Clarification Questions — Tabbed Store Dashboard

Sources: TS-Tabbed Store Dashboard-191026-075922.pdf (primary); cross-checked against TS-Customize New Product, TS-Launch & Status Controls, TS-Order Management (Orders Tab), TS-Roster Management (My Team(s) Tab), TS-Store Analytics (Reports Tab), TS-Store Home (Home Tab), TS-Store Settings (Settings Tab), TS-Store Status & Lifecycle · Total: 18 (P1 2 · P2 9 · P3 7)

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	Does the workspace shell render five tabs or six (with Home)? In what order? And which tab is the default on entry, including where Done on the guide's last card lands?	OI-1. Dashboard p.2–3 Epic A: "the store tabs are available: Products, Orders, My Team(s), Reports, and Settings" and "The tab count is fixed at five" vs Store Home Epic A: "it presents six tabs in order: Home, My Team(s), Products, Orders, Reports, Settings" / "Tab count is no longer fixed at five. The Tabbed Store Dashboard shell must be amended — see Appendix A" / "Home is the default landing tab on workspace entry"	A) Six tabs in Home's order, Home is the default, and Dashboard Epic A plus card 2 get amended (recommended, since Home is the more specific and later-intent spec). B) Five tabs, and Home is deferred. C) Six tabs with a different order. Also confirm whether card 2 ("The tabs") gains a Home line, and supply Store Home Appendix A, which is referenced but not included.	The shell can't be built. Navigation order, the default route, card 2 copy and the Done landing are all undetermined.
Q-2	P1	Conflict	Is the launch gate "at least one product added" or "at least one visible product"?	OI-2. Dashboard p.3 Not a checklist: "the launch gate requires at least one visible product (Products Tab spec)"; card 6: "a store needs at least one visible product to launch" vs Launch & Status Controls: "LAUNCH STORE is disabled … 'Add at least one product to launch your store.' … the gate is products added, not published" and Store Status & Lifecycle: "cannot be launched until at least one product has been added" vs Store Home C-09: "Catalog holds zero visible products … store cannot launch"	A) Visible product (≥1 with visibility on). Update Launch Controls and Lifecycle (aligns with Dashboard and Home). B) Added product (≥1 in catalog), and rewrite card 6 and the Dashboard note.	The guide "must not … contradict" the gate. Either card 6 copy or the gate logic will be wrong, and launch-gate tests can't be written.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P2	Gap	Which spec owns the workspace header, and what exactly does the shell contain in each store state (including Create Template placement and, for Archived stores, a read-only indicator and how the rep reaches the workspace at all)?	OI-3, OI-7, OI-8, OI-15. Dashboard p.1 Solution: "plus the ability to view the live storefront, switch stores, and open the Customizer"; Trigger: "A persistent entry point in the workspace header reopens the guide" vs Launch & Status Controls: "the LAUNCH STORE button is replaced by a Preview Store button … and a store menu whose single option, Create Template" vs Store Home Epic A: "The store status chip, the storefront URL, the Preview Store control, and the Setup Guide re-entry point remain in the header" vs Lifecycle Epic D: "status badge updates to Open in the store list, workspace header"; Lifecycle Epic E: Archived "no field or action is editable"; Launch & Status Controls: archived stores "appear only in the Archived Stores section of the Account page"	A) The Dashboard (shell) owns the header layout, with one element list per state (Draft / Open / Closed / Archived) (recommended). B) Each feature spec owns its own control and the shell only provides slots. Please give the element list and order for each state, including whether Archived shows a read-only banner and opens only from Account → Archived Stores.	Header layout, responsive behaviour and slot ownership would be guessed, and controls may collide or duplicate.
Q-4	P2	Conflict	What is the storefront link called, and what does it do on a store that isn't Open?	OI-3. Dashboard p.2 Epic A: "Given I choose View live storefront, when it opens, then I see the consumer view of this store" vs Launch & Status Controls: "a Preview Store button that opens the live storefront (same behavior as the former View Store link)" (shown only after launch) and success modal "View Store or Stay In Editor" vs Lifecycle: Draft storefront "inaccessible to buyers"; Closed "'This store is closed' landing page"	A) The label is "Preview Store", it appears only after launch, and on Closed/Archived it shows the closed screen. B) It's available in every state and Draft shows a rep-only preview. C) It's hidden in Draft and Archived.	The label conflicts with the bound naming rules, and behaviour on Draft/Closed/Archived stores is undefined.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P2	Gap	How does "switch stores" work: where is the control, which stores does it list, and what happens on switch?	OI-8. Dashboard p.1 Solution: "switch stores"; p.2 Scenarios: "switching to another store without leaving the workspace". No epic or acceptance criterion defines it. Lifecycle Epic G: "Archived stores do not appear in the list"	A) Header dropdown listing Draft/Open/Closed stores the rep can access, excluding Archived, and it reloads the workspace on the default tab. B) It links back to the Stores directory. Also confirm whether the guide's first-entry trigger evaluates on switch.	A scenario named in the spec has no behaviour, permissions or list scope.
Q-6	P2	Gap	When the rep opens "the Customizer" from the workspace shell, which brand customizer opens, and how do multi-brand and zero-brand reps resolve it?	OI-9. Dashboard p.1 Solution: "plus the ability to … open the Customizer" vs Customize New Product A2/A3: "Where QX7 returns two or more brands, the rep must resolve the pill before Customize New Product will open a customizer"; A7 zero-entitlement state; A5 server-side enforcement	A) There's no separate shell control. "Open the Customizer" means Products → Add Products → Customize New Product (remove it from the shell). B) A shell control that reuses the SOURCE-pill brand resolution and A5 enforcement.	Risk of a second Customizer entry point that bypasses brand entitlement (the licensing exposure Customize New Product exists to prevent).
Q-7	P2	Conflict	Which tab and section hosts the Close / Re-open / Archive controls (the Store Status card)? Are the Lifecycle spec's tab names "Detail" and "Roster" (and the "Pause" label) stale?	OI-4. Dashboard card 6: "Where the controls live"; Epic A tabs: "Products, Orders, My Team(s), Reports, and Settings" vs Lifecycle Epic A: "all tabs (Detail, Products, Roster, Orders, Reports)"; Epic B: "Store Status card on the Detail tab"; transitions: "Danger Zone of the Detail tab" vs Settings Epic A: "Schedule & Status … Store Status card → Close / Re-open Store … Danger Zone → Archive Store"	A) Settings → Schedule & Status → Store Status card. Lifecycle tab names are stale and get updated (recommended). B) Lifecycle is correct (a separate Detail tab).	Card 6 could teach the wrong location. Deep links and the Close Report secondary entry point could target a tab that doesn't exist.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-8	P2	Gap	Can the referenced but missing specs be provided before build: System Modals & Toasts (the paced-card shell, progress bar, Skip, motion) and Product Catalog Management (Products Tab: visibility, Team Required/Supplied, bundles, Add Products labels)? Can Store Home Appendix A (the required shell amendments) also be provided?	OI-6. Dashboard p.3 Presentation: "using the shared shell specified in System Modals & Toasts … This page owns the card content; it does not redefine the shell"; Not a checklist: " (Products Tab spec)"; Acceptance: "matches the labels currently used on the Add Products page"; Store Home Epic A: "The Tabbed Store Dashboard shell must be amended — see Appendix A" (appendix not in the PDF)	A) Provide both specs now. B) Confirm that the Store Close Report section of Store Status & Lifecycle is the interim reference for shell behaviour.	Shell behaviour (controls, progress bar, Skip, dismissal) and card 3–5 accuracy can't be implemented or verified.
Q-9	P2	Ambiguous	Is a "Catalog Template" (card 5) the same thing that "Create Template" produces? Where does Create Template live?	OI-7, OI-18. Dashboard card 5: "a Catalog Template, a saved set of this store's own gear that can be reused in a later store" vs Settings Epic D: "Create Template — saving this store's products, pricing, and settings as a reusable blueprint" (on the Store Status card) vs Launch & Status Controls: "a store menu whose single option, Create Template, spins a reusable store template off this store" (in the header)	A) Same object. Card 5 copy should say "products and settings", and Create Template lives in one place (say which). B) Different objects. Name the store-level blueprint differently so card 5 doesn't teach a conflated term.	Card 5's whole purpose is disambiguation. Teaching the wrong definition creates the very support contacts it is meant to prevent. Header-menu contents also depend on it.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-10	P2	Gap	What are the cover card's chip label and copy for every lifecycle state, and what does it show when the store has no logo?	OI-11. Dashboard card 1: "A Draft status chip reading Not live yet. One line stating that the store has been created but buyers cannot see it"; Draft state: "a guide reopened from the header on a launched store shows Open, not Draft"; Acceptance: "status chip reflects the store's current lifecycle state" vs Lifecycle: four states Draft/Open/Closed/Archived, badge colours "Draft (blue), Open (green), Closed (amber)" vs Store Home: "Home must not render 'Active' … The workspace header's chip should be corrected on the same pass"	Provide the chip text and status line for Open / Closed / Archived (e.g. Open: "Live: buyers can order"; Closed: "Closed: buyers can't order"; Archived: "Archived"). Reuse the lifecycle badge component and colours. If there's no logo, show the store-initial placeholder.	Reopening the guide on a launched store would show "buyers cannot see it", which is false. Chip wording and colour drift between the cover card and the header.
Q-11	P2	Gap	Which users does the guide auto-present to: only the creating rep, or also other reps, non-owner reps and team-manager-role users who enter the workspace? And does "first store of the other type" re-arm when a rep opens (not creates) one? Which tabs does each role see in the shell?	OI-5, OI-10. Dashboard Trigger: "given a rep enters a store workspace for the first time after creating that store"; "Given they create their first store of the other type … then the guide auto-presents once more" vs Lifecycle Epic E: "a rep who is not the owner opens the Detail tab"; Close Report: "A rep and an invited team-manager-role user each see the auto-trigger" vs Roster: "store managers (reps, team managers, league directors)" vs Settings Epic C: Danger Zone "hidden for manager-role users" and Store Home: the Team Manager Portal "does not render the six-tab navigation at all"	A) Creator only, as written. Others reach it via the header. B) Any rep-role user on their first entry to a store of a type they haven't been oriented on, whether or not they created it (recommended). C) Also team-manager-role users.	Wrong trigger audience. A rep first exposed to league stores via someone else's store never gets the divisions/teams card. The flag's key design depends on the answer.
Q-12	P3	Gap	Should the looping clips respect the OS "reduce motion" setting, and what alt-text/caption approach applies to card media?	OI-13. Dashboard Card media: "Clips loop silently, carry no playback controls, and are decorative-with-caption"; Out of scope: "any in-product motion toggle" vs Lifecycle Close Report: "no looping animation on a figure card … there is no in-product reduce-motion control"	A) Honour prefers-reduced-motion by showing the still image instead of the clip, and treat media as decorative (empty alt) with a visible caption (recommended). B) Always loop.	Accessibility compliance risk. Inconsistency with the shell's motion rules.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-13	P3	Ambiguous	Should card 3 also mention the other reasons a visible product may not appear (art clearance, renders still processing, incomplete bundle)?	OI-17. Dashboard card 3: "Added → configured → visibility on → store launched"; Metrics: "why isn't my product showing on the storefront — the single question the guide most needs to answer" vs Settings Epic G: "the default policy that blocks publishing until art is cleared" vs Store Home: "decorated product never became visible because its renders were still processing"; "a bundle dropped off the storefront"	A) Keep the four steps only (the guide is orientation-level). B) Add one line saying that some products need art or render clearance first.	Card 3 may not answer its target question for decorated, third-party or bundle products.
Q-14	P3	Ambiguous	What does "names the league tab structure" mean for league card 2? Which labels are canonical for the team tab and the store type, and which bound-terms list governs card copy?	OI-12. Dashboard League card set: "card 2 names the league tab structure"; Naming: copy "bound to the current labels" vs Roster: "My Team tab drops straight into that team's roster" (single team) / "when the My Teams tab opens" (league) / "Single-Team Locker" vs Settings: "Store Type (Individual Team Store / League Store)"; Dashboard Naming list "As of August 31, 2026" vs Store Home "Bound terms as of September 3, 2026: … My Team(s), Roster Bank, Pending Orders, Submit … Open (not Active), Closed (not Paused / On Hold) … Point of Contact"	A) The tab label is always "My Team(s)", and league card 2 describes it as divisions → teams → rosters. B) The tab label varies by store type ("My Team" vs "My Teams"). Also confirm "Individual Team Store" as the canonical store-type label, and adopt the Sep 3 Store Home bound-terms list as the superset for card copy (recommended).	League card 2 copy can't be written, and the naming acceptance criterion can't be tested.
Q-15	P3	Gap	What happens if the auto-presented guide is never dismissed (browser closed, navigation away, store switched)? And are existing reps with prior stores treated as already oriented at rollout?	OI-5. Dashboard Acceptance: "Given the rep dismisses the guide by any path — Done, Skip, X, Escape, backdrop — then it is marked seen"; Trigger: "for the first time after creating that store"; Dependencies: "per-rep, per-store-type dismissal flag persisted at account scope"	A) Seen only on explicit dismissal, so it re-presents on the next entry to that store until dismissed. B) Seen as soon as it is shown. For rollout: A) backfill the flag as seen for reps with existing stores of that type. B) Everyone sees it once.	Ambiguous flag write timing and migration. Experienced reps may get unwanted orientation, or new reps may miss it.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-16	P3	Ambiguous	When a card links out to a tab, does following the link close the guide and mark it seen? Which card links to which tab? And who authors and delivers the final card copy and still images?	OI-14. Dashboard Tone: "each card links out to the relevant tab rather than reproducing its spec"; Acceptance: dismissal paths are "Done, Skip, X, Escape, backdrop" (link-out not listed); Card media: "Each card ships with a still image at launch"	A) A link closes the guide, counts as a dismissal (marks it seen), and opens the tab. Card-to-tab map: 2→none, 3→Products, 4→Products, 5→Products (Add Products), 6→Settings → Schedule & Status, league divisions card→My Team(s) (recommended). B) A link opens the tab behind the guide, which stays open. Name the owner for copy and image delivery.	Seen-state could be wrong after link-out. Link targets and launch-ready assets are undefined.
Q-17	P3	Ambiguous	What are the guide's navigation controls: is there a Back/Previous, which arrow keys do what, does a click anywhere advance, and what does "Skip" do (where does it sit, on which cards)?	OI-5. Dashboard Acceptance: "when the rep presses Next, clicks, taps, or uses the arrow keys, then the sequence advances one card"; "any path — Done, Skip, X, Escape, backdrop" vs Lifecycle Close Report: "Skip to full report control … moves the user directly to the detail layer"	A) Right arrow / Next advances, Left arrow / Back goes back, a click on media does not advance, and Skip closes the guide and marks it seen (recommended). B) Skip jumps to the last card.	Inconsistent keyboard behaviour. Skip semantics differ from the shared shell's Close Report Skip.
Q-18	P3	Ambiguous	Are anonymous analytics events (card viewed, exit card index, completed vs skipped) allowed, given that "completion tracking" is out of scope? What events and properties are instrumented?	OI-16. Dashboard Metrics: "share of sequences completed to the final card vs. skipped or dismissed early, and the card index at which reps exit" vs Out of scope: "Completion tracking, per-store progress records"; Dependencies: "No completion state"	A) Yes. Analytics events only, never read back by the product (recommended), e.g. guide_opened{trigger: auto/header/home}, card_viewed{index}, guide_dismissed{path, index}. B) No events, so drop those metrics.	Success metrics can't be measured, or the analytics implementation may be challenged as completion tracking.
