Prototype Answers — Team Stores Landing Page

Prototype: input/prototype/Team Stores (static HTML pages plus React JSX, no backend; source read only, nothing run) · Questions: 43 · Answered 5 · Partial 21 · Contradicts 3 · Not in prototype 14

How to read the evidence column: - `Landing Page.dc.html` = `input/prototype/Team Stores/Landing Page.dc.html` (the splash page and all its sign-in pop-ups). - `workspace-app.jsx` = `input/prototype/Team Stores/workspace-app.jsx` (the workspace behind `Workspace.dc.html`). - `workspace-app-integrated.jsx` = `input/prototype/Team Stores/workspace-app-integrated.jsx` (the Marucci copy of the workspace, behind `Marucci Workspace.dc.html`). It has the same sign-in screens as the main copy, at line numbers about 15–25 higher. The one difference that matters here: the Marucci copy gives the rep two brands (PROLOOK and Victus) instead of one. - The prototype has a "Tweaks" panel: a designer's control panel for switching between demo situations (for example "Dealership has Team Stores access" on/off). Answers that depend on a switch say so. - "qx7" is Prolook's dealership database. "Customizer" is a brand's own design website.

Screens found

- Splash page: header with Team Stores logo and "SIGN IN" (or the rep's name if signed in), hero "One dashboard to launch every team store." with "Enter Team Stores", six feature cards, FAQ "Sign-in, brands & onboarding", "Ready to open your dashboard?" band, footer — Landing Page.dc.html:45–295
- "Sign in to Team Stores" pop-up: Team Stores email and password, "Forgot password?", "Sign in With Customizer", "Create an account" — Landing Page.dc.html:311
- Sign-up step 1 "Create your Team Stores account" (email, password, live checklist) — Landing Page.dc.html:358
- Sign-up step 2 "Tell us about yourself" (name, phone, country, state, city, zip) — Landing Page.dc.html:406
- After sign-up: "Account created / Checking … against our dealership records", "No organization found", "Connect your brands?" — Landing Page.dc.html:488, :500, :512
- "Reset your password" and "Check your email" — Landing Page.dc.html:547, :567
- Customizer path: "Continue with a Customizer" (email), "Choose a Customizer", "Sign in to [brand]" (Customizer password), "You're signed in" — Landing Page.dc.html:580, :603, :671, :704
- "Welcome to Team Stores" pop-up with Primary Brand Selection (splash-page copy, opened from the Tweaks panel only) — Landing Page.dc.html:725
- "Welcome to Team Stores" pop-up shown over the Overview (workspace copy, the one reps actually see) — workspace-app.jsx:27499 (Marucci copy: workspace-app-integrated.jsx:27523)
- No-access screens: access gate, "Register Your Organization" form, "Your Organization Is Awaiting Approval", "Verifying with Stripe" — workspace-app.jsx:1872, :2095, :2238, :2322
- My Account: Personal Info (editable for Team Stores accounts, read-only for Customizer-only reps), Sign-in & Security (Team Stores password, "Link account"), Authorized Brands with primary star, "Add a brand" picker with Request access, Change/Create password pop-up — workspace-app.jsx:26951
- "Choose a brand" picker before Add Products — workspace-app.jsx:12446
- Team Manager Portal preview (coach view, opened from a store invite) — workspace-app.jsx:31660
- "Log out of Team Stores?" confirmation — workspace-app.jsx:28479
- Note: the links between pages point to file names that aren't in the folder ("Team Stores Workspace.dc.html", "Team Stores Landing.dc.html", "Team Store Storefront.dc.html"). The real files are Workspace.dc.html / Marucci Workspace.dc.html, Landing Page.dc.html and Storefront.html, so clicking from one page to another doesn't work as packaged.

Answers

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-1	P1	Partial	The prototype builds option A everywhere. On the splash page, after picking a brand, the rep types that brand's Customizer password into a Team Stores box and clicks "Authenticate & Enter". On My Account, "Log In to Brand" / "Connect" also asks for the Customizer email and password inside Team Stores. Any password is accepted. Still open: whether a hand-off to the brand's own sign-in page (option B) should replace this.	Landing Page.dc.html:685 — `placeholder="Enter your Customizer password"` ; Landing Page.dc.html:698 — `<button onClick="{{ doSignIn }}" …>Authenticate & Enter</button>` ; workspace-app.jsx:27004 — `if (!loginBrand || !creds.email || !creds.password) return;`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-2	P1	Partial	In the prototype, access is decided per dealership, not per rep or sign-in method. A designer switch, "Dealership has Team Stores access", decides it. When it's off, every rep (Customizer or native) goes straight to the business registration form. When it's on, everyone goes straight in. A native rep whose email matches a dealership and who connects a brand also goes straight in. This is closest to option A or C. Still open: the business rule itself.	Landing Page.dc.html:839 — `Dealership has Team Stores access`; Landing Page.dc.html:929 — `this.gotoWorkspace(this.state.chosen, true, "customizer");` ; Landing Page.dc.html:1059 — `setTimeout(() => this.gotoWorkspace("prolook", false, "native-connected"), 1500);`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-3	P1	Partial	The prototype has one form for everyone who is blocked: native reps with no dealership and Customizer reps whose dealership has no access. It's titled "Register Your Organization" and asks for legal name, entity type, address, EIN, bank routing and account number. The page says the details are "collected securely through Stripe", but the form is built into Team Stores, not generated by Stripe. This is closest to option A (one form). Still open: whether Stripe hosts it.	workspace-app.jsx:2105 — `const REQUIRED = ["legalName", "entityType", "address", "ein", "routing", "account"];` workspace-app.jsx:2165 — `We couldn't match your email to an existing dealership. Provide your organization's` workspace-app.jsx:27661 — `try { if (new URLSearchParams(window.location.search).get("access") === "none") return "access-form"; } catch (e) {}`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-4	P1	Partial	The prototype follows option C. Matching emails link automatically: My Account shows "Linked automatically — matching email". When emails differ, the rep clicks "Link account" on My Account and signs in to the Customizer. Signing up with an email that already has an account shows "An account already exists… Sign in and we'll link your accounts automatically." There is no separate linking screen. Still open: confirming the rule and designing that screen.	Landing Page.dc.html:388 — `An account already exists for <strong …>{{ emailValue }}</strong>. <button onClick="{{ goHome }}" …>Sign in</button> and we'll link your accounts automatically.` ; workspace-app.jsx:27129 — `{info.email} · Linked automatically — matching email` ; workspace-app.jsx:27134 — `openLogin({ id: "prolook", name: "Prolook", desc: "Primary customizer & catalog" }, false, true)`	Medium
Q-5	P2	Not in prototype	Where accounts and passwords are stored is a server decision. A front-end prototype can't show it. Searched: identity service, database, user record, qx7 storage — no match beyond on-screen text.	—	—

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-6	P2	Partial	The only clues are on the store invite screen and the coach portal. The invite says "The invitee gets an email link to set a password for the Team Manager Portal", which suggests coaches get their own portal password (closer to option B). The portal itself opens as a "Rep preview" straight from the invite, already "Signed in as team manager", with no sign-in screen, business gate or welcome pop-up. Still open: how coaches actually sign in.	workspace-app.jsx:31351 — `The invitee gets an email link to set a password for the Team Manager Portal.` ; workspace-app.jsx:31681 — `TEAM MANAGER PORTAL` ; workspace-app.jsx:31693 — `SIGNED IN AS TEAM MANAGER`	Low

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-7	P2	Partial	The prototype leans to option A. In the Marucci copy, the second brand (Victus) simply appears on My Account as a connected brand, "Linked automatically — matching email" and "Single sign-on". The account menu's "Customizer" items just open each brand's website in a new tab, with nothing to show the rep is signed in there. Still open: whether a live sign-in on each brand website is expected.	workspace-app-integrated.jsx:26891 — `{ id: "victus", name: "Victus", desc: "Bats & baseball gear customizer", connected: true, sso: true },` ; workspace-app-integrated.jsx:27160 — `{info.email} · Linked automatically — matching email` ; workspace-app-integrated.jsx:28133 — `window.open("https://customizer.victussports.com/", "_blank", "noopener"); setToast("Opening the Victus Customizer in a new tab…");`	Low

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-8	P2	Partial	Three places in the prototype claim to set the primary brand: (1) the splash-page brand choice ("The one you pick becomes your primary brand"); (2) the welcome pop-up's "Confirm & Enter"; (3) the star on My Account. Every time the workspace opens, it starts with the brand the rep came in with, so a fresh sign-in overrides any earlier choice (option B). The welcome choice is also not carried over to My Account: My Account always starts with PROLOOK as primary. Still open: which of these should be allowed.	Landing Page.dc.html:606 — `The one you pick becomes your primary brand.` ; workspace-app.jsx:27683 — `const [primaryBrand, setPrimaryBrand] = React.useState(ssoOriginId);` ; workspace-app.jsx:27691 — `setPrimaryBrand(chosen || ssoOriginId);` ; workspace-app.jsx:26982 — `const [primaryId, setPrimaryId] = React.useState("prolook");`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-9	P2	Partial	The prototype treats it as per visit. The welcome wording says "set it as your primary brand for this workspace session". The workspace resets the primary brand to the brand the rep entered with each time it loads, and My Account resets to PROLOOK. A prototype can't save anything, so this doesn't settle whether it should be saved on the account.	workspace-app.jsx:27534 — `Customizer account and set it as your primary brand for this workspace session.` ; workspace-app.jsx:27683 — `const [primaryBrand, setPrimaryBrand] = React.useState(ssoOriginId);`	Low
Q-10	P2	Partial	Native reps never see the brand picker in the prototype. They get "Connect" buttons instead. In the welcome pop-up, a brand they connect becomes primary; if they connect none, no primary is set. In the "Connect your brands?" step right after sign-up, PROLOOK is ticked in advance. That matches option A, but the prototype only ever shows one brand to native reps, so the several-brands case isn't shown.	workspace-app.jsx:27604 — `onClick={() => onConfirm(native ? (anyConnected ? originId : null) : primary)}` ; Landing Page.dc.html:954 — `if (found) this.setState({ step: "connect", connectSel: { prolook: true } });` ; Landing Page.dc.html:977 — `const welcomeMulti = !welcomeNative && (this.props.welcomeMultiBrand ?? false);`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-11	P2	Answered	For native reps the button reads "Continue to Workspace" and can always be clicked, even with no brand connected. The note under it says "No primary brand is set until you connect one. You can connect brands later from My Account." This is option A, with different button wording.	workspace-app.jsx:27610 — `{isMulti ? "Confirm & Enter" : "Continue to Workspace"}` ; workspace-app.jsx:27561 — `"No primary brand is set until you connect one. You can connect brands later from My Account."`	High
Q-12	P2	Answered	Only connected brands can be primary (option A). On My Account, the primary star is greyed out on any brand that isn't connected, with the hint "Connect this brand to set it as your primary."	workspace-app.jsx:27191 — `const canPrimary = b.connected;` ; workspace-app.jsx:27224 — `? "Connect this brand to set it as your primary."`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-13	P2	Answered	The prototype follows option A: sign in, then the dealership check, then the registration form and "Awaiting Approval" if needed, then the Overview. The welcome pop-up can't appear on the gate screens; it only appears once the rep reaches the Overview, so after approval. On approval it shows at the same time as the message "Organization approved — welcome to Team Stores". A native rep who connects brands right after sign-up skips the welcome pop-up.	workspace-app.jsx:28193 — `onSubmit={() => setScreen("access-pending")}` ; workspace-app.jsx:28205 — `onApprove={() => unlockFromGate("Organization approved — welcome to Team Stores")}` ; workspace-app.jsx:27678 — `if (a === "native-connected") { setTweak("authMode", "linked"); try { sessionStorage.setItem("ts_sso_welcomed", "1"); } catch (e2) {} setShowWelcome(false); }`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-14	P2	Partial	The prototype has a full splash design. The header has the logo, "TEAM STORES" and "SIGN IN" only, with no marketing menu. The hero reads "One dashboard to launch every team store." with "Enter Team Stores" and "See how it works", and an optional dashboard preview. Below that are six feature cards, a five-question FAQ, a closing "Ready to open your dashboard?" band and a footer link "See a live team store". All content is fixed. Still open: the "top-level marketing nav" and whether a CMS is needed.	Landing Page.dc.html:70 — `One dashboard to launch every team store.</h1>` ; Landing Page.dc.html:202 — `Everything a rep needs to run stores without the mistakes.` ; Landing Page.dc.html:243 — `Sign-in, brands & onboarding`	High
Q-15	P2	Partial	The prototype reveals it (option A). Any email typed shows either "Brands linked to [email]" with the brand list, or "We couldn't find [email] in our dealership records". No proof of email ownership is asked. Still open: whether this is acceptable.	Landing Page.dc.html:606 — `Brands linked to <strong …>{{ emailValue }}</strong>.` ; Landing Page.dc.html:662 — `We couldn't find <strong …>{{ emailValue }}</strong> in our dealership records.`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-16	P2	Partial	The prototype shows both ideas. In My Account's "Add a brand" picker, a brand is either "Connect", "no account" (with both "Request access to this brand" and "Sign in with a different email") or "Access pending", so there's no separate "Sign in" state (option A). But the main brand list shows a "Log In to Brand" button on any brand that isn't connected. Still open: whether that separate state can really be detected.	workspace-app.jsx:26949 — `const BRAND_ADD_STATE = { riddell: "no-account", legends: "pending" };` ; workspace-app.jsx:27367 — `<button onClick={() => openLogin(b, true)} …>Sign in with a different email</button>` ; workspace-app.jsx:27253 — `<IconLock size={15} /> Log In to Brand`	Medium
Q-17	P2	Partial	Yes in the prototype (option A). On the splash page, after typing any email, "Request access to this brand" immediately marks the card "Access pending · request sent to Prolook", with no sign-in or email check. Still open: whether that's acceptable.	Landing Page.dc.html:645 — `<button onClick="{{ c.onRequest }}" …>Request access to this brand</button>` ; Landing Page.dc.html:640 — `Access pending · request sent to Prolook`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-18	P2	Partial	The prototype shows only the rep's side. A message says "Access to [brand] requested — Prolook will set up your account" and the card reads "we'll let you know when it's ready". Who receives the request, and whether the rep is told by email, isn't shown.	workspace-app.jsx:27366 — `onToast(`Access to ${b.name} requested — Prolook will set up your account`)` ; workspace-app.jsx:27351 — `"Access request sent to Prolook — we'll let you know when it's ready."`	Medium
Q-19	P2	Partial	In the prototype, a rep already signed into a Customizer whose dealership has no access goes straight to "Register Your Organization" (option A), which opens with "We couldn't match your email to an existing dealership". On the splash-page Customizer path, an email not in dealership records is offered "Sign up for a Team Stores account" instead. Still open: whether this case can really happen (option C).	Landing Page.dc.html:1012 — `if (signedIn) this.gotoWorkspace(brandId, !hasAccess, "customizer");` ; workspace-app.jsx:2165 — `We couldn't match your email to an existing dealership.` ; Landing Page.dc.html:663 — `Sign up for a Team Stores account`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-20	P2	Not in prototype	There's no "join an existing dealership" option. A native rep with no dealership match always gets "No organization found" and is sent to register a new organization. Searched: join, already on Team Stores, existing dealership, invite rep — no match.	—	—

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-21	P2	Contradicts	The prototype disagrees with itself and with the requirement. The gate screen says details "are reviewed by a PROLOOK admin — typical turnaround 24–48 hours", and the form leads to "Your Organization Is Awaiting Approval" ("you'll land here each time you sign in until it's approved, and we'll email [you] the moment a decision is made"). That matches Prolook review. But the splash-page FAQ says "We verify it instantly through Stripe, so there's no waiting period", and a second screen, "Verifying with Stripe", says "no manual review, no waiting". Requirement: "it is **reviewed internally by someone at Prolook**, who approves or denies it". There's no denied screen and nothing about expiry. The "Continue to Overview" button on the waiting screen is marked prototype-only.	workspace-app.jsx:2002 — `Business entity, EIN, and banking details are reviewed by a PROLOOK` ; workspace-app.jsx:2282 — `24–48 hours</strong>.` ; Landing Page.dc.html:259 — `We verify it instantly through Stripe, so there's no waiting period` ; workspace-app.jsx:2370 — `This only takes a moment — no manual review, no waiting.` ; workspace-app.jsx:2311 — `Prototype only — this button will not exist in production`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-22	P2	Answered	Sign-up asks for them. Step 2, "Tell us about yourself", requires first name, last name, phone, country, state, city and zip, and the button stays off until all are filled. The wording says "You can edit it anytime from My Account". On My Account, reps with a Team Stores account get an "Edit" button and "Personal info saved to your Team Stores account"; reps who only use a Customizer see "Read-only". This is close to option A, except that the address is also asked at sign-up. Note: this disagrees with the Account Page's "view-only" wording.	Landing Page.dc.html:414 — `Reps who sign in with a Customizer have this pulled in automatically. You can edit it anytime from My Account.` ; Landing Page.dc.html:1006 — `const profileOk = p.firstName.trim() && p.lastName.trim() && p.phone.trim() && p.country.trim() && p.state.trim() && p.city.trim() && p.zip.trim();` ; workspace-app.jsx:26964 — `onToast("Personal info saved to your Team Stores account")` ; workspace-app.jsx:27064 — `<IconLock size={13} /> Read-only`	High
Q-23	P2	Partial	The prototype reveals it (option A). Sign-up shows "An account already exists for [email]" and blocks "Continue". Only three demo email names trigger it in the prototype. Still open: which rule wins.	Landing Page.dc.html:388 — `An account already exists for <strong …>{{ emailValue }}</strong>.` ; Landing Page.dc.html:1004 — `const emailTaken = emailValid && /^(hinglemycringle|demo|existing)@/i.test(s.email.trim());`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-24	P2	Not in prototype	Emails aren't sent in a front-end prototype. The screens only mention them ("we've sent a reset link", "confirmation email sent", "we'll email … the moment a decision is made"). Their wording, owner, and whether they can be switched off aren't shown. Searched: verify email, email template, All Emails toggle for sign-in emails — no match.	—	—
Q-25	P2	Answered	Both (option A). A native rep can connect from the "Connect your brands?" step right after sign-up and from the welcome pop-up's "Connect" button, as well as from My Account. In the two pop-ups, connecting is a single click, with no password and no "Request access" cards. On My Account, connecting asks for the Customizer email and password.	workspace-app.jsx:27553 — `<button onClick={() => setConnected((c) => ({ ...c, [b.id]: true }))}` ; Landing Page.dc.html:520 — `<h3 …>Connect your brands?</h3>` ; Landing Page.dc.html:541 — `Skip for now — connect later from My Account`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-26	P2	Partial	In the prototype, the "Choose a brand" picker before Add Products shows a fixed list of "Customizers the signed-in user is entitled to pull product from" (PROLOOK only, or PROLOOK and Victus in the Marucci copy). It doesn't check what's connected on My Account. So it behaves like option B, but only because the list is hard-wired.	workspace-app.jsx:12437 — `// Customizers the signed-in user is entitled to pull product from. Mirrors the` ; workspace-app.jsx:12442 — `const ACCESSIBLE_CUSTOMIZERS = ["prolook"];` ; workspace-app-integrated.jsx:12453 — `const ACCESSIBLE_CUSTOMIZERS = ["prolook", "victus"];`	Low
Q-27	P2	Not in prototype	Saving connections across sessions and browsers is a server decision. In the prototype, brand connections are lost on refresh (only created stores are kept in the browser). Searched: connection persistence, stored connection, reconnect — no match.	—	—

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-28	P2	Partial	Logout asks "Log out of Team Stores?" with "You're about to sign out of your Team Stores workspace on this device." "Yes, log out" goes to the Team Stores splash page (the link uses a file name that isn't in the folder). Nothing is said or done about the Customizer session. Still open: whether the Customizer is logged out too, and what the Customizer "Team Store" button does next.	workspace-app.jsx:28482 — `You're about to sign out of your Team Stores workspace on this device.` ; workspace-app.jsx:28486 — `window.location.href = encodeURI("Team Stores Landing.dc.html");`	High
Q-29	P2	Not in prototype	There's no second sign-in step. Searched: MFA, two-factor, 2FA, authenticator, one-time code, verification code — no match.	—	—
Q-30	P3	Not in prototype	There's no Customizer screen in the prototype, and no handling of a different person already signed in. Searched: switch user, different account, already signed in as — no match.	—	—

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-31	P3	Contradicts	A rep who types their Customizer password on the splash page enters the workspace marked as "customizer", so the welcome pop-up shows the **"Signed in automatically"** badge and "We've automatically signed you in…", even though they signed in by hand. Requirement: the badge is shown when "the rep arrived from a signed-in Customizer". Only native reps get the version without it.	Landing Page.dc.html:927 — `setTimeout(() => this.gotoWorkspace(this.state.chosen, false, "customizer"), 1700);` ; workspace-app.jsx:27517 — `{!native && (` ; workspace-app.jsx:28502 — `native={tweaks.authMode === "native"}`	High
Q-32	P3	Contradicts	The prototype remembers that the welcome pop-up was seen only for the current browser session. It comes back in every new session and in every new browser (neither option A nor B). Requirement: "*(Shown on first visit; not repeated on subsequent entries.)*" and "a **first-visit flag** per rep".	workspace-app.jsx:27687 — `try { seen = sessionStorage.getItem("ts_sso_welcomed") === "1"; } catch (e) {}` ; workspace-app.jsx:27688 — `if (!seen) setShowWelcome(true);`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-33	P3	Not in prototype	Brand cards in the welcome pop-up show only the logo and brand name, with no third "parent label" line. Searched: parent, parent label, by Prolook, owned, licensed — no match in the welcome pop-up.	—	—
Q-34	P3	Partial	A rep who is already signed in and clicks "Enter Team Stores" goes straight to the workspace with no in-between screen. The only "loading" moment is after signing in through the pop-up: a check-mark animation "You're signed in / Opening your Team Stores dashboard…" for about 1.7 seconds. Nothing handles a failed hand-off. Still open: the design for the already-signed-in path.	Landing Page.dc.html:1012 — `if (signedIn) this.gotoWorkspace(brandId, !hasAccess, "customizer");` ; Landing Page.dc.html:1049 — `"Opening your Team Stores dashboard…"` ; Landing Page.dc.html:927 — `setTimeout(() => this.gotoWorkspace(this.state.chosen, false, "customizer"), 1700);`	High

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-35	P3	Partial	Only "Sign up" is offered (option B). An email not in dealership records sees "Check the address, or create a Team Stores account to get started" with "Sign up for a Team Stores account" and "← Use a different email". When no brand has an account, the extra button is also sign-up only ("Sign up with a Team Stores account"), although the requirement says "Sign in / Sign up". "Back" on the earlier step does return to the Team Stores sign-in pop-up.	Landing Page.dc.html:662 — `Check the address, or create a Team Stores account to get started.` ; Landing Page.dc.html:663 — `<button onClick="{{ goSignup }}" …>Sign up for a Team Stores account</button>` ; Landing Page.dc.html:657 — `<button onClick="{{ goSignup }}" …>Sign up with a Team Stores account</button>`	Medium
Q-36	P3	Partial	Once requested, a brand shows only an "Access pending" badge. There's no cancel button and no "denied" state on either the splash page or My Account. Still open: what happens on denial and whether requests expire. Searched: denied, declined, reject, cancel request, expire — no match.	Landing Page.dc.html:640 — `Access pending · request sent to Prolook` ; workspace-app.jsx:27362 — `<IconClock size={13} /> Access pending</span>`	Medium

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-37	P3	Not in prototype	There's no email-verification step at all: sign-up goes straight to "Account created" and on into Team Stores. Searched: verify your email, verification link, resend, unverified — no match.	—	—
Q-38	P3	Not in prototype	There's no lockout. The only failure message is "Email or password is incorrect", shown when the demo password "wrong" is typed. Searched: lockout, locked, 15 minutes, too many attempts — no match.	—	—
Q-39	P3	Not in prototype	The Customizer password step accepts any password and has no error message or lockout. Searched: error and attempt handling in the Customizer sign-in step — none.	—	—
Q-40	P3	Not in prototype	Searched: compromised, forced password change, must change password — no match.	—	—

ID	Priority	Status	Answer from prototype	Evidence (file:line — quoted code)	Confidence
Q-41	P3	Not in prototype	Connecting a brand always succeeds in the prototype. Searched: isn't linked to your dealership, wrong dealership, not mapped — no match.	—	—
Q-42	P3	Not in prototype	Searched: keep me signed in, remember me, idle timeout, session timeout — no match.	—	—
Q-43	P3	Not in prototype	Measurement targets aren't something a prototype shows. Searched: analytics, tracking, time-to — no match.	—	—

Answered — no need to ask the US team

5 question(s) the prototype settles. Remove these from the list sent to the requirement owners.

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-11	P2	A native rep with no connected brands sees the welcome modal, but "Confirm & Enter" needs a primary brand to be selected. How does this rep get past the modal?	For native reps the button reads "Continue to Workspace" and can always be clicked, even with no brand connected. The note says "No primary brand is set until you connect one. You can connect brands later from My Account."	workspace-app.jsx:27610 — `{isMulti ? "Confirm & Enter" : "Continue to Workspace"}` ; workspace-app.jsx:27561 — `"No primary brand is set until you connect one. You can connect brands later from My Account."`	High
Q-12	P2	Can a brand the rep is entitled to but hasn't connected yet (their Customizer account uses a different email) be chosen as primary? If it can, what should the account menu's "Customizer" shortcut open for it?	No. Only connected brands can be primary. The star is greyed out with "Connect this brand to set it as your primary." The second half of the question doesn't arise.	workspace-app.jsx:27191 — `const canPrimary = b.connected;` ; workspace-app.jsx:27224 — `? "Connect this brand to set it as your primary."`	High

ID	Priority	Question	Answer from prototype	Evidence	Confidence
Q-13	P2	On a rep's first visit, in what order do the screens appear? For example: email check, business registration or approval gate, brand connection, welcome modal, then Overview. Does the welcome modal appear before or after a rep is approved?	Sign in, then dealership check, then registration and "Awaiting Approval" if needed, then Overview with the welcome pop-up. The pop-up comes after approval and appears together with "Organization approved — welcome to Team Stores". Native reps who connect brands at sign-up skip it.	workspace-app.jsx:28193 — `onSubmit={() => setScreen("access-pending")}`; workspace-app.jsx:28205 — `onApprove={() => unlockFromGate("Organization approved — welcome to Team Stores")}`	Medium
Q-22	P2	Native sign-up asks only for an email and password, but the Account Page shows name, phone and address for native reps. Where do these details come from? Should sign-up ask for them, and can the rep edit them?	Sign-up step 2 requires first name, last name, phone, country, state, city and zip. Reps with a Team Stores account can edit them later in My Account ("Personal info saved to your Team Stores account"); Customizer-only reps see them read-only. This disagrees with the Account Page's "view-only" wording, so update that page.	Landing Page.dc.html:1006 — `const profileOk = p.firstName.trim() && p.lastName.trim() && p.phone.trim() && p.country.trim() && p.state.trim() && p.city.trim() && p.zip.trim();`; workspace-app.jsx:26964 — `onToast("Personal info saved to your Team Stores account")`	High
Q-25	P2	Can a rep connect a brand from the welcome modal, or only from the Account Page? The Landing Page allows both, but the Workspace page says only the Account Page handles brand connections.	Both: from the welcome pop-up's "Connect" button (and the "Connect your brands?" step after sign-up) and from My Account. Update the Workspace page.	workspace-app.jsx:27553 — `<button onClick={() => setConnected((c) => ({ ...c, [b.id]: true }))}`; Landing Page.dc.html:520 — `<h3 …>Connect your brands?</h3>`	High

Still open for requirement owners

- Q-1 (Partial): The prototype has Team Stores collect the Customizer password, on the splash page and on My Account. Decide whether to keep that or switch to a hand-off to the brand's own sign-in.
- Q-2 (Partial): The prototype gates per dealership. Confirm who must apply and wait.
- Q-3 (Partial): The prototype has one in-app form with EIN and banking. Decide whether Stripe hosts it and whether one form serves everyone.
- Q-4 (Partial): The prototype links matching emails automatically. Confirm the rule and design the linking screen.
- Q-5 (Not in prototype): Decide where native accounts and the single user record live.
- Q-6 (Partial): Decide how coaches sign in. The prototype hints at a separate portal password.
- Q-7 (Partial): Confirm that "automatically signed into" other brands only means they show as connected (what the prototype shows), or define a live sign-in.
- Q-8 (Partial): The prototype lets three places set the primary brand, and they don't share the choice. Pick which are allowed.
- Q-9 (Partial): Decide whether the primary brand is saved on the account or chosen per visit.
- Q-10 (Partial): Decide the native default when there are several brands. The prototype only shows one.
- Q-14 (Partial): Confirm the splash content (the prototype has a full design), the "marketing nav", and whether a CMS is needed.
- Q-15 (Partial): The prototype reveals brands for any typed email. Decide whether that's acceptable.
- Q-16 (Partial): Confirm whether a separate "Sign in" (different email) state can really be detected.
- Q-17 (Partial): The prototype accepts access requests without sign-in. Decide whether that's acceptable.
- Q-18 (Partial): Decide who receives access requests and how the rep is told.
- Q-19 (Partial): Confirm whether a Customizer rep can have no dealership. The prototype sends them to registration.
- Q-20 (Not in prototype): Decide how a new rep joins an existing dealership.

- Q-21 (Contradicts): Pick Prolook review (24–48 hours) or instant Stripe verification, and remove the other wording. Define the denied and expired screens.
- Q-23 (Partial): The prototype reveals "account already exists". Decide which rule wins.
- Q-24 (Not in prototype): Decide who owns the sign-in emails and whether they can be switched off.
- Q-26 (Partial): Decide whether Add Products shows connected brands only or all brands the dealership may sell.
- Q-27 (Not in prototype): Decide whether brand connections are saved across sessions.
- Q-28 (Partial): Decide whether logout also ends the Customizer session. The prototype lands on the splash page.
- Q-29 (Not in prototype): Decide whether native accounts need MFA.
- Q-30 (Not in prototype): Decide what happens when a different rep is already signed in.
- Q-31 (Contradicts): The prototype shows "Signed in automatically" to reps who typed a password. Decide which welcome version they get.
- Q-32 (Contradicts): The prototype repeats the welcome every browser session. Confirm "once per person".
- Q-33 (Not in prototype): Define the "parent label" on brand cards.
- Q-34 (Partial): Design the in-between screen for the already-signed-in path and what happens on failure.
- Q-35 (Partial): Decide whether a returning native rep with an unknown email is also offered "Sign in".
- Q-36 (Partial): Define denial, cancel and expiry for access requests.
- Q-37 (Not in prototype): Define the email-verification link, resend and the unverified sign-in message. The prototype skips verification entirely.
- Q-38 (Not in prototype): Fill in the lockout rules and message.
- Q-39 (Not in prototype): Decide whether lockout applies to Customizer passwords typed into Team Stores.
- Q-40 (Not in prototype): Decide who flags a compromised account and how the rep is told.
- Q-41 (Not in prototype): Write the message for a brand account not tied to the rep's dealership.
- Q-42 (Not in prototype): Set the sign-in lifetime and idle timeout.
- Q-43 (Not in prototype): Define "section" and "brand home" in the metrics.

Missing from the prototype (hidden build work)

16 screen(s), view(s) or control(s) the requirement needs that the prototype doesn't have.

#	Needed by	What's missing	Where it should live	Type of work	Question
M-1	Epic D (Existing email), Epic E (No duplicate accounts)	An account-linking step for someone who signs up with an email that already has a Team Stores account. Today they only see "An account already exists… Sign in" and are sent back to sign-in.	Sign-up pop-up on the splash page	New screen	Q-4
M-2	Epic C (Stripe-generated registration form)	A Stripe-generated business registration form. The prototype has its own built-in "Register Your Organization" form instead.	Not stated (prototype shows it as a full page after sign-in)	Change to existing screen	Q-3
M-3	Epic C (Internal review: "approves or denies it")	A screen that tells a rep their business registration was denied, and what to do next. Only "Awaiting Approval" exists.	Not stated	New screen	Q-21
M-4	Epic E (Account validation on connect), Epic A2 (Native-path variant)	In the welcome pop-up (and the "Connect your brands?" step), a "You don't have an account for this Customizer yet" state with "Request access" and "Sign in with a different email". Today every brand there says "Customizer account found for your email".	Welcome to Team Stores pop-up	Change to existing screen	Q-25, Q-16
M-5	Epic A2 (Primary Brand Selection)	Greyed-out, unselectable brand cards for brands with no Customizer account or a pending access request. The picker lists only brands the rep can use.	Welcome to Team Stores pop-up, Primary Brand Selection	Change to existing screen	Q-12
M-6	Dependencies ("top-level marketing nav")	A marketing menu in the splash-page header. Today the header has only the logo and "SIGN IN".	Splash page header	Change to existing screen	Q-14
M-7	Epic B (Transitional state, "NEEDED")	An in-between loading screen when an already-signed-in rep goes from the Customizer (or the splash page) to the Overview.	Between the Customizer and the Overview	New screen	Q-34

#	Needed by	What's missing	Where it should live	Type of work	Question
M-8	Epic A2 (Primary Brand Selection: "logo + brand name + parent label")	The "parent label" line on each brand card.	Welcome to Team Stores pop-up	Change to existing screen	Q-33
M-9	Epic D (Sign up: "must verify their email")	An email-verification step ("check your inbox"), plus what an unverified rep sees when signing in.	Sign-up pop-up on the splash page	New screen	Q-37
M-10	Epic D (Lockout)	A message after 5 failed sign-ins saying sign-in is paused for 15 minutes, with a "reset your password" option.	"Sign in to Team Stores" pop-up	Change to existing screen	Q-38
M-11	Epic B (No usable brand: "offered **Sign in / Sign up with a Team Stores account**")	A "Sign in" choice next to "Sign up with a Team Stores account" when none of the rep's brands has a Customizer account. Today only sign-up is offered there.	"Choose a Customizer" pop-up	Change to existing screen	Q-35
M-12	Epic E (Connect a brand: "valid only when the connected Customizer account maps to the rep's dealership in qx7")	An error message when a rep connects a brand account that isn't tied to their dealership. Today connecting always succeeds.	Welcome pop-up and My Account (brand connect)	Change to existing screen	Q-41
M-13	Epic B (New tab launch)	A "Team Store" button in the Customizer header that opens Team Stores in a new browser tab. The prototype has no Customizer screen.	Customizer header	New button/link	No question yet
M-14	Epic B (Direct entry: "or on the Overview if they already have an active Team Stores session")	Sending a rep who is already signed in straight to the Overview. The prototype still shows the splash page with their name and an "Enter Team Stores" button.	Splash page	Change to existing screen	No question yet
M-15	Epic D (Reset link, New password on reset)	A "choose a new password" page opened from the reset email, with the live checklist, the "must differ from your current password" rule, and an "expired or already used link" message.	Not stated (opened from the reset email)	New screen	No question yet
M-16	Epic A2 (Confirm & Enter: "Dismissing via close (×) retains the preselected/default primary brand")	A close (×) button on the workspace copy of the welcome pop-up. The splash-page copy has one, but the workspace copy, which reps actually see over the Overview, can't be closed (not even with Esc).	Welcome to Team Stores pop-up over the Overview	Change to existing screen	No question yet
