Clarification Questions — Team Stores Landing Page

Sources: input/requirements/Team-Store-Confluence/Global Navigation/Team Stores Landing Page.md (Confluence, last modified 2026-10-13, pulled 2026-10-26), cross-checked against the other 54 .md files in input/requirements/Team-Store-Confluence/ (mainly Account Page, Workspace, Access - Authentication, Team Stores Platform Overview, Store Settings, Customize New Product, Products Tab, System Emails, System Modals & Toasts) · Total: 43 (P1 4 · P2 25 · P3 14)

How to read this. A few terms come up again and again: - **Customizer**: a brand's own online design tool, where a rep may already have an account (one per brand). - **qx7**: Prolook's internal database that records which dealership a rep belongs to (matched by email) and which brands that dealership may sell. - **Native account**: a Team Stores account that the rep creates directly with an email and password, without a Customizer. - **Primary brand**: the one brand Team Stores treats as the rep's main brand, for example the brand the "Customizer" shortcut in the account menu opens. - **Brand connection**: Team Stores' record that a rep's Customizer account for a brand is linked to them, so they can add that brand's products. - **Access gate**: the check that keeps a rep out of the Team Stores tools until Prolook approves their business. - **Splash page**: the first page a signed-out visitor sees. - **OI-n**: an open item raised in implementation-summary.md. Each one is answered by the question that lists it.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	When a signed-out rep picks a brand on the splash page, the page asks them to type that brand's Customizer password into Team Stores. The open questions ask whether Team Stores should avoid collecting Customizer passwords at all. Which approach should we build?	OI-13. Landing Page (Epic B — Selection sets primary): "that Customizer becomes their **primary brand by default** and they are prompted to **enter their password** for that account." vs Landing Page (Open Questions): "**Brand connection mechanism:** can brand Customizers support an authorization hand-off so Team Stores doesn't collect Customizer passwords directly?"	A) Team Stores shows its own password box and checks the password with the brand's Customizer. B) Team Stores sends the rep to the brand's own Customizer sign-in page, and the rep comes back already signed in, like "Sign in with Google". Team Stores never sees the password. C) Use B where a Customizer supports it and A elsewhere. Suggested: B, because it is safer and keeps Customizer passwords out of Team Stores.	This choice decides how sign-in, "Sign in with a different email" and brand connections are built. Building A and later switching to B means redoing the sign-in screens and the security review.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-2	P1	Conflict	Does a rep whose dealership is already in qx7 still have to apply and wait for Prolook's approval before using Team Stores? The Landing Page only blocks reps with no dealership. The Access page blocks every new rep, however they sign in.	Landing Page (Epic C — New-org prompt): "Given a rep signs up and is **not associated with a dealership**, when they enter Team Stores, then they are prompted to **register their organization (business)**" vs Access - Authentication (Epic A): "Given I lack access, when I authenticate to Team Stores by **either** Customizer sign-in or a native Team Stores account, then I am shown the gate with a path to submit the application form." and (Scenarios): "A first-time operator attempts to enter Team Stores and is asked to submit the business-entity form"	A) Only reps with no dealership in qx7 apply. Reps whose dealership is in qx7 go straight in. B) Every new rep applies, even if their dealership is in qx7. C) Only the first rep from each dealership applies, and later reps from that dealership get in automatically. Suggested: A or C, to be confirmed by the business.	This decides whether most Customizer reps hit a 24–48 hour wait on their first visit. It changes the first-visit flow, the review workload at Prolook, and the welcome experience.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Conflict	Is the Stripe business registration form the same thing as the business application with EIN (US tax ID) and banking details, or are there two different forms? If there are two, who gets which one?	OI-4. Landing Page (Epic C — Stripe-generated registration form): "the business registration form is **generated by Stripe**." vs Access - Authentication (Epic A): "it collects business-entity information including EIN, banking details, and related business identity fields" and Access - Authentication (Open Questions): "does the Stripe-generated business registration replace the EIN/banking application form described in Epic A, or do both exist for different reps?" Prototype: shows its own in-app "Register Your Organization" form (legal name, entity type, address, EIN, bank routing and account) and only says details are "collected securely through Stripe".	A) One form: the Stripe form replaces the EIN/banking form for everyone. B) Two forms: Stripe for native sign-ups with no dealership, and the EIN/banking form for everyone else who is blocked by the gate. C) Stripe collects payout/banking details, and a short Team Stores form collects the rest. Suggested: A, because one form and one review queue is simpler.	We can't build the registration step, the Stripe connection or the review queue for Prolook staff until this is decided.
Q-4	P1	Gap	When someone who already has a Team Stores account signs in or signs up another way, should the two be linked automatically when the email matches, or should the rep always confirm first? There is also no screen yet for the linking step.	OI-3. Landing Page (Epic E — No duplicate accounts): "The exact linking rule (automatic on a verified matching email vs. explicit confirmation) is an open question." Landing Page (Epic D — Existing email): "the rep is routed to account linking (Epic E)." Landing Page (Epic E — Link existing account): "the rep can link the two from the Account page by authenticating with both." Prototype: shows "An account already exists… Sign in and we'll link your accounts automatically" and has no linking screen.	A) Link automatically when the email matches and has been confirmed. B) Always ask the rep to confirm by signing in with the existing account first. C) Link automatically when the email matches, and require proof (sign-in with both) when the emails differ. Suggested: C. Please also confirm who designs the linking screen(s).	Without this rule, the system could create two accounts for one person (the spec aims for "Zero duplicate Team Stores user records") or link the wrong people. Stores, orders and approval status all hang off this one account record.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P2	Conflict	Where are native Team Stores accounts and passwords kept: in a new Team Stores database, or in the shared company service that already holds rep accounts? The Platform Overview says Team Stores does not keep its own separate user database.	OI-25. Landing Page (Dependencies & Technical Constraints): "The native path needs a **Team Stores identity service** (sign-up, email verification, sign-in, password reset and change)" vs Team Stores Platform Overview (Ecosystem Architecture — Hierarchical Permissions): "allowing the Team Store to automatically recognize a user's permissions and organizational structure without requiring a separate, redundant database." and "the **service layers act as the crucial bridge**, supplying the standalone Team Store platform with the necessary products, user account details, and design assets"	A) A new Team Stores-only service holds native accounts and the single user record. B) Native accounts are added to the shared company account service, so other Prolook products can use them too. C) The shared service holds the user record and Team Stores holds only native passwords. Suggested: decide with the platform team, and update the Platform Overview either way.	This decides which team builds the sign-in system and where the one-person-one-account record lives. Picking wrong means moving data later.
Q-6	P2	Gap	How do invited team managers (coaches) sign in? The Landing Page only covers sales reps. Do coaches use the same splash page, password rules, lockout and password reset? Do they skip the business approval gate?	OI-6. Landing Page (User persona & use cases): "**Who is this for?** PROLOOK sales reps" vs Team Stores Platform Overview (Team Manager Access): "An invited team manager signs into the workspace and sees a **slimmed-down view scoped to their own store only**" and Store Settings (Epic A2b — People & Access): "the invitee receives an email link to set a Team Manager Portal password."	A) Coaches get a native Team Stores account through the invite link. They sign in on the same splash page, follow the same password rules, and skip the business gate and brand steps. B) Coaches have a separate sign-in page and account type. Suggested: A, with the welcome modal, business gate and brand selection turned off for coaches.	Without an answer, the sign-in system may be built for reps only, and coaches could hit the business gate or the brand-selection screens by mistake.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-7	P2	Ambiguous	What does "automatically signed into those brand Customizers" actually mean? Does Team Stores really sign the rep into each brand's Customizer website, or does it just record in Team Stores that those brands are available to the rep?	Landing Page (Epic A — Auto multi-brand sign-in): "then they are **automatically signed into those brand Customizers** and can add products from them." Landing Page (Epic E — Customizer-path connections): "the brands they're auto-signed into (Epic A) are recorded as brand connections on their user record"	A) Team Stores only records the brands as connected. The rep signs into each Customizer site separately when they open it. B) Team Stores also starts a live signed-in session on each brand's Customizer site. Suggested: A, unless every Customizer supports shared sign-in.	Option B needs shared sign-in across every brand site, which is a much bigger technical job. It also affects whether the "Customizer" menu item opens a signed-in page.
Q-8	P2	Conflict	Which screens may set or change the rep's primary brand? The Landing Page lets the welcome modal and the splash-page brand choice set it. The Account Page says only the Account Page may change it.	OI-1. Landing Page (Epic A2 — Confirm & Enter): "the chosen brand is set as the session's primary" and (Epic B — Selection sets primary): "that Customizer becomes their **primary brand by default**" vs Account Page (Epic B — Primary brand is set here): "This page owns that write path; no other surface changes the primary brand."	A) The welcome modal (first visit) and the Account Page can set it. Signing in from the splash page does not change a primary brand that is already saved. B) It is set again on every sign-in from whichever Customizer the rep chose, and the Account Page can change it in between. C) Only the Account Page sets it after the first visit. Suggested: A, and reword the Account Page to say "after the first visit".	Developers won't know whether a rep's chosen primary brand should survive their next sign-in. The rep may see the "Customizer" menu shortcut jump between brands.
Q-9	P2	Ambiguous	Is the primary brand only for the current visit (lost when the rep signs out), or is it saved on the rep's account? The spec calls it a "session" setting in some places and shared across sign-in methods in others.	OI-1. Landing Page (Epic A2 — Auto sign-in recognition): "set as their **primary brand for this workspace session**" vs Landing Page (Epic E — One user record): "Stores, orders, Access / Authentication gate status, primary brand and brand connections are shared across both sign-in methods." and Account Page (Epic B): "the rep can change which entitled brand is their **primary** for the workspace session"	A) Saved on the account, and kept until the rep changes it. B) Only for the current visit, and chosen again at each sign-in. Suggested: A, and replace the word "session" in the specs.	This decides whether the primary brand is saved to the database or only kept for the current visit. It also decides what the "Customizer" menu item opens after a rep signs in again.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-10	P2	Gap	For a rep who signed up natively and has several brands, which brand is picked as primary to start with?	OI-2. Landing Page (Epic A2 — Primary Brand Selection): "on the native path the default is an open question (see Open Questions)." Landing Page (Open Questions): "**Native primary brand default:** first connected brand, or a required choice?" Workspace (Dependencies & Technical Constraints): the Account Page "should state … how connecting one sets primary brand for the session state this menu reads."	A) The first brand the rep connects becomes primary automatically. B) The rep must choose one before entering (no default). C) The brand that appears first in qx7 becomes primary. Suggested: A, which also covers a rep who connects their first brand later on the Account Page.	We can't build the welcome modal's preselected card, or what happens when the rep closes it with "×", for native reps.
Q-11	P2	Gap	A native rep with no connected brands sees the welcome modal, but "Confirm & Enter" needs a primary brand to be selected. How does this rep get past the modal?	OI-16. Landing Page (Epic A2 — Native-path variant): "If the rep has no connected brands yet, no primary brand is set until one is connected." vs Landing Page (Epic A2 — Confirm & Enter): "Given a primary brand is selected, when the rep clicks **Confirm & Enter**, then the modal closes"	A) "Confirm & Enter" is always enabled. With no brand, it just enters the workspace. B) Show a "Skip for now" button. C) Only "×" closes the modal. Suggested: A, with the button reading "Enter" when no brand is selected.	A new native rep could get stuck on their very first screen.
Q-12	P2	Ambiguous	Can a brand the rep is entitled to but hasn't connected yet (their Customizer account uses a different email) be chosen as primary? If it can, what should the account menu's "Customizer" shortcut open for it?	OI-18. Landing Page (Epic A2 — Primary Brand Selection): "Brands with no Customizer account, or with an access request pending, cannot be selected as primary." vs Account Page (Epic B): card state "**Sign in:** the rep has an account under a different email and hasn't connected it yet." and Account Page (Epic B — OPEN): "what the menu item does when the primary brand is one the rep has **not** connected (email mismatch, never manually logged in)"	A) Only connected brands can be primary. B) Any brand with a Customizer account can be primary, and the shortcut opens that brand's Customizer sign-in page. Suggested: A, which also resolves the Account Page's OPEN item.	This affects which cards can be selected in the welcome modal and on the Account Page, and whether the menu shortcut can lead to a sign-in wall.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-13	P2	Gap	On a rep's first visit, in what order do the screens appear? For example: email check, business registration or approval gate, brand connection, welcome modal, then Overview. Does the welcome modal appear before or after a rep is approved?	Landing Page (Epic A2 — First-visit trigger): "Given a rep reaches the Team Stores landing for the **first time** by either path, then a **Welcome to Team Stores** modal is shown." Landing Page (Epic B — Successful auth → Overview): "subject to the Access / Authentication gate." Landing Page (Epic C — No access until approved): "This is a hard block, not a prompt the rep can skip." Access - Authentication (Epic B): "on next entry, lands on the Overview with a confirmation."	A) Sign in, then email check, then registration or gate (waiting if needed), then welcome modal on the first visit after approval, then Overview. B) The welcome modal comes first, then the gate. Suggested: A, so the welcome modal only shows to reps who can actually use the workspace. Please also confirm whether the approval confirmation and the welcome modal can appear together.	Two first-visit messages could pile up, or the welcome modal could be "used up" while the rep is still blocked.
Q-14	P2	Gap	What exactly is on the splash page? Please describe the layout, wording, images and the "top-level marketing nav". Is the content-management system for the hero image needed now, or is a fixed image fine for launch?	OI-21. Landing Page (Executive Summary): "the platform must read as a premium brand surface, not an internal admin panel." Landing Page (Dependencies & Technical Constraints): "Also needs a CMS-or-asset service for the splash/brand hero imagery and top-level marketing nav (currently a single static hero)."	A) Fixed hero image and wording for launch, with the two sign-in buttons. The CMS comes later. B) A CMS is needed at launch. Suggested: A, with a design mock-up to be supplied.	The splash page can't be built beyond its buttons, and the content system may be built too early or forgotten.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-15	P2	Conflict	On the splash page, typing any email shows whether it is in qx7 and which brands it can sell. Elsewhere the spec is careful never to reveal whether an email has an account. Is it acceptable for the splash page to reveal this?	Landing Page (Epic B — Email found → Choose a Customizer): "Given the email **is found in qx7**, then a **"Choose a Customizer"** modal is shown listing the **brand Customizers the rep is entitled to**" and (Email not found): "the rep is offered the option to **sign up for a Team Stores account**" vs Landing Page (Epic D — Failed sign-in message): "without revealing whether the email has an account." and (Password reset request): "the same confirmation message is shown whether or not the email has an account"	A) Acceptable. Brand lists are not sensitive. B) Show the brand list only after the rep proves they own the email (for example with a one-time code sent to that email). C) Show the same next screen for every email, and reveal the brands only after sign-in. Suggested: B or C.	Anyone could find out which emails belong to Prolook reps and which brands each dealership sells. Fixing this later changes the splash flow.
Q-16	P2	Ambiguous	How can the system tell that a rep has a Customizer account under a different email? The Account Page shows a separate "Sign in" card for this case, but the lookup can only check the rep's own email, which looks exactly like "no account".	Account Page (Epic B — Customizer account validation): "**Sign in:** the rep has an account under a different email and hasn't connected it yet." and "**Request access:** no account was found for the rep's email." vs Landing Page (Epic B — No account found): "its card shows the message "You don't have an account for this Customizer yet" with two options: **Request access to this brand**, or **Sign in with a different email**" Landing Page (Epic A — Email-mismatch use case): "the platform **cannot auto-recognize** that access"	A) There is no separate "Sign in" state. Both cases show the "no account" card with both options. B) qx7 or the Customizers can list other emails tied to the rep, so the "Sign in" state can be shown. Suggested: A, unless B is confirmed technically possible.	The Account Page would promise a card state the system can't detect. The splash page and the Account Page would then show different cards for the same brand.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-17	P2	Gap	A visitor on the splash page can press "Request access" before signing in, just by typing an email. Should Prolook accept access requests from someone who hasn't proved they own that email?	Landing Page (Epic B — Request access): "Given the rep selects Request access to this brand, then the request is sent to Prolook and the card shows **Access pending**." This happens in the splash flow, after "Given the rep submits an email, when they click **Continue**", with no sign-in step before it.	A) Allow it. Prolook checks the request by hand anyway. B) Require email confirmation (for example a one-time code) before the request is sent. C) Allow requests only after sign-in (native account or Account Page). Suggested: B.	Anyone could file requests in another rep's name, or flood Prolook with false requests.
Q-18	P2	Gap	Who at Prolook receives brand access requests, and how? How is the rep told when access is granted, for example by email, by the card changing, or both?	OI-15. Landing Page (Open Questions): "**Access requests:** who at Prolook receives brand access requests, and how is the rep told when access is granted?" (the same question is open on the Account Page). Account Page (Epic B — Access granted): "the card changes from Access pending to the state that lets the rep connect it." System Emails lists no "access granted" email.	A) Requests go to a shared Prolook inbox or queue. The rep gets an email and the card updates. B) Requests go to a named admin role in the review tool. The card updates only. Suggested: A, and add the email to System Emails.	We can't build the access-request service. Reps may never find out that they were given access.
Q-19	P2	Gap	What happens to a rep who arrives from a Customizer but whose email has no dealership in qx7? The Landing Page only sends reps who sign up natively to business registration.	OI-4. Landing Page (Epic C — New-org prompt): "Given a rep **signs up** and is **not associated with a dealership**" and (Epic D — Dealership check): "If none is found, the rep enters business registration (Epic C)." Epic A and Epic B describe no dealership check for Customizer-path reps.	A) They go to business registration, the same as native reps. B) They are blocked and told to contact Prolook. C) This can't happen, because every Customizer account belongs to a dealership. Suggested: confirm C. If C is not true, use A.	These reps could get into the workspace with no dealership, no brands and no gate, or hit a dead end.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-20	P2	Gap	How does a new native rep join a dealership that already exists in Team Stores if their email isn't in qx7 yet, for example a new employee at an existing dealer? Today they would be sent to register a brand-new business.	Landing Page (Epic D — Dealership check): "If a dealership association is found, their entitled brands are surfaced for connection (Epic E). If none is found, the rep enters business registration (Epic C)."	A) They register a new business, and Prolook merges it with the existing dealership during review. B) Add a "My dealership is already on Team Stores" option that sends a join request to Prolook or the dealership. C) Prolook must add the rep to qx7 first. Suggested: B or C.	We would get duplicate dealerships, and possibly split stores and earnings.
Q-21	P2	Gap	What does a rep see while their business registration is being reviewed, if it is denied, and if their access "expires"? Does the 24–48 hour review time apply to Stripe registrations? What expires, and when?	OI-5. Landing Page (Epic C — No access until approved): "the rep has **no access to Team Stores**." vs Access - Authentication (Epic A): "a “pending review” state that clearly states verification is a **manual process** with a typical **24–48 hour** turnaround" and (Epic B): "Given an admin denies, then the applicant is informed of the denial." and (Scenarios): "a returning user whose pass has expired re-applies." and (Open Questions): "does the 24–48 hr turnaround also apply to Stripe business registrations?" Prototype: the FAQ says "We verify it instantly through Stripe, so there's no waiting period", but the form leads to an "Awaiting Approval (24–48 hours)" screen, and a separate "Verifying with Stripe – no manual review, no waiting" screen also exists. Please confirm manual review is correct and the "instant" wording must go.	A) Use the Access page's pending and denied screens for both forms. 24–48 hours applies to both. Access does not expire. B) As A, but access expires yearly and must be renewed. Suggested: A. Please also say whether a denied rep can apply again.	The pending, denied and expired screens and their wording can't be built. "Expired" can't be built at all.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-22	P2	Gap	Native sign-up asks only for an email and password, but the Account Page shows name, phone and address for native reps. Where do these details come from? Should sign-up ask for them, and can the rep edit them?	OI-17. Landing Page (Epic D — Sign up): "they create a Team Stores account with an email and a password" vs Account Page (Epic A): "the following are **view-only**: **First & Last Name, Email Address, Phone Number, Country, State, City, Zip Code**" and "For native-account reps, they come from their Team Stores account" and Account Page (Open Questions): "**Native profile data:** where does a native-account rep with no Customizer or qx7 record get their name and contact details, and can they edit them here?" Prototype: adds a second sign-up step, "Tell us about yourself", with first name, last name, phone, country, state, city and zip, all required (option A).	A) Sign-up also asks for name and phone, and the address comes from business registration. Native reps can edit their own details on the Account Page. B) Take them from qx7 or the Stripe registration only, read-only. Suggested: A.	The sign-up form and the Account Page can't be finished for native reps, and their header name and avatar would be blank.
Q-23	P2	Conflict	If someone signs up with an email that already has a Team Stores account, sending them to account linking tells them that the email is taken. The spec says elsewhere never to reveal this. Which rule wins?	OI-24. Landing Page (Epic D — Existing email): "then **no second account is created**; the rep is routed to account linking (Epic E)." vs Landing Page (Epic D — Failed sign-in message): "without revealing whether the email has an account." and (Password reset request): "the same confirmation message is shown whether or not the email has an account"	A) Accept it: showing that an email already has an account during sign-up is common practice. B) Always say "Check your email to continue", and email the owner either a verify link (new account) or a "sign in or link your account" link (existing account). Suggested: B.	The security rule and the sign-up flow contradict each other, so one of them will be built wrong.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-24	P2	Gap	The sign-in emails (verify your email, reset password, password changed) are not in the System Emails list. Who writes their content? Must they always be sent, even when a rep has switched emails off in Workspace Settings?	OI-8. Landing Page (Epic D): "must **verify their email** before the account is active", "a reset link is emailed only if it does", "a confirmation email is sent to the account email" vs System Emails (Amendment): "this page remains the source of truth for the inventory, triggers, recipient sets, content, and timing" and System Emails (Epic): "a send occurs **only if that email is enabled for the workspace** in Workspace Settings, and only if the **All Emails** master toggle is on."	A) Add them to System Emails as "always sent" security emails that can't be switched off. B) Keep them outside System Emails, owned by the sign-in service. Suggested: A, so all emails are listed in one place.	A rep could switch off their own password-reset email and lock themselves out. The content and sender of these emails would be guessed.
Q-25	P2	Conflict	Can a rep connect a brand from the welcome modal, or only from the Account Page? The Landing Page allows both, but the Workspace page says only the Account Page handles brand connections.	OI-10. Landing Page (Epic E — Connect a brand): "they can connect a brand Customizer they're entitled to from the welcome modal or the Account page." vs Workspace (Epic D): "**Connecting one is done on the account page.** … one page owns the rep's brand relationships rather than splitting them between a page and a menu."	A) Both: the welcome modal includes a connect step on first visit, and the Account Page handles it after that. B) Only the Account Page: the welcome modal just links there. Suggested: A, and update the Workspace page (its rule was about the menu, not the welcome modal).	This decides whether the welcome modal needs its own connect flow, with password entry and "Request access" cards inside it.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-26	P2	Conflict	To add products from a brand, does the rep need a connected brand, or is it enough that their dealership may sell that brand in qx7? The Landing Page and Account Page say a connection is needed, but the Add Products brand picker lists every brand the dealership may sell.	OI-7. Landing Page (Epic E — Purpose of a connection): "Adding products from that brand is what it unlocks in Team Stores." Account Page (Epic B): "A brand the rep has not connected on this page, including any brand in the Request access or Access pending state, is not selectable there." vs Customize New Product (Epic A): "the SOURCE pill resolves against QX7 and offers only the brands that rep's dealership is entitled to sell." and "Given QX7 returns exactly one entitled brand, when the page loads, then the pill resolves to that brand automatically"	A) A connection is needed. The picker shows only connected brands, and the one-brand shortcut uses connected brands. B) Being able to sell the brand in qx7 is enough. Suggested: A, and update Customize New Product and Products Tab to match.	Add Products could offer brands the rep can't actually open, or the brand connection would be pointless.
Q-27	P2	Conflict	Should brand connections be saved on the rep's account so they survive signing out, clearing the browser or switching browsers? Today the spec says only brands with matching emails reconnect automatically, so brands connected under a different email would be lost.	OI-14. Landing Page (Epic E — Customizer-path connections): "are recorded as brand connections on their user record" vs Landing Page (Epic E — Session reset): "Brands whose Customizer email matches qx7 are reconnected automatically at the next sign-in." and Landing Page (Open Questions): "**Connection persistence:** should brands connected under a different email be stored on the rep's Team Stores account so they survive a new session, cleared cache or a different browser?"	A) Save all connections on the account. Ask the rep to sign in to a brand again only if its Customizer stops accepting the saved connection. B) Save only connections with matching emails, and ask the rep to reconnect the others at every sign-in. Suggested: A, pending developer confirmation of how long each Customizer accepts a saved connection.	This decides how connections are stored. With B, reps lose brands every time they sign in again, which defeats "one Team Stores account".

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-28	P2	Gap	When a rep logs out of Team Stores, are they also logged out of the Customizer? Where do they land afterwards? If they click "Team Store" in the Customizer again, should they be signed straight back in?	OI-11. Landing Page (Open Questions): "**Logout scope:** does logging out of Team Stores end the Customizer pass-through, and can a natively logged-out rep be silently signed back in from the Customizer header?" Workspace (Epic D — Logout): "**OPEN:** … whether logout terminates only the Team Stores session or the propagated Customizer session as well, and where the rep lands (splash page vs. Customizer)."	A) Log out of Team Stores only, and land on the splash page. Clicking "Team Store" in a signed-in Customizer signs them back in. B) Log out of both, and land on the splash page. C) Log out of Team Stores only, and require a fresh sign-in the next time they come from the Customizer. Suggested: A for convenience, or B if reps share computers.	We can't build logout. A rep on a shared computer may think they are signed out when they are not.
Q-29	P2	Gap	Do native Team Stores accounts need a second sign-in step (multi-factor authentication, for example a code sent by text or an authenticator app)?	OI-12. Landing Page (Open Questions): "**MFA:** is multi-factor authentication required for native accounts?" Access - Authentication (Epic A) stores "EIN, banking details" for the business.	A) Required for all native accounts. B) Optional, and the rep can turn it on. C) Not at launch. Suggested: B at launch, or A if the account can see banking or payout details.	This adds a step to sign-in and new screens. It is costly to add after launch.
Q-30	P3	Gap	What happens if a rep clicks "Team Store" in the Customizer while this browser is already signed into Team Stores as a different person?	Landing Page (Epic A — Same-session pass-through): "Given a rep is **already logged into a Customizer**, when they select Team Store, then the Team Store platform is **already authenticated** with those same credentials" Landing Page (Epic B — Direct entry): "or on the Overview if they already have an active Team Stores session."	A) The Customizer sign-in wins: sign out the old Team Stores user and sign in the new one. B) Keep the existing Team Stores user and show a warning. Suggested: A.	One rep could end up working in another rep's workspace on a shared computer.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-31	P3	Ambiguous	A rep who signs in on the splash page with their Customizer password didn't arrive "automatically". Which version of the welcome modal do they see?	Landing Page (Epic A2 — Auto sign-in recognition): "Given the rep arrived from a signed-in Customizer, then the welcome modal displays a **"Signed in automatically"** confirmation" Landing Page (Epic A2 — Native-path variant): "Given the rep signed in natively"	A) The Customizer version, without the "Signed in automatically" line, with the chosen brand preselected. B) The native version. Suggested: A.	The wrong message could confuse first-time reps.
Q-32	P3	Ambiguous	Is "first visit" counted once per person, or once per sign-in method or browser? For example, if a rep first enters through a Customizer and later signs in natively, do they see the welcome modal again?	Landing Page (Epic A2 — First-visit trigger): "*(Shown on first visit; not repeated on subsequent entries.)*" Landing Page (Dependencies & Technical Constraints): "a **first-visit flag** per rep" Prototype: remembers "welcomed" only for the current browser session, so the modal shows again in every new session.	A) Once per person, saved on the account (not shown again for linked sign-ins or new browsers). B) Once per sign-in method. Suggested: A.	Reps could see the welcome modal repeatedly, or never see the native "connect your brands" version.
Q-33	P3	Ambiguous	What is the "parent label" on each brand card in the welcome modal? Is it the parent company, the dealership, or something else?	Landing Page (Epic A2 — Primary Brand Selection): "presents each entitled brand as a selectable card (logo + brand name + parent label)."	A) The brand's parent company (for example, "by Prolook"). B) The dealership that grants the brand. C) Whether the brand is owned or licensed (Customize New Product mentions "Brand type (owned/manufactured vs. licensed)"). Please confirm the wording and where it comes from.	The card design and the data it needs are unclear.

Q-34	P3	Gap	What should the "transitional / loading state" between the Customizer and the Overview look like? Is it the existing "Global loading overlay"? How long can it show, and what happens if sign-in fails partway?	OI-9. Landing Page (Epic B — Transitional state): "**NEEDED:** a transitional state between the Customizer and the Overview must exist for the already-logged-in path." vs System Modals & Toasts (Modal inventory): only "Global loading overlay" is listed. The "Welcome to Team Stores", "Continue to Team Stores" and "Choose a Customizer" modals are not in that list either.	A) Reuse the Global loading overlay. After about 10 seconds or on failure, send the rep to the splash page with a short message. B) A new branded hand-off screen. Suggested: A. Please also register the three new modals in System Modals & Toasts.	Reps may see a blank or stuck page if the hand-off fails.
Q-35	P3	Gap	If someone types an email on the splash page that isn't in qx7 but already has a native Team Stores account, should they be offered "Sign in" instead of "Sign up"?	Landing Page (Epic B — Email not found): "Given the email is **not** found in qx7, then the rep is offered the option to **sign up for a Team Stores account** (Epic D) instead."	A) Always show both "Sign in" and "Sign up with a Team Stores account". B) Show only "Sign up", and let the existing-email rule handle it. Suggested: A, which also avoids revealing whether the account exists.	Returning native reps would be pushed into sign-up by mistake.
Q-36	P3	Gap	What happens if Prolook refuses a brand access request? Can a rep cancel a pending request, and does a request ever expire?	Landing Page (Epic B — Request access): "The rep cannot submit a duplicate request for that brand while it is pending." Account Page (Epic B — Access granted) describes only the approval outcome.	A) Prolook can deny with a reason. The card goes back to "Request access" and the rep is told. B) Requests stay pending until approved. Suggested: A. Please also say whether reps can cancel.	A denied rep would see "Access pending" forever and could never ask again.
Q-37	P3	Gap	How long does the email verification link last? Can the rep ask for a new one? What does an unverified rep see if they try to sign in?	OI-23. Landing Page (Epic D — Sign up): "must **verify their email** before the account is active."	A) The link lasts 24 hours and there is a "Resend" button. Signing in while unverified shows "Please verify your email" with a resend option. Suggested: A.	The verification flow is incomplete, and reps whose link expired would be stuck.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-38	P3	Gap	Please fill in the missing lockout rules. What happens when someone tries an email that has no account? Is there a limit per device or network? Does the lockout message reveal that the account exists? Does the failure count reset after a successful sign-in or a password reset?	OI-20. Landing Page (Epic D — Lockout): "Given **5 consecutive failed sign-in attempts** on an account, then sign-in for that account is paused for **15 minutes**, and the rep is shown the option to reset their password."	A) Show the same message for real and unknown emails. Add a limit per network. Reset the count after a successful sign-in or a password reset. Suggested: A.	The lockout can be gamed to find real accounts, or to keep a real rep locked out.
Q-39	P3	Gap	Do the lockout rule and the "Email or password is incorrect" message also apply when a rep types a brand's Customizer password into Team Stores?	OI-13. Landing Page (Epic B — Selection sets primary): "they are prompted to **enter their password** for that account." vs Landing Page (Epic D — Lockout) and (Failed sign-in message), which speak only of Team Stores sign-in.	A) Yes, the same rules apply. B) No, the brand's Customizer applies its own rules and Team Stores only passes on its message. Suggested: B (if Q-1 picks the hand-off, this question goes away).	Customizer password entry could be left without any protection against repeated guessing.
Q-40	P3	Gap	Who decides an account "may be compromised" and forces a password change, and how is the rep told?	Landing Page (Epic D — No forced expiry): "A change is required only if the account is suspected to be compromised."	A) A Prolook admin can flag the account. The rep must set a new password at next sign-in and gets an email. B) Automatic, when the password appears on a breached-password list. Suggested: A, plus B at sign-in.	Nobody would be able to trigger a forced password change.
Q-41	P3	Gap	If a rep connects a brand Customizer account that isn't tied to their dealership in qx7, what message do they see, and what can they do next?	Landing Page (Epic E — Connect a brand): "A connection is valid only when the connected Customizer account maps to the rep's dealership in qx7."	A) Show "This account isn't linked to your dealership. Try another email or request access", with both buttons. Suggested: A.	The error case would be built with no wording or next step.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-42	P3	Gap	How long does a Team Stores sign-in last? Is there an idle timeout, and is there a "Keep me signed in" option?	OI-22. Landing Page (Epic E — Session reset): "Given a rep clears their session or browser cache, or opens Team Stores in a different browser, then their Team Stores session ends and they must sign in again by either path."	A) Sign out after 8 hours idle, with a maximum of 30 days if "Keep me signed in" is ticked. B) Stay signed in until logout. Suggested: A.	The sign-in lifetime is unknown, which affects both security and how often reps have to sign in again.
Q-43	P3	Ambiguous	What do these two targets measure: "Time-to-section under 3s from landing" and "mis-clicks bouncing back to brand home"? What is the "section", and what is the "brand home"?	OI-19. Landing Page (Metrics & Success Criteria): "Time-to-section under 3s from landing" and "\< 1% mis-clicks bouncing back to brand home per session"	A) "Section" means the Overview, measured from clicking "Team Store" (or submitting sign-in) to the Overview being usable. "Brand home" means the Customizer the rep came from. B) Something else (please define). Suggested: A.	These targets can't be measured or tested as written.
