundraisingOn: false, fundOffByStore: true` ; wai.jsx:19069-19070 — `const fundOn = store?.fundraisingEnabled === true; const priceGridCols = fundOn ? ... : ...`	High
Q-8	P2	Is Average Order Value per order or per session, and what numerator and denominator are used?	AOV = Total Revenue ÷ Orders count, per order (Option A). The Reports tab and the Close Report use the same formula, and the Close Report labels it "USD per order". Whether $0 orders are excluded is not shown.	wai.jsx:12092 — `const aov = revenue / orders;` ; wai.jsx:32447 — `const aov = orderCount ? revenue / orderCount : 0;` ; wai.jsx:32617-32621 — `unit: "USD per order",` … `foot: \` ${crMoney(d.revenue)} over ${d.orderCount…} orders.`	Medium

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-10	P2	Should the Store Close Report still show a "Team Profit" chart and trend?	Option A. The Close Report detail layer and the PDF show a "Team Revenue" chart and trend built from the same gross revenue series, with no profit chart. Leftovers: the internal component is still named `TeamProfitChart`, the data key is `profit`, and an onboarding card still reads "Reports — sales, fundraising, and profit numbers."	wai.jsx:33113-33114 — `<CrPanel title="Team Revenue"> <TeamProfitChart data={d.profitData} />`; wai.jsx:32451 — `const profitData = buildProfit(revenue); // Team Revenue trend (gross)`; wai.jsx:32807-32809 — `// Team Revenue trend … "TEAM REVENUE"`; wai.jsx:33493 — `["Reports", "sales, fundraising, and profit numbers."]`	High
Q-22	P3	What is the exact copy for the mixed-state banner and the scope-note banner?	Prototype copy for the mixed-state banner: "Team Fundraising is disabled for this store. {n} item(s) with orders is/are still collecting, so this report stays active. Entered amounts were kept." Scope note: "NOTE: This report only includes price additions that are marked as "Fundraising" on the product edit page." Both show together: the mixed-state banner sits above the report card and the note inside it. The Settings card pill reads "Disabled · {n} items still collecting". The owner still has to sign off the final wording.	wai.jsx:12134 — `<strong ...>Team Fundraising is disabled for this store.</strong> {n} item{n === 1 ? "" : "s"} with orders {n === 1 ? "is" : "are"} still collecting, so this report stays active. Entered amounts were kept.`; wai.jsx:11963 — `NOTE:</strong> This report only includes price additions that are marked as "Fundraising" on the product edit page.`; wai.jsx:18631 — `Disabled · {still} item{still === 1 ? "" : "s"} still collecting`	Medium
Q-24	P3	Is the Active Order Window card's "Total raised" the same figure as the Reports tab's Total Revenue (for the window) or Fundraising Collected?	The Active Order Window card's figure is `store.revenue`, the same source as the Total Revenue KPI, so Option A on the data. It is not Fundraising Collected. The label still says "raised this window" or "raised so far" and has not been relabelled. One mismatch: with zero revenue the card shows $0.00 while the Reports KPI falls back to $3,810.	wai.jsx:18562 — `const raised = store.revenue || 0;`; wai.jsx:18750 — `</span> raised{isSetWindow ? " this window" : " so far"}`; wai.jsx:12089 — `const revenue = store?.revenue || 3810;`	Medium

Still open for requirement owners

- Q-2 (P1, Contradicts): Should the Reports tab have only the 3 spec components, or also the Close Report entry (prototype: hidden until Closed/Archived, not disabled), the Commission strip and the Need-to-Order/Bundle cards? Also pick disabled-vs-hidden for Draft/Open.
- Q-3 (P1, Partial): Define the KPI value period, the trend formula, the time zone and the zero-base display; the prototype has only fixed deltas.
- Q-4 (P1, Partial): Define "closed sale" and confirm how player, cancelled and refunded orders are handled; the prototype's card count is not tied to All Orders (rep + fan only).
- Q-5 (P1, Partial): Decide what is included (tax, shipping, fundraising markup, MOQ fee, discounts, $0 items); the prototype only settles refund netting and KPI = chart sum.
- Q-6 (P1, Partial): Confirm the real fee rates and source, the pro-rating (prototype: % on the fundraising share plus $0.30 per order in full), refund reversal and rounding.
- Q-7 (P2, Partial): Tie the Pending card count to the Pending sub-tab badge ("Awaiting MOQ & submission").
- Q-9 (P2, Partial): Decide whether the chart gets the Day/Month/Year toggle (prototype: fixed 12 months, current month highlighted) and the date basis.
- Q-11 (P2, Not in prototype): Decide the order→team/division attribution rule, the bucket for unassigned orders, and how deleted teams are handled.

- Q-12 (P2, Contradicts): Confirm the League Revenue title and team/division filter (missing in the prototype), its scope, and single- or multi-select.
- Q-13 (P2, Contradicts): The Close Report uses the boolean flag while the Reports tab uses the three-state read. Pick one rule for both.
- Q-14 (P2, Not in prototype): Decide the fundraising date basis and the treatment of cancellations, refunds and open POs.
- Q-15 (P2, Partial): Define "This season" for always-on, re-opened and per-team-code stores, and the time zone; confirm there is no custom range.
- Q-16 (P2, Partial): Decide whether the sentence and the table follow the selected range; the prototype re-scopes neither.
- Q-17 (P2, Partial): Decide the notes source and length limit, the range when "Selected Date Range" is unchecked, and the file name, branding and league scope.
- Q-18 (P2, Partial): Decide manager scoping in league stores, whether managers may see the dealer Commission strip (prototype shows it), and non-owner rep access.
- Q-19 (P3, Partial): Confirm whether the KPI card must be a shared component; the prototype copies it.
- Q-20 (P3, Partial): Specify zero states for the Reports tab; the prototype shows sample figures when revenue is 0.
- Q-21 (P3, Partial): Confirm Option A (unlock only when every order is cancelled), or whether the lock also releases at close or re-open.
- Q-23 (P3, Partial): Confirm the document names and supply the Products/Catalog spec.
