Clarification Questions — Store Home (Home Tab)

Sources: TS-Store Home (Home Tab)-161026-011919.pdf (primary); cross-checked against TS-Store Status & Lifecycle, TS-Launch & Status Controls, TS-Store Settings (Settings Tab), TS-Order Management (Orders Tab), TS-Roster Management (My Team(s) Tab), TS-Store Analytics (Reports Tab), TS-Customize New Product · Total: 39 (P1 3 · P2 16 · P3 20)

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Gap	Appendix A is referenced throughout but is not in the document. Where is it, and which amendments to other specs are approved and scheduled before Home ships?	OI-12. Home Epic A: "The Tabbed Store Dashboard shell must be amended — see Appendix A"; Epic F: "See Appendix A, amendment 8e" and "(Appendix A, 8b)"; Epic G: "(Appendix A, 8d)"; Epic I: "corrected on the same pass (Appendix A, 10)". The PDF ends at Dependencies & Technical Constraints and has no Appendix A.	A) Supply Appendix A and confirm each amendment (6-tab shell, Point of Contact label in Settings, Add from Team Database on the manager card, Team Logo/Colors lock exemption, header chip vocabulary) with its owner and target release. B) Drop the amendments Home can't ship without and narrow Home's scope. Suggest A.	The 6-tab shell change and the Settings label change are hard prerequisites ("Home must not ship ahead of it"). Without the appendix nobody can plan or sequence them.
Q-2	P1	Gap	Which Epic C resolution routes (deep links and filters) exist today, and who builds the missing ones?	OI-14. Home Dependencies: "Where a route needs a filter Home cannot express — C-05's incomplete-player view, C-10's render-pending filter, C-23's exempted-item filter — that filter must be added to the owning tab ... Audit which of those filters exist today and which are new work before estimating." C-05 resolves to "My Team(s) → store-wide player view, filtered to incomplete", but Roster Management offers a store-wide view only for the Roster Bank ("a store-wide view from the My Team(s) home, showing all pending captures"), and Order Management says "the per-player ordered-vs-missing view lives in the My Team(s) tab as a player drawer."	A) Run the audit now and mark each route Exists or New work, with the owning spec: C-02 scroll-to-group, C-05/C-15 store-wide incomplete-player view, C-10 render-pending filter, C-20 "All Orders, filtered", C-23 exempted filter (Settings A4 already has a "Link into the Products tab filtered to those items"), C-27 orphaned filter. B) In v1, routes that don't exist fall back to the unfiltered tab. Suggest A, with B as the fallback.	Estimates and the build plan can't be set; the spec itself calls this "the only item on this page still carrying unknown cost". C-05/C-15 currently route to a view no spec defines.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Conflict	Is the launch gate "≥1 product added" or "≥1 visible product"? Home's C-09/C-16 use visible; the lifecycle and launch specs use added.	OI-6. Home C-09 trigger: "Catalog holds zero visible products"; C-16 trigger: "Store is Draft and ≥1 visible product exists"; Epic J: "Given a Draft store with zero visible products, then C-09 renders at Blocking tier and Home does not offer any launch action". Store Status & Lifecycle: "A Draft store cannot be launched until at least one product has been added". Launch & Status Controls: "the gate is products added, not published; "published" is no longer a valid term, having been replaced by the per-item visibility toggle".	A) Home follows the launch gate: C-09 = zero products added, C-16 = ≥1 product added. B) Change the launch gate to ≥1 visible product (amend Lifecycle Epic A and Launch & Status Controls). C) Keep C-09 on "added" and register a separate Action card for "products added but none visible". Suggest A, because Home may not define a gate.	A Draft store whose only products are hidden gets an enabled Launch button in the header, while Home shows a Blocking "Add a product before you launch" card and no C-16. Governing rule 1 forbids exactly this Home/tab disagreement.
Q-4	P2	Gap	Does the Team Manager Portal get a Home-equivalent area in this version?	OI-13. Home Persona: "OPEN — to be confirmed ... whether the Team Manager Portal gains an equivalent surface ... Recommendation: no, this version ... Confirm before build." Settings A2b: the portal has "exactly two areas — Reporting and Rosters".	A) No: the portal stays at two areas, and Home is rep-only (recommended). B) Yes: add a third area with a permission-filtered resolver, per Home Dependencies "Role scope".	Decides whether the resolver needs a permission-filtered mode and whether portal work is in scope.
Q-5	P2	Conflict	What is the canonical workspace tab set and naming? Home assumes six tabs, including Settings and My Team(s); the lifecycle spec uses Detail and Roster tabs.	OI-25. Home Epic A: "it presents six tabs in order: Home, My Team(s), Products, Orders, Reports, Settings". Store Status & Lifecycle Epic A: "all tabs (Detail, Products, Roster, Orders, Reports) are accessible"; Epic B: "the Store Status card on the Detail tab"; Epic E: "Danger Zone of the Detail tab". Launch & Status Controls: "the Settings tab's Store Status card". Settings: "Schedule & Status ... Store Status card".	A) Canonical set = Home's six tabs; amend Lifecycle to replace "Detail" with Settings → Schedule & Status and "Roster" with My Team(s). B) Something else (please list). Suggest A.	Home's deep links (C-14, C-19 to Settings → Schedule & Status) and the tab-set amendment depend on one agreed tab model. Two specs currently disagree on where Close / Re-open / Archive live.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-6	P2	Conflict	Can C-17 ("Close Report not yet viewed") ever render, given that Home must not read the Close Report seen flag? And where does it route?	OI-5, OI-28. Home Epic B: "The Setup Guide's seen-state remains per rep per store type; the Close Report's remains per user per close event. Home reads neither flag and writes neither." C-17 trigger: "Store is Closed and this user has not seen the report for this close event"; Resolves to "Reports → Store Close Report". Store Status & Lifecycle: "Any dismissal marks the report as seen for that user", shown "on first workspace entry after close", and "The Reports tab owns the on-demand entry point". Settings Epic H: "it remains reachable from the Store Status card in Schedule & Status". Store Analytics Epic A lists only three Reports components (KPI row, revenue chart, Fundraising Report) and no Close Report entry.	A) Retire C-17: the auto-presented modal plus Home's Epic B Close Report route cover the need. B) Keep C-17, amend Epic B to allow reading the seen flag, and define when it can be true after the modal has fired. Also confirm the route: the Reports tab entry (add it to the Store Analytics spec) or Settings → Schedule & Status. Suggest A.	As written, C-17 contradicts Epic B and is effectively never true, because the modal marks the report seen on any dismissal. The route also points at an entry the Reports spec doesn't define.
Q-7	P2	Conflict	Which "pending orders" and "orders" counts does Home read? The Orders tab and the Reports tab define them differently.	OI-27. Home Epic E: "Counts come from the owning tab ... order counts follow the Orders tab's" and the example "24 orders · 4 to submit"; C-01: "n pending orders to submit". Governing rule 1: "Home must not recompute ... any figure the Orders tab, the Active Order Window card, or the Reports tab already resolves." Order Management: Pending Orders "carries a live count badge" and lists orders "placed in the storefront but not yet approved by the rep and sent to the factory". Store Analytics: "Card 3 · Pending Orders — count of active orders currently processing"; "Card 2 · Orders — total volume count of closed sales".	A) Home reads the Orders tab: the Pending badge for C-01 and the overlay, and the All Orders count for the headline. Align the Reports KPI definitions to match. B) Home reads the Reports KPIs. Suggest A, and fix the Reports wording.	The two tabs can show different numbers. Home would then match one tab and "disagree" with the other, which Epic J's "count matches the count on the owning tab exactly" forbids.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-8	P2	Gap	Which freight-blocking manager and address conditions should Home surface, and on which store types? A missing address on an assigned manager blocks submission but has no card, and C-03's scope on Individual Team stores is unclear.	OI-22. Settings A3: "incomplete manager assignments — or a missing destination address on an assigned manager — block pending-order submission". Home C-03 trigger: "≥1 pending group whose group or team manager is unassigned"; C-04 trigger: "Fulfillment method is Ship to Team Manager and the destination address is empty". Settings A2c: "For a single-manager store shipping to the team manager, that address is the ship-to destination." Home population table: on Individual Team stores only "C-07 and C-08 cannot hold", so C-03 can still hold there.	A) Widen C-03 (or register a new card) to cover "assigned manager has no verified address". State that C-03 can't hold on Individual Team stores, and scope C-04 to stores that use the store-level destination. B) Leave it as is and accept the gap. Suggest A.	Stores whose orders are blocked at the freight gate show no Blocking card. That is the "most expensive failure Home can catch" (C-03/C-04 dwell-time metric). The resolver may also evaluate C-03 where no division mapping exists.
Q-9	P2	Gap	Is C-27 (products orphaned by a deleted category) in v1, given that it depends on an unreleased Products Tab amendment?	Home C-27 trigger: "≥1 product whose assigned category no longer resolves, because the category was deleted at workspace level (Product Categories, Epic D; Products Tab)". Dependencies: "C-27 depends on an amendment to Products Tab that must land first ... and must not ship ahead of that amendment".	A) Defer C-27 until the Products Tab amendment ships. B) Commit the Products Tab amendment to the same release. Suggest A unless B is already planned.	The resolver catalogue and card copy include a condition that may have no query behind it. Epic C calls such a condition "not shippable".
Q-10	P2	Conflict	Does C-15 fire at 7 days (the C-14 trigger) or at 14 days? Which spec owns the 14-day threshold?	OI-2. Home C-15 trigger: "C-14's trigger and C-05's trigger both hold"; C-14: "C-14 matches the pill at 7 days. C-15 fires earlier, at 14 days". Governing rule 1: "Home must not recompute ... "days left"". Settings Epic E defines only one threshold: "a "days left" pill that turns urgent (red) inside the final 7 days".	A) C-15 = C-05 plus the 7-day urgent pill (literal trigger). B) C-15 = C-05 plus ≤14 days left, with the 14-day threshold added to Settings Epic E as the owning value. Suggest B if lead time matters.	The trigger contradicts itself, so the resolver would be built wrong either way. Option B as written breaks the no-second-computation rule.
Q-11	P2	Conflict	What tier is C-20 (closed with unsettled payment), and is it gated to Closed stores?	OI-3. Home C-20 row: "Closed with unsettled payment — Action"; Epic I: "C-18, C-20, and C-23 deliberately reassure. All three are Informational conditions". C-20 trigger: "≥1 order in the window with an open PO" (no store state); population table: "C-20 (close-specific)".	A) Informational, Closed only (matches the copy "Payment is still open on these" and the Close Report's "factual, not alarmist" strip). B) Action, Closed only. Suggest A.	The tier drives ordering, rail colour and button treatment. The trigger without a store-state gate would fire on Open stores too.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-12	P2	Gap	What persisted state does "open PO" / "PO settles" read for C-20?	Home C-20: Trigger "≥1 order in the window with an open PO"; Clears when "PO settles". Order Management only captures payment as an entered PO number: "enters payment as a PO Number, confirms billing". Store Status & Lifecycle edge case: "Closed with unsettled payment (open PO) ... Affected orders are flagged in the detail table". No spec defines a PO settlement status.	A) Order Management adds a PO payment status (Open / Settled), with an owner and an update source (finance system or manual). B) Drop C-20 until that status exists. Suggest A, and name the system of record.	C-20 has no query to resolve against, and Home may not define the state itself (Governing rule 1).
Q-13	P2	Gap	How do C-21 and C-22 clear when the rep chooses "keep"? No spec persists a "kept" decision.	OI-8. Home C-21 Clears when: "Records are kept or removed"; C-22 Clears when: "Access is revoked, or the record is confirmed kept". C-21 trigger: "≥1 manager record by a team re-bind whose source team is no longer the connected team". Settings A1: the re-bind modal "asks whether they should be kept or removed. It is a prompt, not an automatic cleanup". Home Governing rule 1: "Home persists nothing about the store."	A) Settings persists the decision (for example, it clears the source-team reference or sets a "kept" flag on Keep), and C-21/C-22 read that. B) C-21/C-22 clear only on removal or revoke, and keeping leaves the card in place. Suggest A.	A kept record still has its old source team, so C-21 stays forever and C-22 (Blocking) stays forever. Both fail the "false on a well-run store" test (Epic J).
Q-14	P2	Gap	Where is the "fixed per-condition rank" for ordering within a tier recorded? The catalogue has no rank column.	OI-1. Home Presentation: "Within a tier, order by cost of delay, defined as a fixed per-condition rank recorded in the catalogue above, not by recency and not by count." The Epic C tables have the columns ID, Condition, Tier, Trigger, Resolves to, Clears when, and no rank.	A) Add a Rank column to the Epic C catalogue (please supply the order). B) Use catalogue ID order within each tier. Suggest A, and B as an interim default.	The order within a tier (and therefore which cards fall into the "n more" expander) is undefined. Epic J requires the same order on every render.
Q-15	P2	Ambiguous	Is the "Which cards populate the list" table exhaustive? Several conditions that can occur on a Draft store aren't listed, and the condition count is wrong.	OI-17. Home: "Draft: C-04, C-08, C-09, C-16 — plus catalog conditions C-10 to C-13"; "What differs is which of the 24 registered conditions can hold." Not listed for Draft: C-07 (League team with no products), C-21/C-22 (re-bind managers), C-23, C-24 (invites), C-27. The catalogue has 25 active IDs (C-01 to C-24 plus C-27; C-25 retired).	A) Exhaustive: the resolver must not evaluate unlisted conditions on Draft stores. B) Illustrative: any condition whose trigger holds may render, and the table should be corrected. Suggest B, and fix the count to 25.	The resolver gating (which Dependencies puts in the resolver, not the view) can't be implemented consistently.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-16	P2	Conflict	Does the resume record store a label or not? And which surfaces and field groups opt in to emitting resume events?	OI-16. Home Epic D: a resume event "is recorded carrying: the acting rep, the store, the surface key ..., an entity reference where one exists, a short human-readable label, and a timestamp". It also says "The label is composed from the entity, not stored as prose". Dependencies lists the record as "acting rep, store, surface key, optional entity reference, field-group or operation identifier, and timestamp" (no label), and says "The write path must be explicitly opt-in per surface". No opt-in list is given.	A) Store a field-group/operation id (no label), compose the label at read time, and supply an opt-in list (surface key, entity type, field group, label pattern) — for example product pricing, roster add/import, division/team edits, Settings sections. B) Store a label snapshot as a fallback for entities without a reference. Suggest A, prioritised on My Team(s).	The schema of the only new persisted record is inconsistent. Each team would also pick qualifying writes differently, so the trail would be inconsistent or would leak non-qualifying writes.
Q-17	P2	Conflict	Should the Settings manager card adopt "Point of Contact" before Home ships, or may Home ship while Settings still says "primary"?	OI-12. Home Epic F: "Settings must adopt the same term, and Home must not ship ahead of it. Settings currently marks the record primary." Settings Epic A: "with the primary record marked"; A2c: "exactly one record is designated primary at all times".	A) Amend Settings to show the "Point of Contact" tag in the same release (Appendix A 8e). B) Home ships with no tag until Settings is amended. C) Both keep "primary". Suggest A.	If this isn't decided it blocks the Home release (by the spec's own rule) or creates two labels for one designation.
Q-18	P2	Ambiguous	Where is the primary / Point of Contact designation changed? Home says not in the manager edit modal; Settings describes designating primary on the manager card.	OI-10. Home Epic F: "The designation is not set in the manager edit modal. It is set in Step 1 — Basics during store creation and in Settings → General. Confirmed on review". Settings A2c (General → League/Team Manager Information card → edit modal): "Changing the primary: Given a non-primary record, when the rep designates it primary, then the previous primary is demoted"; scenario: "adding a second coach to the manager list after setup, or promoting one to primary".	A) Designation is a control inside the shared manager modal: Home must hide or disable it when the modal is hosted on Home, or allow it. B) Designation is a separate control on the Settings card, outside the modal: Home's statement holds. Please confirm which.	Decides whether the "same modal, no Home-local variant" rule can hold, or whether Home needs a parameterised variant.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-19	P2	Conflict	Do Team Logo and Team Colors stay editable after launch? Home says decided; Settings leaves the lock list TBD and doesn't exempt them.	OI-11. Home Epic G: "Team Logo and Team Colors do not lock after launch either — decided, and to be recorded in Settings Epic B's lock list"; Epic J: "all three stay editable after launch". Settings Epic B: "the exact fields/inputs that lock after launch are TBD"; the exempt list names Point of Contact, ship-to address, Team Fundraising, manager collection and Store Customization & Design, but not Team Logo/Colors; "Whether re-binding the store to a different team should be permitted after launch is part of the TBD lock list ... since re-binding changes buyer-visible branding".	A) Exempt Team Logo/Colors in Settings Epic B (Home stands). B) Lock them post-launch: Home renders them read-only on live stores. Suggest A, with Settings sign-off.	If Settings locks them, editing on Home becomes a route around the lock, which Home says must never happen.
Q-20	P3	Conflict	Is C-24 rendered with a blue rail (as Governing rule 2 says) or a neutral rail (as its Informational tier requires)?	OI-4. Home Governing rule 2: "C-07 and C-24 are therefore blue on Home and amber on arrival." Tier table: "Informational — Neutral rail; action is a link or is absent". C-24 row: "Pending team-manager invites never activated — Informational".	A) C-24 stays Informational with a neutral rail; correct the Governing rule 2 sentence to name C-07 only. B) Re-tier C-24 to Action (blue). Suggest A.	The rail colour and button treatment for C-24 are contradictory, and design and QA can't settle them.
Q-21	P3	Ambiguous	If Home echoes header state, how does a Closed (amber) status render, given "no amber anywhere on Home"?	Home Epic A: "Home may echo header state in its summary strip". Governing rule 2: "Amber is not used on Home at all"; Epic J: "Given any card, then no amber is used anywhere on Home." Store Status & Lifecycle Epic G: "Draft (blue), Open (green), Closed (amber)".	A) Home does not echo the status chip. B) Echo it as plain text with no colour. C) Allow the echoed chip in its own colour as the one exception. Suggest A.	The AC can't be settled for a Closed store, and the echo is optional ("may"), so it may or may not get built.
Q-22	P3	Ambiguous	Do Action-tier conditions put a dot on the tab label? Only the Blocking and Informational cases are stated.	OI-19. Home Epic A: "Blocking-tier conditions produce the dot; Informational-tier conditions do not." Dependencies: "Tab-label indicators need the resolver's per-tab roll-up, restricted to Blocking-tier conditions". C-16 resolves to the "Workspace header → Launch control", not a tab.	A) Blocking only (per Dependencies); Action produces no dot. B) Blocking and Action both produce a dot. Suggest A. Also confirm that header-routed conditions add no tab dot.	Nav badges may be built inconsistently.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-23	P3	Gap	C-01 clears when every pending order is "submitted or cancelled". Can a pending order be cancelled?	OI-30. Home C-01 Clears when: "Every pending order is submitted or cancelled". Order Management Pending Orders offers only "Submit Group ... Submit Selected (n), or Submit All"; no cancel action is specified.	A) There is a cancel path (please name the owning spec). B) Remove "or cancelled". Suggest B unless a cancel path exists.	A clear condition with no reachable state; minor resolver ambiguity.
Q-24	P3	Ambiguous	C-02: one card per store, or one per group below MOQ?	Home: "One card per condition, not per record"; C-02 headline "Division 3 is under the minimum to ship" and Resolves to "Orders → Pending Orders, scrolled to that group".	A) One card naming the count (e.g. "2 groups are under the minimum to ship"), routed to the Pending sub-tab. B) One card per group. Suggest A, to follow the per-condition rule.	Copy and routing can't be finalised when more than one group is below MOQ.
Q-25	P3	Ambiguous	Where does C-03 ("Assign managers") send the rep: Settings → Distribution & Fulfillment, or the Orders tab's Assign Managers modal?	OI-29. Home C-03 Resolves to: "Settings → Distribution & Fulfillment, with the affected division auto-opened"; button "Assign managers". Order Management Epic B: "Freight-routing gate ... an Assign Managers modal blocks the flow — collecting the group manager, or a team manager for every unassigned roster, with address verification — and on completion automatically continues to the review modal".	A) Settings → Distribution & Fulfillment (as written). Rename the button (e.g. "Open fulfillment mapping") so it isn't confused with the Orders modal. B) Route to Orders → Pending Orders and trigger the Assign Managers modal. Suggest A.	The same button name points to two different surfaces, and the rep may expect the submit flow to continue afterwards.
Q-26	P3	Conflict	What does "oldest age" mean on C-05, and what should the C-05 detail line show on always-on stores with no close date?	OI-15. Home Presentation: ""Oldest placed 3 days ago" is required on C-01, C-05, and C-06". The C-05 detail line in Epic I is "Window closes date — n of them have no email or phone, so a reminder won't reach them" (no age). Population table: on always-on stores only "C-14, C-15, C-19 cannot hold", so C-05 can render with no window.	A) Drop the age requirement for C-05; on always-on stores omit "Window closes date". B) Define an age (e.g. days since the player was committed). Suggest A.	Copy and resolver output (oldest-affected timestamp) are undefined for C-05.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-27	P3	Gap	Where is the C-05 "opt-out" state defined, and do the My Team(s) completion figures honour it?	OI-31. Home C-05: "A product with Allow opt-out enabled counts a player's "I already own this" as satisfied (Products Tab, Epic E), and a player who has opted out is not counted as missing". Order Management Epic C: each item "shows an ordered state ... or a red "Not ordered" flag" (no opt-out state). Roster Management: "the player's team-gear completion ("n/m team gear items")" (no opt-out). The Products Tab spec isn't in this input set.	A) Opt-out is a defined state (Products Tab Epic E). Order Management Epic C and the Roster Team Gear column must treat it as satisfied, so the counts match. B) Drop the opt-out clause from C-05 until the owning specs support it. Suggest A, with the specs amended together.	The C-05 count can disagree with the My Team(s) completion figure, which breaks "count matches the owning tab exactly".
Q-28	P3	Ambiguous	May C-12 copy use the word "Incomplete"? Is that state label visible to reps on the Products tab?	OI-24. Home Epic I: "C-12 keeps the word bundle but drops "Incomplete" ... Verify whether reps see that state label on the Products tab — if they do, the card may use it". The Products Tab spec (Epic J) and the other referenced owning specs (Product Categories, System Modals & Toasts, Tabbed Store Dashboard, Step 1 — Basics) aren't in this input set.	A) Reps see "Incomplete", so the card may use it. B) It's internal, so keep the current copy. Also please supply the referenced owning specs for verification.	Final C-12 copy is blocked on an unchecked fact, and several Epic C triggers can't be verified against their owning specs.
Q-29	P3	Conflict	C-18 triggers on "not yet shipped" but clears on "Delivered". Which state ends it?	OI-18. Home C-18 Trigger: "Store is Closed with ≥1 order not yet shipped"; Clears when: "Every order reaches Delivered or is cancelled"; copy "n orders are still being made — They'll ship as they're finished". Store Status & Lifecycle edge case: "The detail layer surfaces a prominent count of orders not yet shipped".	A) Clear on Shipped (matches the trigger, the copy and the Close Report). B) Trigger and clear on Delivered, and update the copy. Suggest A.	Between Shipped and Delivered the card's trigger is false but its clear condition isn't met, so the resolver behaviour is undefined.
Q-30	P3	Gap	C-19 clears when a gap is "accepted". Where does a rep accept a coverage gap?	OI-7. Home C-19 Clears when: "Gap is closed or accepted"; "the acceptance is expressed in the owning surface — closing a coverage gap". Settings Epic E only says the scheduler has "coverage-gap detection that flags days between sequential windows where no team is open"; there is no accept action.	A) Add an "Accept gap" action and persisted flag to the Order Window Scheduler (Settings Epic E). B) C-19 clears only when the gap is closed. Suggest A if intentional gaps are common, otherwise B.	An intentional gap leaves a permanent Action card, which fails the "false on a well-run store" test.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-31	P3	Conflict	Who owns the 7-day threshold for C-24 (unactivated invites)?	OI-9. Home C-24 trigger: "≥1 invite in Invited · not logged in beyond a threshold (Store General Settings, Epic A2b)"; "C-24's threshold is 7 days." Settings A2b only defines the status "Invited · not logged in (amber dot)" and has no age threshold. Governing rule 1: "Every count, threshold, and condition on Home is read from the surface that owns it."	A) Add the 7-day threshold to Settings A2b. B) Accept the threshold as Home-owned (an exception to the rule). Suggest A.	The threshold isn't owned by any spec, contrary to Governing rule 1.
Q-32	P3	Ambiguous	Are the resume-trail parameters (5 visible, 15 max, 30-day expiry) final, or still to be tuned?	Home Epic D: "Five visible by default, most recent first, expandable to fifteen. Decided." and "Events expire after 30 days. Decided." But also: "Tune both against the My Team(s) case" and Epic C: "the trail's row count and expiry should be tuned for the My Team(s) case".	A) Final for v1, revisited via metrics. B) Configurable server-side for tuning. Suggest A with B as a cheap hedge.	Minor. It decides whether these values are hard-coded or configurable.
Q-33	P3	Ambiguous	Is the label for the rail's first row literally "My Team(s)", or does it follow a store-type tab label ("My Team" / "My Teams")?	OI-36. Home Epic E: "Each row's label matches its tab's label exactly — the first row reads My Team(s)"; it also notes "the navigation beside it still read My Teams / My Team". Roster Management: "the My Team tab drops straight into that team's roster" (Single-Team) and "the My Teams tab organizes structure" (League).	A) The tab label is literally "My Team(s)" on every store. B) The tab label varies by store type, and the rail row follows it. Please confirm the tab label.	The AC "first row is labelled My Team(s), matching the tab" can't be tested.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-34	P3	Ambiguous	Which Epic C figure is each rail row's attention overlay? Does the rail show "total raised", and is it fundraising or order revenue? And what is the "summary strip"?	OI-20, OI-35. Home Epic E: "Each row carries the tab's headline count and, where one exists, its attention overlay ... "148 players · 5 Roster Bank captures", "24 orders · 4 to submit". The overlay is the same figure the corresponding Epic C card names"; "What Home may show instead: total raised during the window"; "Reports row is a route, not a KPI strip". Epic A: "Home may echo header state in its summary strip". Settings Epic E defines total raised as "an aggregate of order revenue raised during the window", while Home treats it as a fundraising figure ("there is no goal to progress toward"). Several cards resolve to Products (C-09 to C-13, C-23, C-27), and none of their figures is named as the overlay.	A) Define a mapping: My Team(s) = C-06 captures; Orders = C-01; Products = (please choose, or none); Reports = none. Don't show total raised in v1 (or, if shown, label it as the Active Order Window card's figure and confirm whether it is revenue or fundraising); "summary strip" = the In your store rail. B) The overlay = the count of conditions resolving to that tab. Suggest A.	The rail's sub-lines can't be built, and "may" leaves total raised optional with no defined place.
Q-35	P3	Ambiguous	Is leaving Street Address out of the Home Team Managers read view intentional?	OI-34. Home Epic F: "Read view: one row per manager showing Name, Email, Phone, and Contact Preference." Settings Epic A: "Each record's read view shows Name, Street Address (street/apt, city, state, ZIP), Phone Number, Email, and Contact Preference"; Settings A2c: "every manager record carries an address, used for order fulfillment routing".	A) Intentional: the address is visible in the shared edit modal only. B) Add Street Address to the Home read view for parity. Suggest A.	Minor. Reps fixing freight routing from Home may not see the missing address.
Q-36	P3	Conflict	Which labels does Home use for invite status? Home's wording differs from the People & Access labels.	OI-32. Home Epic F: "the row states that status in place of the action — "Portal access active" or "Invited, not signed in""; C-24 headline "n invited managers haven't signed in yet". Settings A2b: "Status is either Active (green dot ...) or Invited · not logged in (amber dot)". Home Governing rule 1: "Home uses the label the owning spec uses."	A) Home reuses the Settings labels ("Active", "Invited · not logged in"), without amber. B) Settings adopts Home's wording. Suggest A.	Two names for the same invite state, against Home's no-new-vocabulary rule.

Q-37	P3	Ambiguous	Has the Settings owner agreed that the "Add from Team Database" open question closes as yes?	OI-33. Settings A1: "OPEN — to be confirmed: whether this re-fetch should be surfaced on the League/Team Manager Information card ... Recommend yes; confirm the surface before build." Home Epic F: "Settings Epic A1's standing open question closes as yes on the strength of this".	A) Yes, confirmed by the Settings owner. B) Not yet; Home's route to Settings → General still works without it.	Home closes another spec's open question unilaterally; the Settings scope needs confirmation.
Q-38	P3	Conflict	Should the owning specs be aligned with Home's bound vocabulary ("group" not "container", no "approve", no "Active")? Home's premise about where "Active" survives is also out of date.	OI-23, OI-26. Home Epic I: "Container is internal shorthand and must not appear on Home"; "There is no approval step in the product"; "Home must not render "Active" — a state that survives only in the stale Launch & Status Controls page". Order Management: "Pending orders are grouped into containers" and "not yet approved by the rep". Settings A3: "maps a freight recipient to every shipping container". Launch & Status Controls (already updated): "the live state was previously named Active; Open and Closed are the names used throughout". Roster Management Epic 7: "whether a move is permitted once the store is Active or Closed". Store Status & Lifecycle: "rep clicks Pause on the Store Status card", "the Active Stores KPI card", and Close Report edge case "Below-MOQ containers still open at close". Home bound terms: "Closed (not Paused / On Hold)".	A) Amend Order Management, Settings, Lifecycle (Close Report "below-MOQ containers") and Roster Management to use the bound terms, and fix the Home note about Launch & Status Controls. B) Accept the divergence in the owning specs. Suggest A.	Home's "no new vocabulary" rule fails if the destination tabs use other words. Reps would see "group" on Home and "container" or "approve" on arrival.

Q-39	P3	Gap	What is the resolver's latency budget? With progressive resolution, how do the cap of five, the "n more" count and failed predicates behave while lower tiers are still loading?	OI-21. Home Dependencies: "The resolver must be cheap enough to run on every workspace entry"; "Conditions are resolved progressively, with Blocking-tier predicates first". Presentation: "the top five are shown ... with a "n more" expander"; Epic J: "cards are ordered ... identically on every render for the same store state". No latency target and no loading or error state are specified.	A) Set a budget (e.g. Blocking cards within a fixed target after entry). Reserve the slots and show a loading row until every tier resolves. If a predicate fails, omit its card and log it, and don't show the "nothing needs you" empty state. B) Render as results arrive and recompute the cap. Suggest A.	There is no testable performance criterion. The list order and expander count can also shift during load, and a failed predicate might show an empty state that looks like "nothing needs you".
