Clarification Questions — Store Status & Lifecycle

Sources: TS-Store Status & Lifecycle-161026-094525.pdf (Lifecycle), cross-checked against TS-Launch & Status Controls (Launch), TS-Store Settings (Settings Tab) (Settings), TS-Store Home (Home Tab) (Home), TS-Store Analytics (Reports Tab) (Reports), TS-Order Management (Orders Tab) (Orders), TS-Roster Management (My Team(s) Tab) (Roster), TS-Customize New Product (Customize) · Total: 34 (P1 3 · P2 19 · P3 12)

All questions concern the Lifecycle spec. Cross-document conflicts quote both documents. Every summary open item OI-1 to OI-22 appears in the Source column of at least one question. Rows marked "Consolidator finding" are issues the summary did not raise.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	How do repeating close dates and per-team-code order windows map onto the single store status (Open/Closed)?	Consolidator finding (no OI). Lifecycle §Closed: "automatically when a pop-up store's configured ordering window close date is reached"; Transitions: "Closed → Open: Manual only — rep clicks Re-open Store" vs Settings Epic E: "League stores can turn the single window into a repeating close cadence — Weekly, Every 2 weeks, Monthly, or End of season"; "schedule at store level or per team code — ... start/end/timezone per row"	A) Every repeating close date closes the whole store, generates a Close Report, and the rep must re-open it manually each time. B) Repeating dates and team-code windows are order cut-offs only: the store stays Open, buyers of a team whose window has ended are blocked, and the store auto-closes only at the store-level close date. Suggest B, and define "End of season"	The auto-close scheduler, the Close Report trigger and the storefront gating can't be built. Option A would force a manual re-open every week

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-2	P1	Gap	What is the role and permission model for lifecycle actions? Who is the "owner", what is a "managing rep", what can a non-owner rep do, and do team managers ever enter the workspace?	OI-21. Lifecycle §Archived: "restoring an archived store can only be done by a managing rep"; Transitions: "Rep only" (launch, re-open), "Owner only" (archive); Epic E: "a rep who is not the owner opens the Detail tab"; Close Report: "an invited team-manager-role user each see the auto-trigger" on "first workspace entry" vs Settings Epic A2b: the portal has "exactly two areas — Reporting and Rosters (no products, orders, settings, or vault)"; Settings Epic C: Danger Zone "hidden for manager-role users"; Roster §Solution: "store managers (reps, team managers, league directors) build and manage team structure"	Supply a matrix of roles (owner rep, co-rep, team manager in portal, league director) against actions (launch, close, re-open, archive, edit while Closed, view and export Close Report). Suggest: owner = the creating rep; co-reps can do everything except archive; team managers use only the portal and never see the workspace or lifecycle controls	Permission checks, button visibility and the Close Report audience can't be implemented, and non-owners may be able to archive or close stores

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Conflict	Which Store Close Report definition is authoritative: Lifecycle or Settings Epic H? This covers the team-manager version, seen-state scope, whether the modal blocks the workspace, tone and metric set	OI-12, OI-14, OI-16. Lifecycle §Roles: "Team-manager role: full parity with the rep for this report"; "Seen state is per user"; Epic H: modal shown "before any other workspace content is actionable"; principles: "restraint ... Celebratory framing is suppressed wherever the data does not support it" vs Settings Epic H: "a separate variant is generated for team managers ... It excludes dealer profit"; "It gates nothing and blocks no action"; "a high-summary, celebratory retrospective"; deps: "a seen/dismissed flag per rep"; "OPEN — to be confirmed: the exact metric set on each version"; Home Governing rule 1: "Home never blocks, never gates"	A) Lifecycle wins: one report with team-manager parity, per-user seen state and a blocking modal. B) Settings wins: a rep report plus a scoped manager variant in the portal, seen state per rep, non-blocking. Suggest A for the rep, plus a scoped read-only manager variant in the portal Reporting area. Also confirm the final metric list	The report's data model, permission scoping and modal behavior would be built twice or wrongly, and team managers could see dealer margins
Q-4	P2	Conflict	Does the launch gate count any added product (including hidden ones, and custom products that are staged but not yet committed), or only visible products? Does the gate also apply to re-opening a store that now has zero products?	OI-5. Lifecycle §Draft: "cannot be launched until at least one product has been added"; Launch: "the gate is products added, not published" vs Home C-09: "Catalog holds zero visible products"; C-16: "Store is Draft and ≥1 visible product exists"; Customize Epic C: the item "returns staged as a custom product" and is configured "before commit"	A) Gate = at least one committed product, visible or hidden; Home C-09/C-16 reworded to "added". B) Gate = at least one visible product; Lifecycle and Launch amended. Suggest A, and apply the same check to Re-open	The header Launch button and the Home cards will disagree, and a store can go live with nothing buyers can see

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P2	Conflict	Is the workspace fully editable while Open and Closed, or does a post-launch lock list apply?	OI-6. Lifecycle §Open: "The rep has full management access"; matrix: Open "Fully editable", Closed "Fully editable — changes go live on re-open"; Epic B: "all content remains fully editable" vs Settings Epic B: "Given a launched store ... a subset of fields becomes non-editable"; "the exact fields/inputs that lock after launch are TBD and must be defined before build"	A) Lifecycle wording stays and means "every field not on the Settings lock list". B) Nothing locks after launch. Suggest A, with Lifecycle amended to reference the lock list once it is defined	Edit permissions by state can't be implemented or tested, and fields that should lock (tax, fulfillment, web address) stay editable on live stores
Q-6	P2	Gap	If a pop-up store is re-opened after its close date has passed and the schedule isn't changed, what happens?	OI-10. Lifecycle §Closed: "The store can be re-opened to Open at any time"; Epic C: "they can re-open to Open from the Store Status card and optionally edit the store schedule"; Home: extending a window "on a store that has already auto-closed ... additionally requires a Re-open"	A) Re-open requires a future close date or a switch to Always open. B) Re-open is allowed and the store stays open until it's manually closed. C) The store re-closes immediately. Suggest A	A re-opened store may close again instantly or run with no deadline, and the "days left" pill and C-14 have no valid date
Q-7	P2	Ambiguous	What does "Suspended — does not advance" mean for a pop-up window while the store is manually Closed? Do the dates shift? Does the close date still fire while the store is Closed, and does that create a second close event?	OI-11. Lifecycle matrix, Ordering window, Closed: "Suspended — does not advance"; §Closed: entered "manually (rep pauses from the Store Status card) or automatically" vs Settings Epic E: "a progress bar between the open and close dates with a 'days left' pill"	A) Dates are fixed: the countdown keeps running, and a close date that passes while the store is Closed creates no new event. B) The close date is pushed back by the length of the pause. Suggest A	The scheduler may fire duplicate close events and reports, or shift dates the rep didn't expect

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-8	P2	Conflict	Who can un-archive a store, and which state does it return to?	OI-1. Lifecycle §Archived: "restoring an archived store can only be done by a managing rep" vs Transitions: "Archived → Open or Closed: Not self-service. Requires a Prolook support request. Support staff only."; Epic E: "no self-service reversal path exists in the product UI"; Settings Epic C: "can only be undone by support"	A) Support staff only, using an internal admin tool, and the store is always restored to Closed. B) A managing rep can do it in the UI. Suggest A, and restore to Closed so the rep re-opens it deliberately	Un-archive permissions and the support tooling scope are undefined
Q-9	P2	Conflict	Where are archived stores listed, and how does a rep open an archived store's read-only workspace and Close Reports?	OI-8. Lifecycle matrix: "Removed from list entirely"; Epic E: "the store no longer appears in the list"; Epic G: "Archived is not a filter option" vs Launch: "their cards appear only in the Archived Stores section of the Account page"; Home: "opening an Archived store and seeing a read-only summary"	A) An Archived Stores section on the Account page is the only entry point (spec it in Lifecycle, and give the Archived badge a color). B) An "Archived" filter on the Stores tab. Suggest A	The read-only archive and its retained reports, which the spec promises to keep, can't be reached
Q-10	P2	Gap	What happens to pending (unsubmitted) orders when a store is archived?	Consolidator finding (no OI). Lifecycle matrix, Archived: "Existing / in-flight orders: Unaffected — retained as read-only history"; "Read-only — all records viewable, nothing editable" vs Orders Epic A: pending orders are "placed in the storefront but not yet approved by the rep and sent to the factory"; Orders Epic B: "Submit Group ... Submit Selected ... Submit All"	A) Block Archive while any pending orders exist. B) Allow Submit as the one action permitted on an archived store. C) Cancel and refund pending orders on archive. Suggest A	Paid orders could be stranded and never reach the factory

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-11	P2	Gap	When an Open store is archived, its window closes without a close event. Is a Close Report generated for that final window?	OI-9. Lifecycle transitions: "Open → Archived"; §Archived: "any active ordering window is closed"; Close Report: "A close event is any transition into Closed" vs Settings Epic H: "archiving (Epic C) does not generate or regenerate a report"	A) Generate a Close Report on Open → Archived. B) No report. C) Require Close before Archive (allow Closed → Archived only). Suggest C	The final season of a store archived while Open has no summary or export
Q-12	P2	Gap	Can a Draft store be archived?	OI-19. Lifecycle transitions list only "Open → Archived" and "Closed → Archived"; Note: "There is no store deletion" vs Settings Epic C: "Given a store, when the owning rep opens Schedule & Status, then an Archive Store action is available"	A) Allow Draft → Archived. B) Draft stores can't be archived or deleted. Suggest A, so abandoned drafts can be cleared from the list	Abandoned drafts pile up in the stores list for good
Q-13	P2	Conflict	Which tab and section host the Store Status card and the Danger Zone, and what are the canonical action labels and workspace tab names?	OI-2, OI-3. Lifecycle transitions: "rep clicks Pause on the Store Status card"; "Danger Zone of the Detail tab"; Epic A tabs: "(Detail, Products, Roster, Orders, Reports)"; Epic E: "See also: Store Detail Tab — Epic C" vs Launch: "the Settings tab's Store Status card (Close Store / Re-open Store)"; Settings: "Schedule & Status ... Store Status card"; Home Epic A: "Home, My Team(s), Products, Orders, Reports, Settings"; Home vocabulary: "Closed (not Paused / On Hold)"	Suggest Settings → Schedule & Status → Store Status card, with actions "Close Store" and "Re-open Store" (drop "Pause"), the six Home tab names, and cross-references to "Store Settings Epic C/D". Amend Lifecycle	The controls are placed inconsistently, deep links break, and the copy uses a banned term

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-14	P2	Gap	Which timezone applies to the auto-close date/time, does the store-level window carry a time or only a date, and what latency is acceptable?	Consolidator finding (no OI). Lifecycle Epic C: "Given a pop-up store with a configured close date/time, when that moment is reached"; metric: "100% of pop-up stores transition to Closed at their configured close date/time" vs Settings Epic E: "Opens and Closes date pickers" (store level) and "start/end/timezone per row" (per team code only)	Suggest: the store-level window stores date and time in the store's timezone (default end of day, 11:59 pm local), the scheduler runs at least every minute, and orders already in checkout at close are honored	Stores close at the wrong time for buyers in other timezones, and the 100% accuracy metric can't be measured
Q-15	P2	Gap	How does launch interact with a pop-up window? Can buyers order if the store is launched before the Opens date, and what happens if it's launched after the Closes date has passed?	OI-10. Lifecycle matrix, Ordering window, Draft: "Configurable but not running"; Epic A: "the store transitions to Open immediately and the storefront becomes publicly accessible" vs Settings Epic E: "Opens and Closes date pickers defining the order-accepting range"	A) Launch before Opens: the storefront is browsable but checkout is blocked until Opens. B) Launch opens ordering immediately and Opens is informational. Launch after Closes is blocked until the dates are fixed. Also confirm that there is no scheduled auto-open (Closed → Open) at an Opens date. Suggest A, plus the launch block and no auto-open	Buyers may order outside the intended window, or a newly launched store auto-closes straight away

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-16	P2	Gap	What is the Active Order Window ("open date → close date") for always-open stores, re-opened stores and stores paused mid-window?	OI-22. Lifecycle Close Report: "every order placed during the store's Active Order Window (open date → close date)"; "A store that is re-opened and later closed again produces a new close event with a new report scoped to the new window" vs Reports Epic D: "This season (the store's open window)"	A) Window = from the most recent transition into Open (launch or re-open) to this close. B) The scheduled Opens date if set, otherwise the launch date. Suggest A, so successive reports never double-count	Reports may double-count or miss orders, and the close-event record can't be defined
Q-17	P2	Conflict	Where can the Close Report be reached when the store is Open again after a re-open, and how is a specific report chosen when several exist?	OI-9. Lifecycle Epic D: "the Close Report for the previous close event remains viewable on demand"; Epic H: "retained after re-open" vs On-demand: "for Draft and Open stores it renders disabled with helper text ('Available when the store closes')"; Epic H: "Given a Closed store ... View Close Report link is available alongside Re-open Store" vs "sits alongside the Close Store / Re-open Store actions"; Settings Epic A: "reachable from this section once the store has closed"; Reports Epic A: the page "stacks three components" (no Close Report entry)	Suggest: the Reports-tab entry is enabled whenever at least one report exists and opens a list of close events (newest first). The Store Status card link shows in both Open and Closed once a report exists. Add the entry to the Reports Epic A layout	Retained reports become unreachable after a re-open, and the Reports tab layout is incomplete

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-18	P2	Conflict	How can summary figures "match the Reports tab for the same window" when the Reports KPI cards have no window scope, and what is the trend baseline?	OI-15. Lifecycle Epic H: "every figure in the summary layer matches the corresponding figure on the Reports tab for the same window"; summary layer: "the vs.-last-period trend delta the KPI cards already use" vs Reports Epic B: "each showing a value and a trend vs. last month"; only the Fundraising Report has a "Date-range picker"	A) Add a window-scoped query to the shared KPI aggregation (no UI change), and define the trend as this window vs the previous close window. B) Use month-over-month as on the cards. Suggest A	The reconciliation acceptance criterion is untestable, and the trend delta compares unrelated periods
Q-19	P2	Conflict	Should the Close Report still show a Team Profit chart and trend?	OI-13. Lifecycle detail layer: "Plus the Team Profit chart for the window"; Summary PDF: "the Team Profit trend" vs Reports Epic C: "Renamed from the Team Profit chart ... with that input removed, the chart reports revenue"; Settings Epic H: "it now reports team revenue and fundraising"; deps: "team profit, which no longer exists"	Suggest: replace every Team Profit reference with Team Revenue (League Revenue in league stores)	The report shows a metric with no data source
Q-20	P2	Conflict	Is Net Fundraising shown when store fundraising is disabled but already-ordered items are still collecting?	Consolidator finding (no OI). Lifecycle summary layer: "Net Fundraising (only when Team Fundraising is enabled; Avg. Order Value is promoted into this slot when it is disabled)"; edge case: "The Net Fundraising hero figure and the fundraising breakdown are omitted entirely" vs Reports deps: the report "renders in the first and third states" (enabled; disabled with items still collecting); Settings Epic A4: "Disabled · n items still collecting"	Suggest: follow the three-state read, so fundraising figures show when enabled and when disabled with exemptions, and are hidden only when nothing is collecting	Money that was collected disappears from the close summary and disagrees with the Reports tab

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-21	P2	Conflict	Which orders and status values does the Close Report detail layer use? Are pending (unsubmitted) orders included, and what is the canonical production-stage list?	Consolidator finding (no OI). Lifecycle Epic H: "every order placed during the Active Order Window is present, including cancelled and refunded"; detail layer: "Order placed → Confirmed → Artwork → Factory production → Shipped → Delivered" vs Orders Epic A: "Pending orders appear only in the Pending sub-tab"; Orders Epic D: "Submit Date → Order Confirmed → production stages → Delivery"; Reports Epic B: Orders = "total volume count of closed sales"	Suggest: include pending orders flagged "Pending"; one status enum (Pending → Submitted → Confirmed → Artwork → In production → Shipped → Delivered, plus Cancelled and Refunded) shared with Orders; Orders KPI = submitted, non-cancelled orders	Order counts won't reconcile between the report, the Orders tab and the Reports tab, and the status filters disagree
Q-22	P2	Ambiguous	Is the "manual, asynchronous verification" paragraph (EIN, banking, admin review queue, 24–48 hr wait) part of this feature?	OI-20. Lifecycle deps: "Verification is a manual, asynchronous process — not an automated check. Requires: secure database storage for application submissions (business-entity fields incl. EIN and banking ...) ... Approval introduces a 24–48 hr waiting period"; no other spec mentions verification	A) It was pasted from another spec by mistake, so remove it. B) It is in scope and gates launch, so specify it. Suggest A	The team may estimate or build a verification and banking-data system nobody asked for, with security and compliance overhead
Q-23	P3	Conflict	Can a launch be reversed? Launch calls it "reversible" and tracks "reversals", but Lifecycle says one-way	Consolidator finding (no OI). Lifecycle §Draft: "Once launched it transitions to Open and cannot return to Draft"; Epic A: "there is no 'revert to draft' action anywhere in the UI" vs Launch §Problem: "Reps need an explicit, reversible action to take a store live and to pause it"; Launch metrics: "Accidental-launch reversals near zero"	Suggest: launch is one-way, "reversible" refers to Close/Re-open, and the metric is reworded to "accidental launches closed within 1 hour"	The team may build a revert-to-draft path or a metric with no data source

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-24	P3	Conflict	What does a buyer see on a Closed store: the Draft "inaccessible" behavior or a closed landing page, and what is the exact copy?	OI-18. Lifecycle matrix: Draft "storefront URL is inaccessible to buyers"; Closed "'This store is closed' landing page"; Epic F: "'This store is currently closed' screen" vs Launch: "Closed suspends ordering (technically equivalent to a draft)"; Settings Epic C/D: "'This store is closed' landing page"	Suggest: Closed and Archived show the same landing page, headed "This store is currently closed". Remove "technically equivalent to a draft" from Launch. Draft returns not-found	Storefront routing and copy for Closed are unclear
Q-25	P3	Conflict	What is the Overview KPI called, and which term replaces "Active"?	OI-4. Lifecycle matrix: "Overview KPI — Open Stores count" vs Epic G: "the Active Stores KPI card on the Overview"; Home vocabulary: "Open (not Active)"; Roster Epic 7: "whether a move is permitted once the store is Active or Closed"	Suggest: one KPI labelled "Open Stores" counting Open only; replace "Active" in Lifecycle Epic G and Roster Epic 7	Wrong KPI label, which breaks the shared vocabulary rule
Q-26	P3	Conflict	Which confirmation and feedback pattern applies to Launch, Close and Re-open: modal, toast, or both?	OI-7. Lifecycle Epic A: "clicks Launch Store, then the store transitions to Open immediately"; Epic B: "when the confirmation appears"; Epic D: "requires no confirmation modal" vs Launch: "a 'Launch Team Store' modal confirms the consequences" and a "'Your store is now live!' success modal"; "Status changes confirm with toasts"	Suggest: Launch = confirmation modal + success modal (per Launch); Close = confirmation modal + success toast; Re-open = no modal, success toast. Amend Lifecycle Epic A	UX is inconsistent across specs, and the acceptance tests contradict each other
Q-27	P3	Gap	Are any emails or notifications sent on launch, close, auto-close, re-open or archive, and to whom (players, team managers, rep)?	OI-7, OI-17. Lifecycle deps: trigger source "consistent with System Emails"; Close Report note: "no changes to ... notifications" vs Launch: "all players and the team manager receive an email that the store was created"; Settings Epic H: "whether the manager version is emailed on close" (open)	Suggest: launch email per Launch; on auto-close, email the rep; no buyer emails on close, re-open or archive in v1	Notification scope and templates are undefined

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-28	P3	Gap	After a manual Close, when does the Close Report modal appear for the rep who closed the store and is still in the workspace?	Consolidator finding (no OI). Lifecycle: "shown on first workspace entry after close"; Epic H: "when that user next opens the workspace"; Settings Epic H: "auto-presented on the rep's first return to the workspace after the close"	A) Immediately after the close confirmation. B) Only on the next workspace entry. Suggest A, which matches "becomes the opening step of the store-closing flow"	The trigger logic and seen-state timing are inconsistent
Q-29	P3	Ambiguous	Is the auto-close banner or status indicator built at all, given the Close Report modal "replaces the banner", and when can Home C-17 ever show?	OI-17. Lifecycle Epic C: "a banner or status indicator informs them ... the report modal replaces the banner as the entry point on first entry after close"; "Any dismissal marks the report as seen" vs Home C-17 trigger: "this user has not seen the report for this close event"	A) No banner; the modal is the notification, and the persistent Closed status chip is the indicator. Drop C-17 or keep it only as a fallback when the modal fails. Suggest A	A redundant banner and a dead Home condition get built and tested
Q-30	P3	Conflict	Can roster moves and edits be made while the store is Closed?	Consolidator finding (no OI). Lifecycle Epic B: "when the rep opens any workspace tab (Products, Roster, Orders, Detail), then all content remains fully editable" vs Roster Epic 7: "To confirm before build: whether a move is permitted once the store is Active or Closed"	Suggest yes: Closed is fully editable, so Roster Epic 7 should close its open item and follow Lifecycle	The roster move feature stays blocked on a question Lifecycle already answers
Q-31	P3	Ambiguous	How many hero figures does the summary layer show: the four listed, or "three to five"?	OI-16. Lifecycle principles: "Cover → three to five hero figures → a full recap card"; summary layer lists "Total Revenue · Orders · Net Fundraising ... · one derived superlative — top product by quantity ordered"	Suggest: exactly four hero figures (three in the zero-order case, where the superlative is suppressed)	The card sequence length and progress indicator can't be built

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-32	P3	Gap	Where does the "open PO / unsettled payment" status come from?	Consolidator finding (no OI). Lifecycle edge case: "Closed with unsettled payment (open PO) ... summarized in a needs-attention strip" vs Orders Epic B: payment is entered only "as a PO Number"; Home C-20: clears when "PO settles"	A) Add a PO payment status (Open/Settled) fed by the finance or ERP system. B) Drop the needs-attention strip from v1. Suggest B unless finance data exists	The strip and Home C-20 have no data source
Q-33	P3	Gap	How exactly are export files named: date format, a store closed twice on the same day, and special characters in store names?	Consolidator finding (no OI). Lifecycle Exports: "StoreCloseReport_[StoreName]*[CloseDate].pdf and StoreCloseReport*[StoreName]_[CloseDate].csv"	Suggest: CloseDate = YYYY-MM-DD in store timezone; add "_2", "_3" for later closes on the same day; replace characters outside letters, digits, hyphen and underscore with "-"	File names collide or break on some operating systems
Q-34	P3	Ambiguous	Should the Close Report CSV respect the current column-visibility selection or always contain every column?	Consolidator finding (no OI). Lifecycle Exports: CSV "respecting the current column-visibility selection" vs edge case: "exports still contain the complete data set"; Epic H: "a full order-level CSV"	Suggest: all rows always, columns per the visibility selection (matches All Orders CSV Export), with a "Reset columns" hint	Rep expectations of a "full" export may not be met
