Prototype Answers — Store Home (Home Tab)

Prototype: input/prototype/Team Stores/ (React .jsx loaded by .dc.html pages via support.js; no build, no backend; data from in-file mock generators and localStorage) · Questions: 39 · Answered 8 · Partial 17 · Contradicts 4 · Not in prototype 10

All evidence paths are relative to `input/prototype/Team Stores/`. `Marucci Workspace.dc.html` loads `workspace-app-integrated.jsx` (cited throughout); `Workspace.dc.html` loads the older `workspace-app.jsx`. `export-assets/` was not needed. The Home tab lives in `HomeTab` (workspace-app-integrated.jsx:11131) and the attention model in `buildHomeAttention` (workspace-app-integrated.jsx:11039). Line numbers are from the unminified source.

Screens found

- Store creation wizard (Step 1 Basics ... Step 6 Review) — e.g. `Step6Review` workspace-app-integrated.jsx:9985

Answers

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-1	P1	Partial	No Appendix A in the prototype. But it already builds several of the amendments: the 6-tab shell with Home first, a "Point of Contact" tag on Home's manager rows, and Team Logo/Colors editable after launch. Still open: where Appendix A is, who owns each amendment, and when each ships.	workspace-app-integrated.jsx:1711 — `const WORKSPACE_NAV = [` (first item `{ id: "home", label: "Home", icon: IconHomeGlyph }`); :11292 — `{m.poc && <span ...>Point of Contact</span>}`; :11369 — `{/* Brand assets — editable after launch; only Archived locks it. */}`	Medium
Q-2	P1	Partial	Home cards go to unfiltered tabs, apart from two routes. Pending opens the Orders → Pending Orders sub-tab. "Assign managers" opens Settings → Distribution & Fulfillment with the group/roster focused. Products cards go to the plain Products tab. Roster Bank goes to the plain My Team(s) tab. Filters that already exist elsewhere: a "Render pending" decoration filter in the Products list (C-10), a "still collecting" Products filter fired from Settings, and a store-wide "Not ordered only" player view. That player view is in **Reports** ("Still need to order"), not My Team(s). There is no exempted-item filter, no orphaned-category filter and no scroll-to-group. Still open: the audit and who builds the missing filters.	workspace-app-integrated.jsx:11146 — `if (card.kind === "products") onGoTab("products");`; :11427 — `const jumpToManagers = (groupId, rosterId) => { setManagerFocus(...); setSettingsSection("distribution"); setTab("general"); };`; :29277 — `opts: ["All", "Not decorated", "Render pending", ...]`; :11507 — `const h = () => { window.__pteFilterCollecting = true; setTab("products"); };`; :36994 — `onClick={() => setOnlyMissing((v) => !v)} ... Not ordered only` (in `NeedToOrderPage`, opened from `PayoutsTab` :12100)	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-3	P1	Contradicts	The prototype uses **products added**, not visible products, everywhere. Home's Blocking card fires on zero products and the launch card fires on one or more. The header Launch button and the draft banner use the same count. Hidden products (`p.hidden`) aren't checked. This matches Lifecycle / Launch & Status Controls ("at least one product has been added"). It contradicts Home C-09 "Catalog holds zero visible products" and C-16 "≥1 visible product exists".	workspace-app-integrated.jsx:11047 — `if (((store.products || []).length) === 0) {` → `title: "Add a product before you launch"`; :11050 — `title: "Your store is ready to launch"`; :11459 — `const canLaunch = (store.products || []).length > 0;`	High
Q-4	P2	Answered	The Team Manager Portal has exactly two areas, REPORTING and ROSTERS, and no Home-equivalent. Home is rep-only (option A).	workspace-app-integrated.jsx:32259 — `const NAV = [{ id: "payouts", label: "REPORTING" }, { id: "roster", label: "ROSTERS" }];`	High
Q-5	P2	Answered	Six tabs: Home, My Team(s), Products, Orders, Reports, Settings. There is no "Detail" or "Roster" tab label. Close / Re-open Store live in Settings → Schedule & Status (option A). Note that the legacy non-embedded strip orders the same six tabs differently (Home, Settings, Orders, Products, My Team(s), Reports). The side-rail order matches Home's spec.	workspace-app-integrated.jsx:1711-1717 — `{ id: "home", label: "Home" ... }, { id: "roster", ... }, { id: "products" ...}, { id: "orders" ...}, { id: "payouts", label: "Reports" ...}, { id: "general", label: "Settings" ...}`; :31668 — `{ id: "schedule", label: "Schedule & Status", desc: "Order window & close dates" }`; :18818 — `Re-open Store`; :18821 — `Close Store`; :11497-11502 (legacy order)	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-6	P2	Contradicts	Home shows "Your close report is ready" (grey, Informational) on **every** Closed store. It doesn't read the seen flag, so the card is not conditioned on "not yet seen". This differs from C-17's trigger "this user has not seen the report for this close event". The card opens the Close Report overlay in place (review mode); it doesn't route to the Reports tab. The auto modal does read and write the seen flag. On-demand entries exist at the top of Reports and in Settings → Schedule & Status.	workspace-app-integrated.jsx:11087-11088 — `if (lc.closed) { cards.push({ tone: "grey", kind: "report", link: true, title: "Your close report is ready", ...` ; :11153 — `window.dispatchEvent(new CustomEvent("closereport:open", { detail: { layer: "summary" } }))` ; :33365 — `if (crIsSeen(store, ev)) return;` ; :33403-33404 — `// variant "reports" → top of the Reports tab` / `// variant "settings" → Settings → Schedule & Status → Store Status card`	High
Q-7	P2	Partial	Home reads the same pending dataset as the Orders tab (option A). Pending = rows across pending groups, which is also the formula for the Orders "Pending Orders" badge. The headline is pending + submitted orders. The Reports KPIs come from a separate mock formula (revenue/46, 17% pending), so in the prototype the Reports figures don't match Home or Orders. Still open: aligning the Reports KPI definitions.	workspace-app-integrated.jsx:11002-11004 — `const pending = pendingGroups.reduce(function (n, g) { return n + ((g.rows ...).length); }, 0);` / `return { pending, submitted, total: pending + submitted, pendingGroups };` ; :24645 — `const pendingCount = (data.pending ...).reduce((n, g) => n + ((g.rows ...).length), 0);` ; :12090-12091 — `const orders = Math.max(Math.round(revenue / 46), 1);` / `const pending = Math.max(Math.round(orders * 0.17), 1);`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-8	P2	Partial	The C-03-like card ("needs a manager before their orders can ship") only evaluates on **Open League** stores, for groups in "teams" mode. A manager counts as incomplete when name, valid email, valid phone **or address** is missing, so a missing address is already covered (as option A suggests). It never runs on Individual Team stores. The C-04-like card ("Add a delivery address") is **Draft-only** and checks `store.shipStreet` without checking the fulfillment method. Still open: whether C-04 should also hold on Open stores and be gated by fulfillment method.	workspace-app-integrated.jsx:11056 — `if (lc.open && (store.storeType ...) === "league" && org) {` ; :13251 — `return !!(hasName && isValidEmail(m.email) && isValidPhone(m.phone) && String(m.address ...).trim());` ; :11052-11053 — `if (!String(store.shipStreet ...).trim()) { cards.push({ tone: "red", ... title: "Add a delivery address before orders can ship"` (inside `if (lc.draft)`)	High
Q-9	P2	Not in prototype	No orphaned-product / deleted-category card or filter. Searched: orphan, "no longer resolves", deleted category, C-27 in Home code — no match.	searched: orphan, category deleted, C-27 in `buildHomeAttention` — no match	—
Q-10	P2	Partial	There is no C-15 card (window closing plus incomplete players). Home's only window card is grey "Ordering window closes ... days left", shown whenever the store is Open and has a close date, with no 7-day or 14-day threshold. Home **recomputes** days left itself (`Math.ceil` against the real clock), while Settings uses `Math.round` against a fixed date and turns urgent at ≤7. The two figures can differ, which is the second computation Governing rule 1 forbids. Still open: the C-15 threshold and who owns it.	workspace-app-integrated.jsx:11028 — `const daysLeft = Math.max(0, Math.ceil((end - new Date()) / 86400000));` ; :11091-11092 — `if (lc.open && close) { cards.push({ tone: "grey", kind: "schedule", ...` ; :18555 — `const today = new Date("2026-06-04");` ; :18564 — `const winUrgent = !closed && daysLeft <= 7;`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-11	P2	Not in prototype	Home has no "closed with unsettled payment" card. Open POs appear only in the Close Report as an attention line and a red "open" PO cell. Searched: "unsettled", poOpen, openPO in `buildHomeAttention` — no match.	searched: unsettled, poOpen, openPO, "Payment is still open" in Home code — no match (exists only in Close Report, workspace-app-integrated.jsx:33058)	—
Q-12	P2	Partial	The only PO state is a mock boolean `poOpen` on Close Report order rows. It is shown as "· open" (title "Unsettled payment") and counted as `openPO`. The Orders tab captures only a PO Number. There is no settlement status, owner or update source. Still open: the system of record and the status model.	workspace-app-integrated.jsx:32928-32929 — `render: (o) => o.poOpen ? <span title="Unsettled payment" ...> {o.poNumber} · open</span>` ; :33058 — `if (d.openPO) attention.push(... "with an unsettled payment (open PO).")` ; :23938 — `PO Number`	Low
Q-13	P2	Not in prototype	There is no team re-bind flow, no keep/remove prompt and no C-21/C-22 cards.	searched: re-bind, rebind, "kept or removed", source team, keep — no match	—
Q-14	P2	Partial	There's no rank column. Cards sort by tier only (red → blue → grey). The sort is stable, so within a tier the order is the fixed order of the `push` calls: Blocking = add product / delivery address (Draft); assign managers, then images failed (Open). Action = launch; pending orders, then Roster Bank. Informational = close report, orders still being made, window closes. Still open: the real cost-of-delay rank.	workspace-app-integrated.jsx:11096-11097 — `const rank = { red: 0, blue: 1, grey: 2 };` / `cards.sort(function (a, b) { return rank[a.tone] - rank[b.tone]; });`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-15	P2	Partial	The prototype gates conditions by lifecycle in code. Draft runs only add product / launch and delivery address. Open runs assign managers, images failed, Roster Bank and window closes. Pending orders runs on any non-Draft, non-Archived store. Closed runs close report and orders still being made. Archived runs none. So it behaves as an exhaustive gate, but only 9 conditions are built, not 25. Still open: whether the spec table is exhaustive, and the count.	workspace-app-integrated.jsx:11045-11046 — `if (!lc.archived) { if (lc.draft) {` ; :11073 — `if (lc.open && failed.length) {` ; :11079 — `if (oi.pending > 0) {` ; :11082 — `if (lc.open && bank.total > 0) {`	High
Q-16	P2	Not in prototype	There is no resume-event record or write path. "Recently worked on" is three hard-coded rows (name string, relative time, tab label), shown only on seeded non-Draft stores. Backend schema can't be answered from the front end.	searched: resume, surface key, field group, opt-in, trail event — only the mock array at workspace-app-integrated.jsx:11192 (`const trail = (!store.seeded ...) ? [] : isLeague ? [ ... ]`)	Low
Q-17	P2	Partial	Home tags the record "Point of Contact". Settings has no per-manager card with a primary marker. It has a store-level "Store Point of Contact" panel (email/phone source: Team Manager / Salesperson / Custom) in Store Details. The creation wizard's Review step still tags the record "Primary Contact". So the prototype has two labels for the same designation. Still open: the Settings/wizard label decision and release order.	workspace-app-integrated.jsx:11292 — `Point of Contact` ; :18637-18639 — `{/* Store Point of Contact — moved into Store Details ... */}` … `Store Point of Contact` ; :10032 — `{m.primary && <span title="The Store Point of Contact inherits from this record" ...>Primary Contact</span>}`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-18	P2	Answered	There is no control to designate or promote primary. The primary is always the main manager entered in Step 1 / Store Details. Additional managers are extra contact records that never become primary. The Store Point of Contact source was moved out of the manager modal into the Store Details edit modal. Home's Edit on the POC row opens Settings → Store, and Edit on other rows opens the manager mapping. This supports Home's statement (option B) and differs from Settings A2c's "designates it primary".	workspace-app-integrated.jsx:10021 — `{[{ id: "primary", primary: true, firstName: data.firstName, ... }, ... (data.additionalManagers ...)]`; :8478 — `Only the primary feeds the point of contact.`; :10818 — `{/* Store Point of Contact — moved here from the manager modal */}`; :11299 — `onClick={function () { m.poc ? onGoSettings("store") : onManagers(null); }}`	Medium
Q-19	P2	Answered	Team Logo and Team Colors stay editable after launch, both on Home and in Settings. Home hides Edit only when the store is read-only (Archived). The Settings Store details card's Edit is unconditional, and its modal edits logo and colors with no lock check (option A).	workspace-app-integrated.jsx:11369 — `{/* Brand assets — editable after launch; only Archived locks it. */}`; :11378 — `{!readOnly && <HomeLinkBtn label="Edit ›" onClick={function () { onGoSettings("store"); }} />}`; :18573 — `<DetailCard title="Store details" onEdit={() => setEditing("details")}>`; :10750 — `<ColorSwatches colors={f.teamColors ...} onChange={(v) => set("teamColors", v)} />`	Medium
Q-20	P3	Partial	There is no C-24 (invites) card. Informational cards in general use a neutral grey rail and a link-style action, not blue. The only blue cards are launch, pending and Roster Bank. Still open: the rail for C-24 once it is built.	workspace-app-integrated.jsx:11112 — `const rail = card.tone === "red" ? "#e1251b" : card.tone === "blue" ? "#2563eb" : "#d4d4d8";`; :11037 — `// Rail tones: red = blocking, blue = action, grey = informational. Never amber,`	High
Q-21	P3	Contradicts	Home has a status strip that echoes the header chip in its own colour. Closed renders as an **amber** pill, marked in code as "the one place amber is allowed" (option C). This contradicts Home's "Amber is not used on Home at all" / "no amber is used anywhere on Home".	workspace-app-integrated.jsx:11225 — `{/* Status strip — the one place amber is allowed (canonical Closed pill). */}`; :11164 — `: lc.closed ? { label: "Closed", bg: "#fdf3d3", color: "#8a6408", dot: "#d9a514" }`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-22	P3	Answered	Only red (Blocking) cards with a `navTab` add a tab dot. Action (blue) and Informational (grey) cards never do. The launch card has no `navTab`, so header-routed conditions add no dot (option A). Separately, the rail also keeps older "not yet viewed" dots.	workspace-app-integrated.jsx:11101-11103 — `// Red dot on a nav tab only when a red-rail card resolves to it.` / `if (c.tone === "red" && c.navTab) s.add(c.navTab);` ; :11547-11552 — `general: !viewed.general ... homeRed.has("general")`	High
Q-23	P3	Partial	Home's pending card clears only when the pending row count reaches 0. There's no cancel action in the Pending Orders sub-tab. Products-tab copy does imply that orders can be cancelled from the Orders tab. Still open: whether a pending order can be cancelled, and from where.	workspace-app-integrated.jsx:11079 — `if (oi.pending > 0) {` ; :28929 — `Cancel the blocking orders from the Orders tab first — once every order is cancelled, delete is permitted.`	Low
Q-24	P3	Not in prototype	Home has no below-MOQ card. MOQ appears only as the Pending Orders sub-tab description and in the Close Report.	searched: MOQ, "minimum to ship", "under the minimum" in Home code — no match (Orders nav desc only, workspace-app-integrated.jsx:24649)	—
Q-25	P3	Answered	"Assign managers" goes to Settings → Distribution & Fulfillment with the first affected group/roster focused (option A, as written). It doesn't open the Orders Assign Managers modal or continue the submit flow. The button keeps the label "Assign managers".	workspace-app-integrated.jsx:11069 — `action: "Assign managers" });` ; :11149 — `else if (card.kind === "assign") onManagers(card.target);` ; :11427 — `setSettingsSection("distribution"); setTab("general");`	High
Q-26	P3	Not in prototype	There is no C-05 (incomplete players) card. The only "oldest" text on Home is a hard-coded string on the pending-orders card, not a computed age.	searched: incomplete, missing players, "have no email or phone", C-05 in Home code — no match; pending detail is static text at workspace-app-integrated.jsx:11080 (`"Oldest placed 3 days ago — ..."`)	—

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-27	P3	Partial	Opt-out is a defined product setting on Team Required items: "Allow opt-out" / "'I already own this' counts as satisfied". The My Team(s) player drawer shows only ordered or "Not ordered" with an "n/m team gear items" count, so it doesn't show an opt-out state. Home has no C-05. Still open: whether Orders and My Team(s) treat opt-out as satisfied.	workspace-app-integrated.jsx:19353 — `{ key: "optOut", label: "Opt-out allowed", desc: "“I already own this” counts as satisfied.", ...}` ; :16559 — `{g.orderedCount}/{g.total} team gear items` ; :15891 — `Not ordered`	Medium
Q-28	P3	Answered	Yes. Reps see "Incomplete" on the Products tab: the bundle card label "Incomplete — needs a second item", plus a toast and delete-warning copy that use the word (option A).	workspace-app-integrated.jsx:34391 — `Incomplete — needs a second item` (in `ProductCatalogCard`); :35534 — `onToast("Incomplete — the bundle needs a second item before it can go visible")`	High
Q-29	P3	Partial	Home's "n orders are still being made" card counts **all** submitted orders on a Closed store (rep plus fan orders) and ignores order status. It clears neither on Shipped nor on Delivered. Order statuses Shipped and Delivered do exist in the Orders data. Still open: which state ends the card.	workspace-app-integrated.jsx:11089 — `if (oi.submitted > 0) cards.push({ tone: "grey", kind: "orders", ... " still being made"` ; :11003 — `const submitted = (data.myOrders ...).length + (data.fanOrders ...).length;` ; :22598-22599 — `"shipped": { label: "Shipped", ...}, "delivered": { label: "Delivered", ...}`	High
Q-30	P3	Partial	The Order Window Scheduler shows an "n-day coverage gap" notice with no Accept action and no persisted flag. Home has no C-19 card. Still open: whether to add an accept action.	workspace-app-integrated.jsx:18374 — `<strong ...>{gap.days}-day coverage gap</strong> between ... — no team code is accepting orders in that span.`	High
Q-31	P3	Not in prototype	There is no invite-age threshold and no C-24 card. People & Access shows only a status ("Active" / "Invited · not logged in").	searched: threshold, 7 days, invite age, C-24 — no match (status only at workspace-app-integrated.jsx:31967)	—
Q-32	P3	Not in prototype	The trail is a fixed mock of three rows with no expander, no 5/15 cap and no expiry.	searched: expire, 30 days, fifteen, "show more" in Home trail — no match; mock at workspace-app-integrated.jsx:11192	Low

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-33	P3	Contradicts	The tab label varies by store type: "My Teams" (League) or "My Team" (Individual). The rail's first row uses the same rule, so the row matches the tab (option B). This contradicts the requirement's literal "the first row reads My Team(s)".	workspace-app-integrated.jsx:1721 — `const labelFor = (it) => it.id === "roster" ? ((store && store.storeType === "league") ? "My Teams" : "My Team") : it.label;` ; :11214 — `{ id: "roster", label: isLeague ? "My Teams" : "My Team", sub: st.players + " players", ...`	High
Q-34	P3	Partial	Rail overlays: My Team(s) = Roster Bank captures (blue). Products = "n render failed" (red; this matches the images-failed card, not C-09 to C-13). Orders = "n to submit" (blue). Reports = "Store analytics" with no KPI. The "summary strip" is the status strip at the top, not the rail. It shows the status pill, close date / days left, the order count and "$n raised this window". The raised figure is `store.revenue` (order revenue), and its mock fallback is 3810. Still open: whether "raised" means revenue or fundraising, and what the Products overlay should be.	workspace-app-integrated.jsx:11213-11217 — `const storeRows = [ { id: "roster", ... extra: bank.total ? ...` , `{ id: "products", ... failedProducts.length + " render failed" ...` , `{ id: "orders", ... oi.pending + " to submit" ...` , `{ id: "payouts", label: "Reports", sub: "Store analytics" }` ; :11142 — `const raised = lc.draft ? 0 : (store.revenue ...(store.seeded ? 3810 : 0));`	Medium
Q-35	P3	Answered	Home's manager rows show name, the Point of Contact tag and one line with email · phone · contact preference. Street Address isn't shown (option A). Rows with no details show "No contact details yet".	workspace-app-integrated.jsx:11294 — `{[m.email, m.phone, m.pref].filter(Boolean).join(" · ") ... "No contact details yet"}`	High
Q-36	P3	Partial	Home rows show no invite status at all. Every non-POC row shows an "Invite" link to Settings, so neither "Portal access active" nor "Invited, not signed in" appears. Settings → People & Access uses "Active" and "Invited · not logged in" (with an amber dot). Still open: Home's wording, and whether Home should show status in place of the action.	workspace-app-integrated.jsx:11298 — `{!m.poc && <HomeLinkBtn label="Invite" onClick={function () { onGoSettings("store"); }} />}` ; :31964-31967 — `Active` / `Invited · not logged in`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-37	P3	Not in prototype	There is no "Add from Team Database" action on a manager card. The Team Database picker exists only in the Store Details edit modal and the wizard, where it selects the team. It isn't a manager re-fetch. Owner sign-off is a business decision.	searched: "Add from Team Database", re-fetch — no match; `TeamDatabaseModal` only at workspace-app-integrated.jsx:8593, :10824	—
Q-38	P3	Partial	Home's own copy avoids "container", "approve" and "Active". The Orders tab still shows reps "Containers are keyed to a division or team", and the Close Report says "n containers closed below minimum quantity". So arriving reps do see "container". Still open: amending the owning specs and screens.	workspace-app-integrated.jsx:23716 — `Containers are keyed to a division or team.` (in `PendingOrdersList`); :33059 — `` `${d.moqOpen.length} container${...} closed below minimum quantity.` ``	High
Q-39	P3	Not in prototype	Home computes everything synchronously from in-memory mock data, so there's no progressive loading, no loading row, no latency budget and no failed-predicate handling. This is a backend/performance concern.	searched: loading, skeleton, latency, error, catch in `HomeTab` / `buildHomeAttention` — no match	—

Answered — no need to ask the US team

8 question(s) the prototype settles. Remove these from the list sent to the requirement owners.

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-4	P2	Does the Team Manager Portal get a Home-equivalent area in this version?	The Team Manager Portal has exactly two areas, REPORTING and ROSTERS, and no Home-equivalent. Home is rep-only (option A).	workspace-app-integrated.jsx:32259 — `const NAV = [{ id: "payouts", label: "REPORTING" }, { id: "roster", label: "ROSTERS" }];`	High

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-5	P2	What is the canonical workspace tab set and naming? Home assumes six tabs, including Settings and My Team(s); the lifecycle spec uses Detail and Roster tabs.	Six tabs: Home, My Team(s), Products, Orders, Reports, Settings. There is no "Detail" or "Roster" tab label. Close / Re-open Store live in Settings → Schedule & Status (option A). Note that the legacy non-embedded strip orders the same six tabs differently (Home, Settings, Orders, Products, My Team(s), Reports). The side-rail order matches Home's spec.	workspace-app-integrated.jsx:1711-1717 — `{ id: "home", label: "Home" ... }, { id: "roster", ... }, { id: "products" ...}, { id: "orders" ...}, { id: "payouts", label: "Reports" ...}, { id: "general", label: "Settings" ...}` ; :31668 — `{ id: "schedule", label: "Schedule & Status", desc: "Order window & close dates" }` ; :18818 — `Re-open Store` ; :18821 — `Close Store` ; :11497-11502 (legacy order)	High
Q-18	P2	Where is the primary / Point of Contact designation changed? Home says not in the manager edit modal; Settings describes designating primary on the manager card.	There is no control to designate or promote primary. The primary is always the main manager entered in Step 1 / Store Details. Additional managers are extra contact records that never become primary. The Store Point of Contact source was moved out of the manager modal into the Store Details edit modal. Home's Edit on the POC row opens Settings → Store, and Edit on other rows opens the manager mapping. This supports Home's statement (option B) and differs from Settings A2c's "designates it primary".	workspace-app-integrated.jsx:10021 — `{[{ id: "primary", primary: true, firstName: data.firstName, ... }, ... (data.additionalManagers ...)]` ; :8478 — `Only the primary feeds the point of contact.` ; :10818 — `{/* Store Point of Contact — moved here from the manager modal */}` ; :11299 — `onClick={function () { m.poc ? onGoSettings("store") : onManagers(null); }}`	Medium

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-19	P2	Do Team Logo and Team Colors stay editable after launch? Home says decided; Settings leaves the lock list TBD and doesn't exempt them.	Team Logo and Team Colors stay editable after launch, both on Home and in Settings. Home hides Edit only when the store is read-only (Archived). The Settings Store details card's Edit is unconditional, and its modal edits logo and colors with no lock check (option A).	workspace-app-integrated.jsx:11369 — `{/* Brand assets — editable after launch; only Archived locks it. */}`; :11378 — `{!readOnly && <HomeLinkBtn label="Edit ›" onClick={function () { onGoSettings("store"); }} />}`; :18573 — `<DetailCard title="Store details" onEdit={() => setEditing("details")}>`; :10750 — `<ColorSwatches colors={f.teamColors ...} onChange={(v) => set("teamColors", v)} />`	Medium
Q-22	P3	Do Action-tier conditions put a dot on the tab label? Only the Blocking and Informational cases are stated.	Only red (Blocking) cards with a `navTab` add a tab dot. Action (blue) and Informational (grey) cards never do. The launch card has no `navTab`, so header-routed conditions add no dot (option A). Separately, the rail also keeps older "not yet viewed" dots.	workspace-app-integrated.jsx:11101-11103 — `// Red dot on a nav tab only when a red-rail card resolves to it.` / `if (c.tone === "red" && c.navTab) s.add(c.navTab);`; :11547-11552 — `general: !viewed.general ... homeRed.has("general")`	High
Q-25	P3	Where does C-03 ("Assign managers") send the rep: Settings → Distribution & Fulfillment, or the Orders tab's Assign Managers modal?	"Assign managers" goes to Settings → Distribution & Fulfillment with the first affected group/roster focused (option A, as written). It doesn't open the Orders Assign Managers modal or continue the submit flow. The button keeps the label "Assign managers".	workspace-app-integrated.jsx:11069 — `action: "Assign managers" });`; :11149 — `else if (card.kind === "assign") onManagers(card.target);`; :11427 — `setSettingsSection("distribution"); setTab("general");`	High

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-28	P3	May C-12 copy use the word "Incomplete"? Is that state label visible to reps on the Products tab?	Yes. Reps see "Incomplete" on the Products tab: the bundle card label "Incomplete — needs a second item", plus a toast and delete-warning copy that use the word (option A).	workspace-app-integrated.jsx:34391 — `Incomplete — needs a second item` (in `ProductCatalogCard`); :35534 — `onToast("Incomplete — the bundle needs a second item before it can go visible")`	High
Q-35	P3	Is leaving Street Address out of the Home Team Managers read view intentional?	Home's manager rows show name, the Point of Contact tag and one line with email · phone · contact preference. Street Address isn't shown (option A). Rows with no details show "No contact details yet".	workspace-app-integrated.jsx:11294 — `{[m.email, m.phone, m.pref].filter(Boolean).join(" · ") ... "No contact details yet"}`	High

Still open for requirement owners

- Q-1 (P1, Partial): supply Appendix A and confirm owner and release for each amendment. The prototype already assumes the 6-tab shell, the Point of Contact tag and editable logo/colors.
- Q-2 (P1, Partial): run the route audit. Render-pending and collecting filters exist in Products. The incomplete-player view exists in Reports, not My Team(s). Exempted, orphaned and scroll-to-group don't exist.
- Q-3 (P1, Contradicts): choose "added" (what the prototype does everywhere) or "visible" (Home spec) for C-09/C-16 and the launch gate.
- Q-7 (Partial): align the Reports KPI definitions with the Orders counts Home reads.
- Q-8 (Partial): decide whether C-04 should also hold on Open stores and be gated by fulfillment method. The prototype is Draft-only and ungated.
- Q-10 (Partial): set the C-15 threshold and its owner. Also stop Home recomputing "days left" differently from Settings.
- Q-12 (Partial): define the PO settlement status and its system of record. The prototype has only a mock `poOpen` flag.
- Q-14 (Partial): supply the within-tier rank. The prototype uses code order.
- Q-15 (Partial): decide whether the population table is exhaustive, and correct the count.
- Q-17 (Partial): resolve the labels. Home says "Point of Contact", the wizard says "Primary Contact", and Settings has only a store-level "Store Point of Contact".
- Q-20 (Partial): set the rail for C-24 (not built yet).
- Q-23 (Partial): confirm whether pending orders can be cancelled.
- Q-27 (Partial): make Orders and My Team(s) treat opt-out as satisfied.
- Q-29 (Partial): decide whether C-18 ends on Shipped or Delivered. The prototype ignores status.
- Q-30 (Partial): decide whether to add an Accept action for coverage gaps.
- Q-34 (Partial): define the Products overlay, and whether "raised" means revenue or fundraising.

- Q-36 (Partial): set Home's invite-status wording, and decide whether Home shows status in place of "Invite".
- Q-38 (Partial): amend the Orders and Close Report wording ("container").
- Q-6 (Contradicts): decide whether to retire C-17 or condition it on the seen flag. The prototype shows the card on every Closed store and opens the overlay, not the Reports tab.
- Q-21 (Contradicts): decide whether the amber Closed pill on Home's status strip is allowed.
- Q-33 (Contradicts): decide between the literal "My Team(s)" and the store-type label (what the prototype does).
- Q-9, Q-11, Q-13, Q-16, Q-24, Q-26, Q-31, Q-32, Q-37, Q-39 (Not in prototype): owner decisions are still needed: C-27 timing, C-20 tier/gate, re-bind keep persistence, resume-record schema and opt-in list, C-02 granularity, C-05 age, C-24 threshold owner, trail parameters, Add from Team Database sign-off, resolver latency and loading behaviour.
