Clarification Questions — Store Settings (Settings Tab)

Sources: TS-Store Settings (Settings Tab)-161026-094514.pdf (primary); cross-checked against TS-Store Status & Lifecycle, TS-Launch & Status Controls, TS-Order Management (Orders Tab), TS-Roster Management (My Team(s) Tab), TS-Store Analytics (Reports Tab), TS-Store Home (Home Tab), TS-Customize New Product · Total: 26 (P1 4 · P2 9 · P3 13)

"Settings" in the table means TS-Store Settings (Settings Tab). Page numbers refer to the PDF. Source IDs (OI-n) are the open items in implementation-summary.md.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Gap	Which Settings fields lock once a store is launched? Please list each field as Locked or Editable. In particular: Store Name, web address, Store Type/format, Store Schedule, Collect Sales Tax/State, Fulfillment Method, Jersey Number Selection, Allow Duplicate Numbers, Team Logo and Team Colors.	OI-1, OI-22. Settings p.4: "once launched, a (still-TBD) subset locks". Settings Epic B p.15: "the exact fields/inputs that lock after launch are TBD and must be defined before build (likely candidates touch fulfillment, tax, format/timeline, and the web address)". Store Home Epic J: "the Team Logo, Team Colors, and Store Theme Color ... all three stay editable after launch" and "Team Logo and Team Colors do not lock after launch either — decided, and to be recorded in Settings Epic B's lock list".	Suggested: A) Lock web address, Store Type, Fulfillment Method and Collect Sales Tax/State. Leave the Schedule, Store Name, branding (per Home), roster rules and jersey mode editable. B) Lock all four "likely candidates" and also Store Name. C) Lock nothing at MVP and add locks later. Already decided as editable: Point of Contact, ship-to address, Team Fundraising, manager collection and both Customization & Design controls.	The store-state edit-permission layer can't be built. Live stores risk changes that disrupt orders, or locks that block legitimate fixes. Home and Settings already disagree on branding.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-2	P1	Ambiguous	How is the ship-to destination stored relative to the primary manager's address and a saved Pick-up Location? (a) In a store with several managers, is the destination always the primary manager's address? (b) Does selecting a Pick-up Location overwrite the primary manager's address, or replace it with a reference? (c) Does clearing the destination also clear the primary manager's address, which the Mapping says is "required"? (d) When the primary manager changes, does the destination move with them?	OI-8. Settings A2c p.12: "For a single-manager store shipping to the team manager, that address is the ship-to destination." A3 p.12–13: "the same address held on the store's primary manager record (Epic A2c) — not a third copy" and "A selected location is held as a reference, not a copy". A3 p.13: "Given the rep clears the destination address ... the save succeeds". Dependencies p.25: "a single persisted field shared by three surfaces — Step 1 — Basics Epic F, the Fulfillment Method card here, and the primary manager record". Mapping p.13: "the address is required for order fulfillment".	A) Keep a store-level destination field that holds either a typed address or a Pick-up Location reference. It is pre-filled from the primary manager's address but never written back, and manager addresses stay independent. (Recommended.) B) Destination is always the primary manager's address field. Pick-up Location and clearing write through to that manager record. C) Use A for single-manager stores and B for multi-manager stores.	The core data model for fulfillment, the freight gate and Step 1 Epic F can't be designed. A wrong choice could ship freight to the wrong person or silently erase a manager's address.
Q-3	P1	Conflict	What should a team manager see in the Store Close Report? Should they get a separate scoped variant that excludes dealer profit (Settings), or full parity with the rep including export (Lifecycle)? How is it delivered: emailed on close, shown in the Team Manager Portal, or auto-presented in the workspace?	OI-13, OI-5. Settings Epic H p.19: "a separate variant is generated for team managers with portal access ... scoped to what that manager can see ... It excludes dealer profit and any figure outside that manager's scope" and "whether the manager version is emailed on close or only surfaced in-portal" (OPEN). Store Status & Lifecycle, Roles & permissions: "Team-manager role: full parity with the rep for this report — a team-manager-role user may view and export everything the report contains ... No separate dealer or decorator view is required." Settings A2b p.10: the portal has "exactly two areas — Reporting and Rosters".	A) Use a scoped manager variant with no dealer profit and no rep margins, shown in the portal's Reporting area with no email. (Matches Settings, recommended.) B) Give full parity per Lifecycle, using the same report and exports. C) Use the scoped variant, also emailed as a PDF on close.	Two incompatible report projections and permission models. Taking Lifecycle literally could expose dealer profit to coaches.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-4	P1	Gap	What is the Announcement Message's maximum length, and which rich-text features are allowed (bold, italic, lists, headings, links)?	OI-7. Settings Epic I p.21: "Character limit and permitted marks — OPEN. A ceiling on message length and the permitted rich-text feature set (in particular whether links are allowed) are undecided and implementation-blocking". Dependencies p.25: "Rich text requires a sanitizing renderer on the storefront — script, embed, iframe, and event-handler content stripped".	Suggested: A) 500 characters with bold, italic, bulleted lists and links (https only, opened in a new tab). B) 1,000 characters with bold, italic and lists, no links. C) Plain text only, 280 characters.	The editor configuration, sanitizer allow-list and banner layout can't be built. The spec itself calls this implementation-blocking.
Q-5	P2	Conflict	Should managers entered in other places all write into the single manager collection? This covers the Orders "Assign Managers" modal, the division/team detail components in My Team(s), and the Home Team Managers panel. Or are fulfillment-mapping managers a separate list?	OI-19. Settings A2c p.11: "Records originate in three places — Step 1 — Basics ..., coach import ..., or here — and all three write the same collection." Store Home Epic F: "writable from Settings, Step 1, and coach import, and now from Home, all against the same persisted collection". Order Management Epic B: "an Assign Managers modal blocks the flow — collecting the group manager, or a team manager for every unassigned roster, with address verification". Roster Management: mapping is configurable "directly on the division and team detail components; both surfaces read and write the same state".	A) Yes. Every surface, including Orders' Assign Managers and the division/team detail components, creates records in the one manager collection, and mapping only references them. (Recommended.) B) Mapping and Assign Managers keep their own manager entries, separate from the contact collection.	Duplicate or orphaned manager records, plus inconsistent invites, point-of-contact sources and freight routing.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-6	P2	Gap	What does a Team Database coach record contain? In particular, does it carry a mailing address and a role/title? If there is no address, how is an imported manager handled when the address is required for fulfillment mapping or the ship-to destination?	OI-4. Settings A2c p.12: "OPEN: whether Team Database coach records carry an address that could populate this on import". Dependencies p.24: "The Team Database coach schema — specifically whether records carry a mailing address and a role or title — is an open dependency". Mapping p.13: "the address is required for order fulfillment".	A) Records include an address: map it on import and verify it through the map service. B) No address: import name, email and phone only, and flag the record "Address needed" before it can be mapped or used as the destination. C) No address: block selecting the record for mapping until one is added.	Import field mapping, validation and the freight-gate behavior for imported managers can't be finalized.
Q-7	P2	Gap	On a single-team Ship-to-Team-Manager store with no destination address, what happens at pending-order submission? Should the submit flow collect the address inline, like Assign Managers does, or hard-block and route the rep to Settings → Distribution & Fulfillment?	OI-23. Settings A3 p.13: "pending orders cannot be submitted for fulfillment until an address exists". Order Management Epic B: "Given a submission that includes a group whose fulfillment routing is unresolved (missing group/team manager), then an Assign Managers modal blocks the flow ... and on completion automatically continues to the review modal". The Orders gate doesn't mention a missing destination address. Store Home C-04: "No ship-to destination address" is a Blocking card.	A) Extend the Orders gate with an inline destination step that writes the shared destination field, then continue to review. (Recommended.) B) Hard-block with a message and a link to Settings → Distribution & Fulfillment.	The Orders freight gate and Settings disagree, so a missing address could be shipped to nowhere or leave the rep stuck.
Q-8	P2	Conflict	Does the post-launch lock apply only while a store is Open, or also while it is Closed? Lifecycle says a Closed store's workspace is fully editable, and Launch says Closed is "technically equivalent to a draft".	OI-15. Settings Epic B p.15: "Given a launched store ... a subset of fields becomes non-editable". Settings Epic D p.17: "products, roster, orders, settings remain editable — unlike archiving". Store Status & Lifecycle Epic B: "Given the store is Closed ... all content remains fully editable." Launch & Status Controls: "Closed suspends ordering (technically equivalent to a draft)".	A) The lock applies to both Open and Closed, since any launched store has orders. (Recommended, as existing orders keep processing while Closed.) B) Open only, so Closed is fully editable again. C) Open only, but Closed stores with any non-cancelled order keep fulfillment and tax locked.	The edit-permission layer can't decide which state to check. Unlocking while Closed could change fulfillment or tax under in-flight orders.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-9	P2	Gap	Can a rep re-bind a launched (Open or Closed) store to a different team with Change Team? If so, what happens to custom products whose designs were pre-filled with the old team's name, colors and logos?	OI-2. Settings Epic B p.16: "Whether re-binding the store to a different team should be permitted after launch is part of the TBD lock list and should be decided explicitly, since re-binding changes buyer-visible branding on a live storefront." Customize New Product C1/C2: the customizer "auto-populates Team Name, Team Colors, and Logos from the store's branding" and "Custom items carry a permanent design lock on commit".	A) Allow it on Open and Closed stores with a confirmation that states the buyer-visible branding change, while committed product designs are not changed. B) Allow re-bind only while the store is a Draft. C) Allow it only while the store is Closed.	Change Team availability on live stores is undefined, and the storefront could show mismatched branding between store chrome and products.
Q-10	P2	Ambiguous	How do the Order Window Scheduler and repeating close dates interact with the store lifecycle? (a) With per-team-code windows, which date auto-closes the store: the store-level close, the last team window, or neither? (b) With a repeating cadence (Weekly, Every 2 weeks, Monthly), does the store go Closed on each close date and generate a Close Report? If so, how does it reopen, given Lifecycle says re-open is manual only? (c) What date does "End of season" resolve to?	OI-17. Settings Epic E p.17–18: "the rep can schedule at store level or per team code" and "League stores can turn the single window into a repeating close cadence — Weekly, Every 2 weeks, Monthly, or End of season — with the next close date derived from the current one". Store Status & Lifecycle, Valid transitions, Closed → Open: "Manual only — rep clicks Re-open Store on the Store Status card." Lifecycle Epic C: auto-close fires "when a pop-up store's configured close date/time is reached".	A) Only the store-level close date changes store status. Team-code windows and repeating cycles gate ordering per team without closing the store, and a Close Report is generated only on store close. B) Each repeating close date closes the store, with a new Close Report, and the system automatically re-opens it for the next cycle, which amends Lifecycle. C) Each repeating close date closes the store and the rep re-opens it manually. "End of season" would need a season end-date field.	The auto-close job, Close Report triggers and the coverage-gap logic can't be specified. A repeating cadence is meaningless if each close needs a manual re-open.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-11	P2	Gap	In "Team manager chooses on behalf of players" mode, what does a buyer see when their team has no roster, or when they aren't on it? Rosters are optional. Also, can the mode be switched after orders exist, and what happens to orders already placed?	Settings Epic F p.18: "Team manager chooses on behalf of players (numbers assigned on the roster; buyers see their assigned number, no entry at checkout)" and "Selecting a mode saves immediately with a confirmation toast". Roster Management: "A roster is never required to launch, and a team may exist with no roster attached."	A) If there's no roster or no roster match, fall back to the buyer entering a number for that order. B) Block purchase of personalized items until the player is on the roster. C) Allow the order without a number and the rep adds it later. Mode switches affect only future orders, since order lines are snapshots.	The buyer product-page and checkout behavior for a common case (no roster) is undefined, risking garments ordered without numbers.
Q-12	P2	Gap	What are the fields and values in Catalog & Decoration? What are the seller scope options and the art policy choices beyond the default? Who turns on the store's "third-party vendor enabled" flag, and where? Does seller scope also filter the Add Products SOURCE pill and its sources?	OI-26. Settings Epic G p.19: "Seller scope: which sellers' catalogs the store may pull products from. Art policy: how third-party decoration/art is handled — including the default policy that blocks publishing until art is cleared." Customize New Product Epic A: the SOURCE pill "resolves against QX7 and offers only the brands that rep's dealership is entitled to sell".	A) Seller scope is a multi-select of entitled third-party sellers that also filters the SOURCE pill. Art policy is Block until cleared (default) or Allow with rep approval. The flag is set by a Prolook admin. B) Seller scope is independent of the SOURCE pill, and the flag is set by the rep in Settings. Please provide the actual field list.	The section can't be built. Its interaction with brand entitlement and licensing enforcement is unknown.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-13	P2	Conflict	What is the definitive Store Close Report spec for the rep? Is it Lifecycle's summary layer plus a detail layer with a full order table and exports, or Settings' "year in review rather than a data table"? Which metric set applies, given "profit", "profit split", "Team Profit chart" and "Team Profit trend" all appear? Is the primary entry point the Reports tab or the Store Status card?	OI-5, OI-14. Settings Epic H p.19: "a high-summary, celebratory retrospective — a 'year in review' treatment rather than a data table" and "The rep version is expected to cover total raised, orders and units, roster participation, and profit" (OPEN). Dependencies p.26: " (revenue, orders, units, roster participation, profit split, top products)". Store Status & Lifecycle: "Summary layer ... Detail layer — the full order-level operational record", "Plus the Team Profit chart for the window", Summary PDF "the Team Profit trend", "Primary entry point — Reports tab". Store Analytics Epic C: "Renamed from the Team Profit chart ... with that input removed, the chart reports revenue".	A) Adopt Lifecycle as the owner: summary plus detail layers and exports, with Reports tab primary and Store Status card secondary. Replace every Team Profit reference with Team Revenue, and treat "profit" as dealer profit for the rep version only. (Recommended.) B) Adopt the Settings summary-only format with no detail layer. Either way, confirm the exact hero metric list.	Two specs describe different reports, and one still references a metric that no longer exists. The aggregation job and UI can't be built.
Q-14	P3	Ambiguous	Are "Detail tab", "Store Detail Tab", "Store General Settings spec" and "Pause" in other specs the same thing as Settings → Schedule & Status → Store Status card → "Close Store"? Please confirm the canonical labels.	OI-27. Store Status & Lifecycle: "Manual (rep clicks Pause on the Store Status card)", "Archive Store in the Danger Zone of the Detail tab", "referenced in Store Detail Tab Epics C–D". Launch & Status Controls: "see the Store General Settings spec". Settings Epic A p.7: "Store Status card → Close / Re-open Store". Store Home Epic A: tabs are "Home, My Team(s), Products, Orders, Reports, Settings".	A) Yes, they're the same. Rename to "Settings tab", "Store Settings spec" and "Close Store" everywhere. B) They're different surfaces. Please specify each.	UI labels and deep links get mismatched, and the referenced epics are confusing.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-15	P3	Ambiguous	Is Roster Rules (Allow Duplicate Numbers) editable in two places, the Edit Store Details modal in General and the Roster Rules card in Team & Roster, or is the modal reference out of date?	OI-9. Settings Epic A p.7: the Edit Store Details modal "edits ... the Roster Rules and Team Fundraising toggles". Dependencies p.24 says the same. Settings Epic A/F p.7, p.18: "Team & Roster. Roster Rules card (Allow Duplicate Numbers — a bulk default over per-roster settings, see Epic F)".	A) The modal reference is out of date. Edit only on the Team & Roster card. (Recommended.) B) Both surfaces write the same bulk value.	A duplicate control, or an inconsistent mixed-state display.
Q-16	P3	Conflict	Should "Add from Team Database" appear on the League/Team Manager Information card? Settings leaves it OPEN, but Home records it as decided.	OI-3, OI-21. Settings A1 p.9: "OPEN — to be confirmed: whether this re-fetch should be surfaced on the League/Team Manager Information card as well (e.g. an 'Add from Team Database' action beside 'Add manager') ... Recommend yes". Store Home Epic F: "Home's panel does not offer Add from Team Database. Settings' manager card does. Decided."	A) Yes, add it to the manager card beside "Add manager", using the same selection flow as A1. (Recommended, matches Home.) B) No, keep it only inside the connect-to-team component.	An undecided UI entry point, and two specs disagree.
Q-17	P3	Gap	In the Store Point of Contact, which salesperson do "Salesperson Email/Phone" refer to: the store-owner rep, or one picked from the salesperson directory? Is the value live-bound like Team Manager mode or copied when saved?	OI-10. Settings A2 p.10: "Email channel: one primary email selected from Team Manager Email (default), Salesperson Email, or Custom Email." Dependencies p.23: "salesperson/contact directory".	A) The store-owner rep, live-bound to their profile. B) Picked from the directory and live-bound. C) Picked from the directory and copied when saved.	The point-of-contact resolution and storefront footer data source are unclear.
Q-18	P3	Ambiguous	Which manager records get the launch email "the store was created": the primary only, every manager record with an email, or only invited portal users? Is that consistent with "manager records ... send no email"?	OI-24. Launch & Status Controls: "all players and the team manager receive an email that the store was created and can purchase team goods". Settings A1 p.9: importing a coach "provisions no account, sends no email". Settings A2b p.10: "Manager records are not invitations."	A) The primary manager only. B) Every manager record with an email, as a one-time informational email that grants no access. C) Only managers with an active or pending portal invite.	The notification recipient list is undefined, and coaches could get emails they didn't expect.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-19	P3	Conflict	Should the designated manager be labeled "Primary" (Settings) or "Point of Contact" (Home)? Where is the designation changed: in the manager card's edit modal, or only in a separate control in Settings → General?	OI-20. Settings A2c p.11: "exactly one record is designated primary" and "Given a non-primary record, when the rep designates it primary ... The modal states this before saving". Store Home Epic F: "The designated record is tagged 'Point of Contact'", "Bare Primary is banned", "Settings must adopt the same term", "The designation is not set in the manager edit modal. It is set in Step 1 — Basics ... and in Settings → General."	A) Use "Point of Contact" everywhere, with the designation control on the Settings manager card outside the shared edit modal. (Matches Home.) B) Keep "Primary" and amend Home.	Two labels for one designation, and an unclear location for the designation control.
Q-20	P3	Gap	Two Team Fundraising edge cases. (a) What fundraising toggle state should items get if they're added while store-level fundraising is OFF, and what state do they take when it's re-enabled, given they had no state "before the disable"? (b) What does re-enable restore for an item that was exempt at the time of the disable and later released?	OI-12. Settings A4 p.13: "New items added after this point default their toggle to on." A4 p.14: "every item returns to the enabled/disabled state it held immediately before the disable". A4 p.15: "If every order against an exempted item is later cancelled, its commercial lock releases and the store-level disable applies to it from that point."	A) New items added while OFF get a stored toggle of ON (applied on re-enable). Released exempt items restore to ON, the state they had before the disable. B) New items added while OFF default to OFF on re-enable.	The prior-state retention logic is incomplete and re-enable results are unpredictable.
Q-21	P3	Conflict	Can a Draft store be archived? Who can reverse an archive: support only, or a "managing rep"? Which state does a restored store return to, Open or Closed?	OI-16. Settings Epic C p.16: "Given a store, when the owning rep opens Schedule & Status, then an Archive Store action is available" and "the action can only be undone by support". Store Status & Lifecycle, Archived definition: "restoring an archived store can only be done by a managing rep". Lifecycle transitions: "Archived → Open or Closed ... Support staff only". Lifecycle only lists Open → Archived and Closed → Archived.	A) No archiving from Draft. Reversal by support only, restoring to Closed. (Recommended.) B) Allow archiving from Draft. Reversal by support, restoring to the pre-archive state.	Archive availability and the support tooling are unclear.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-22	P3	Ambiguous	What does "total $ amount raised" on the Active Order Window card measure: gross revenue (buyer spend), or net fundraising collected?	OI-25. Settings Epic E p.17: "the card shows the total $ amount raised during the window". Dependencies p.27: "an aggregate of order revenue raised during the window". Store Home Epic E treats it as fundraising, noting "the Active Order Window card reports total raised with no target". Store Analytics Epic C: team revenue is "gross buyer spend ... not fundraising collected".	A) Gross revenue during the window, relabeled "Total revenue". B) Net fundraising collected, relabeled "Fundraising raised". C) Show both.	The wrong figure on a headline card, and it won't match Reports or Home.
Q-23	P3	Ambiguous	Should the Order Window Scheduler show reps team codes, or team/division names (with the code as secondary reference)?	OI-18. Settings Epic E p.17: "a searchable, status-sorted table of team codes with start/end/timezone per row". Roster Management: "team codes moved to backend-only" and "Codes remain visible in the workspace for reference and support".	A) Show team/division names first with the code as a muted secondary column, keyed by code internally. (Recommended.) B) Codes only, as in the current spec.	Reps may not recognize the codes, which hurts scheduler usability.
Q-24	P3	Conflict	In the Store Close Report, should the Net Fundraising hero figure and the fundraising breakdown show when the store is in the "disabled with exemptions" state, meaning items are still collecting?	Store Status & Lifecycle, Report contents: "Net Fundraising (only when Team Fundraising is enabled; Avg. Order Value is promoted into this slot when it is disabled)". Settings A4 p.15: "Reporting follows the same three states. The Fundraising Report ... renders in the enabled state and in the disabled-with-exemptions state".	A) Yes. Follow the three-state read and show it in Enabled and Disabled-with-exemptions. (Recommended.) B) No, show it only when the store flag is enabled.	Fundraising money that is still being collected could be missing from the close summary.
Q-25	P3	Gap	Should the theme color picker warn about, or block, colors with poor contrast against button label text? What threshold should it use?	OI-6. Settings Epic I p.20: "Contrast — OPEN. Whether the picker warns or blocks on a color with insufficient contrast against button label text is undecided".	A) Warn only, below WCAG AA 4.5:1. B) Block below 4.5:1. C) Automatically switch the button label to black or white for contrast, with no warning.	Accessibility risk on storefront buttons, and undefined validation.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-26	P3	Conflict	On a Closed store, does a saved Announcement Message edit go live immediately or only on re-open? The banner is hidden while the store is Closed, so is the "without re-opening a closed store" clause meant to say the edit is stored now and shown on re-open?	OI-11. Settings Epic I p.21: "when the message is saved, then the storefront banner reflects it without a republish and without re-opening a closed store". Settings Epic D p.17: "The announcement banner does not render in this state" and "changes are not reflected on the storefront until the store is re-opened". Store Status & Lifecycle Epic D supports Epic D.	A) Saves are live immediately on Open stores. On Closed stores the edit is stored and appears on re-open, so the Epic I wording should be amended. (Recommended.) B) The announcement shows on the Closed landing page.	The storefront render rules contradict each other.
