Clarification Questions — Store Home (Home Tab)

Sources: Store Workspace/Store Home (Home Tab).md, cross-checked against the other 54 pages in Team-Store-Confluence/ (mainly Tabbed Store Dashboard, Launch & Status Controls, Store Status & Lifecycle, Order Management, Store Settings, Roster Management, Products Tab, System Modals & Toasts, Product Categories, Step 1 — Basics, Step 3 — Review & Deploy) · Total: 46 (P1 5 · P2 21 · P3 20)

Terms used below: **Home** is the new first tab in a store's workspace. A **card** is one item in Home's "Needs your attention" list. Each card type has an ID (C-01, C-02 …) and a **tier**: **Blocking** (red, something is stopped), **Action** (blue, work is waiting) or **Informational** (grey, good to know). The **rep** is the store owner using the workspace.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	To launch a store, must it have at least one product that is **visible** to shoppers (Visibility switched on)? Or is one product **added** to the catalog enough, even if hidden? This decides when card C-09 ("Add a product before you launch") and card C-16 ("Your store is ready to launch") appear.	(Home: Epic C — C3 Products) C-09: "Catalog holds zero visible products"; (Home: Epic C — C4 Lifecycle & schedule) C-16: "Store is Draft **and** ≥1 visible product exists". vs (Launch & Status Controls: Acceptance Criteria): "the gate is products added, not published"; (Store Status & Lifecycle: Epic A): "Given a Draft store with **at least one product added**". The Products Tab (Base flow) agrees with Home: "Launch Store is disabled until the catalog contains at least **one visible product**." [OI-18]	A) A visible product is required. Home, Products Tab and the Setup Guide stay as they are. Launch & Status Controls and Store Status & Lifecycle are corrected. B) Any added product is enough. Products Tab is corrected, and C-09 and C-16 count added products. Suggested: A.	Home could say "ready to launch" while the Launch button is still disabled, or the other way round. Two teams could build the launch rule two different ways.
Q-2	P1	Conflict	When should card C-15 appear? C-15 says some players still haven't ordered and the ordering window is closing. Should it start 14 days before the close date, or 7 days (the same time as C-14)? If it's 14 days, which page owns that number?	(Home: Epic C — C4 Lifecycle & schedule) C-15 trigger: "C-14's trigger **and** C-05's trigger both hold" vs note below the table: "**C-14 matches the pill at 7 days. C-15 fires earlier, at 14 days**". (Home: Governing rule 1): "Home must not recompute 'below MOQ', 'days left'…". (Store Settings: Epic E): the days-left pill "turns urgent (red) inside the final 7 days". [OI-3, OI-11]	A) 14 days. Add the 14-day threshold to Store Settings Epic E as its own rule, and change the C-15 trigger to "14 days or fewer left AND C-05 holds". B) 7 days, the same as C-14. Remove "fires earlier". Suggested: A.	The trigger contradicts itself, so the developer has to guess. If Home works out a 14-day rule on its own, that breaks the rule that Home never does its own calculations.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Gap	When two cards have the same tier (for example two blue Action cards), which one comes first? The page says each card type has a fixed rank "recorded in the catalogue", but the catalogue tables don't have a rank column. Can you give the rank order?	(Home: Epic C — Presentation, ordering & limits): "Within a tier, order by **cost of delay**, defined as a fixed per-condition rank recorded in the catalogue above, not by recency and not by count." No rank appears in tables C1 to C5. [OI-5]	A) Within each tier, use the catalogue ID order (C-01 before C-02, and so on). B) The requirement owner supplies a rank list for each tier, for example Blocking: C-03, C-04, C-12, C-11, C-09, C-22. Suggested: B, added to the catalogue as a "Rank" column.	Home shows at most five cards, so the rank decides which cards get hidden under "n more". Without a list, engineers will make up the order.
Q-4	P1	Gap	Which edits, on which screens, should appear in "Recently worked on"? (That is Home's list of the rep's own recent edits, with links back.) The page says each screen must choose to take part, but it doesn't list the screens or the edits.	(Home: Epic D — What qualifies): "A write against a **resumable surface** — one with a stable deep link". (Home: Dependencies & Technical Constraints): "The write path must be **explicitly opt-in per surface**, not a blanket hook on every mutation".	A) A fixed list for version 1. For example: product edits (details, pricing, artwork), bulk pricing, adding or importing players, Roster Bank commits, division and team edits, and saves on each Settings card. Each comes with its label, e.g. "Home Jersey — pricing". B) My Team(s) edits only in version 1, because that is where testers got lost. Suggested: A. The owner confirms the list.	Engineering can't build or estimate the trail. Each tab's team has to add the recording to its own screens, so they all need the list.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P1	Gap	Several card buttons lead to filtered views that the owning tab's page doesn't describe yet. Who adds these views, and must they be ready when Home launches? Missing today: C-05 and C-15 go to a "store-wide player view, filtered to incomplete", but My Team(s) only has player lists per team. C-10 needs a "still generating images" filter, but the Products catalog only has a Category filter. C-20 needs an Orders filter for unpaid orders.	(Home: Dependencies & Technical Constraints): "Where a route needs a filter Home cannot express — C-05's incomplete-player view, C-10's render-pending filter, C-23's exempted-item filter — that filter must be added to the owning tab… **Audit which of those filters exist today and which are new work before estimating.**" (Roster Management: Epic 5) only describes "a **store-wide view** from the My Team(s) home, showing all pending captures". (Products Tab: Epic D): "a search field… and a **Category** filter". Note: the C-23 filter already exists ((Store Settings: Epic A4) "Link into the Products tab filtered to those items"). [OI-32]	A) Add the missing views to Roster Management, Products Tab and Order Management before Home is built. B) Launch Home with those buttons opening the tab without a filter, and add filters later. C) Leave those cards out until the views exist. Suggested: A for the C-05 player view, B for the others.	The page calls this "the most likely source of hidden scope". Estimates and the release plan are unreliable until it's decided.
Q-6	P2	Conflict	On a Draft store (not launched yet, so no shoppers), should cards C-04, C-09, C-11 and C-12 still show as Blocking (red, with a dot on the tab)? The Blocking tier means "someone outside the workspace is already affected", and that can't be true before launch.	(Home: Governing rule 2 — Severity tiers): "**Blocking** — Buyers, orders, or fulfillment are stopped right now. Someone outside the workspace is already affected." and "**Tier is fixed per condition, not per store.**" vs (Home: Epic C — Which cards populate the list): Draft can hold "C-04, C-08, C-09, C-16 — plus catalog conditions C-10 to C-13"; C-09 is "**Blocking**… *(Draft only)*".	A) Keep them Blocking in Draft, and reword the Blocking definition to also cover "stops the store from launching". B) Make the tier depend on store state (this breaks the "tier is fixed" rule). C) Keep C-09 Blocking, because it blocks launch. Show C-04, C-11 and C-12 as Action until launch. Suggested: A.	Every new Draft store could show red cards that don't match the written definition. Or engineers build tiers that change with store state, which the page says must never happen.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-7	P2	Gap	Should team managers get their own version of Home? (Team managers are coaches invited to a separate, smaller "Team Manager Portal".) The page leaves this open and recommends "no" for this version. Other pages also say team managers sign into the workspace itself, not a separate portal. If so, would they see Home?	(Home: User persona & use cases): "**OPEN — to be confirmed**… whether the **Team Manager Portal** gains an equivalent surface… Recommendation: **no, this version.**… Confirm before build." Related: (Store Status & Lifecycle: Store Close Report) "A rep and an invited team-manager-role user each see the auto-trigger once" "when that user next opens the workspace". (Team Stores Platform Overview: Team Manager Access): team managers get "a permission inside the Team Stores workspace… signs into the workspace and sees a slimmed-down view". (Roster Management: The Solution) lists "team managers" as users of the My Team(s) tab. [OI-13, OI-31]	A) No, not in this version (recommended). B) Yes. Add a third portal area that only shows cards the manager is allowed to act on. Suggested: A.	Decides whether the card engine must filter cards by role. It also affects what a team manager sees when they enter after a store closes.
Q-8	P2	Conflict	Please confirm the tab order is **Home, My Team(s), Products, Orders, Reports, Settings**. The Tabbed Store Dashboard page still says there are exactly five tabs, in a different order. The Setup Guide's "tabs" card also lists the old five. Will both be updated?	(Home: Epic A): "six tabs in order: **Home**, **My Team(s)**, **Products**, **Orders**, **Reports**, **Settings**". vs (Tabbed Store Dashboard: Epic A): "**Products**, **Orders**, **My Team(s)**, **Reports**, and **Settings**" and "**The tab count is fixed at five**"; (Tabbed Store Dashboard: Epic B, card 2): "Products, Orders, My Team(s), Reports, Settings — one line each." Store Status & Lifecycle (Epic A) matches Home. [OI-17]	A) Use Home's order. Update Tabbed Store Dashboard Epic A and Setup Guide card 2 (adding a line for Home). B) Keep the old order and put Home first: Home, Products, Orders, My Team(s), Reports, Settings. Suggested: A.	The tab bar, Home's summary rail (which follows tab order) and the Setup Guide would each show a different order.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-9	P2	Gap	The page refers to "Appendix A" several times (changes other pages must make: 8b, 8d, 8e, 10, and the tab-bar change). Appendix A is referenced but not published anywhere: it's missing from the Confluence page itself and from the 2026-10-16 PDF export, both of which end at Dependencies. Can you write it, or confirm the full list of changes other pages need?	(Home: Epic A): "The Tabbed Store Dashboard shell must be amended — see Appendix A"; (Home: Epic F): "(Appendix A, 8b)" and "See Appendix A, amendment 8e"; (Home: Epic G): "(Appendix A, 8d)"; (Home: Epic I — Product vocabulary): "(Appendix A, 10)". Also, Epic I calls Launch & Status Controls "stale" for using "Active", but that page now says "the live state was previously named Active; Open and Closed are the names used throughout". [OI-2, OI-19]	A) Write and publish Appendix A on the Store Home page. B) Confirm that the changes raised in this question list are the full set.	Other teams don't know which of their pages must change before Home ships, and Home "must not ship ahead of" item 8e.
Q-10	P2	Ambiguous	Should blue Action cards put a dot on their tab's label? The page says Blocking cards do and Informational cards don't, but says nothing about Action cards. Also, which tab gets the dot for C-03 (an orders problem that is fixed in Settings) and for C-16 (which links to the Launch button, not a tab)?	(Home: Epic A — Attention badges on tab labels): "**Blocking-tier conditions produce the dot; Informational-tier conditions do not.**"; (Home: Dependencies & Technical Constraints): "Tab-label indicators need the resolver's per-tab roll-up, restricted to Blocking-tier conditions". [OI-4]	A) Blocking only. The dot goes on the tab the button opens, so C-03 puts it on Settings and C-16 puts it nowhere. B) Blocking and Action both add dots. Suggested: A.	The dot rules will be built differently by design and engineering.
Q-11	P2	Conflict	How should card C-17 ("Your close report is ready") work? The Close Report already pops up on the first visit after a store closes, and closing that pop-up in any way marks it as seen. So C-17 would almost never be visible. Showing it also means Home reads the Close Report's "seen" flag, which Epic B says Home never does.	(Home: Epic C — C4 Lifecycle & schedule) C-17 trigger: "Store is Closed and this user has not seen the report for this close event". vs (Home: Epic B): "Home reads neither flag and writes neither." (Store Status & Lifecycle: Store Close Report): "Any dismissal marks the report as seen for that user." [OI-29]	A) Remove C-17. The pop-up already covers it, and Epic B already gives Closed stores a link to the Close Report. B) Keep C-17 and allow Home to read the seen flag (change Epic B). Suggested: A.	Either a card that never appears, or a break in Home's own rules.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-12	P2	Gap	When one card covers several records, where does its button go? Some routes point at a single record. Examples: C-11 "Images failed for *n* products" opens "the affected product's detail page". C-12 opens "the bundle's detail page". C-13 opens "the product's detail page". C-02 names one division and scrolls to "that group".	(Home: Epic C — C1 Orders) C-02: "Orders → Pending Orders, scrolled to that group"; (Home: Epic C — C3 Products) C-11: "Products → the affected product's detail page"; C-12: "Products → the bundle's detail page → Members"; C-13: "Products → the product's detail page → Application Sizing"; (Home: Epic C — Presentation): "**One card per condition, not per record.**"	A) With one record, open that record. With more than one, open the list filtered to the affected records (this needs the filters in Q-5). B) Always open the oldest affected record. Suggested: A.	Button behaviour is undefined in the common case of more than one record.
Q-13	P2	Ambiguous	Does card C-03 (orders can't ship because a manager is missing) apply to Individual Team stores, and to stores that deliver straight to homes? The screen it opens (manager mapping in Distribution & Fulfillment) only exists for League stores that ship to the team manager.	(Home: Epic C — C1 Orders) C-03 resolves to: "Settings → **Distribution & Fulfillment**, with the affected division auto-opened". C-08 is limited to "*(League, Ship-to-Manager only)*" but C-03 isn't. (Store Settings: Epic A3): "**Order Fulfillment Mapping.** Shown only for **League stores** whose fulfillment method is **Ship to Team Manager**." (Order Management: Epic B): "Single-Team stores get a single container." (Home: Epic C — store variant table) excludes only C-07 and C-08 on Individual Team stores. [OI-14]	A) C-03 only for League stores shipping to the team manager, the same as C-08. On single-team stores, C-04 covers the missing-address case. B) C-03 on every store. On single-team stores it opens the manager card in Settings → General. Suggested: A.	The card could appear on stores where the button leads nowhere useful.
Q-14	P2	Gap	Orders are also blocked when a manager is assigned but has no address. Should card C-03 cover that case too?	(Store Settings: Epic A3): "incomplete manager assignments — or a missing destination address on an assigned manager — block pending-order submission". vs (Home: Epic C — C1 Orders) C-03 trigger: "≥1 pending group whose group or team manager is unassigned". [OI-25]	A) Extend C-03 to "no manager assigned, or the assigned manager has no address". B) Add a new card with the next free ID (C-28). C) Out of scope. Suggested: A.	Orders could be stuck with no card on Home, which is the exact problem Home is meant to catch.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-15	P2	Conflict	For card C-07 ("*n* teams carry no products"), do products sold to the whole league count? Those are products not assigned to any team. The Products page says they are available to every shopper, so a team with no products of its own still has things to buy.	(Home: Epic C — C2 My Team(s)) C-07 trigger: "≥1 team with zero assigned products, direct or via division"; (Home: Epic I) C-07 detail line: "there's nothing to buy for these teams yet". vs (Products Tab: Epic L): "an unassigned item is league-wide… available to all shoppers with no code".	A) Count league-wide products. No card if any visible league-wide product exists. B) Count only team and division assignments (this matches the amber "No products yet" on the My Team(s) canvas), and reword the detail line so it doesn't say "nothing to buy". Suggested: B.	The card could tell the rep something untrue. On leagues that sell mostly league-wide gear, it could also stay on screen permanently.
Q-16	P2	Ambiguous	How does the system know a product's sizing is "unconfirmed" for card C-13 ("Confirm sizing for *n* products")? The Products page has no field that marks each decoration row as confirmed or not. Sizing is confirmed when a product is added, and the size defaults to "As Shown".	(Home: Epic C — C3 Products) C-13 trigger: "≥1 product whose application-sizing confirmation state is incomplete (Products Tab, Epic F)"; clears when "Sizing is confirmed on every row". vs (Products Tab: Epic F): "Select Size defaults to As Shown"; the summary rail reports "whether sizing is fully confirmed"; (Products Tab: Epic A): each staged item "confirms application sizing" at add time. [OI-35]	A) Add a "confirmed" flag per decoration row to Products Tab Epic F. Rows still on the "As Shown" default count as unconfirmed. B) Remove C-13, because sizing is always confirmed at add time. Suggested: A if unconfirmed sizing can really reach the factory, otherwise B.	The C-13 query can't be written, and Home isn't allowed to invent its own rule.
Q-17	P2	Conflict	Is card C-27 (products whose category was deleted) part of this release? It assumes deleted categories leave products "orphaned" (without a category). The Products page still lists that rule as an unresolved conflict, and if the other option wins, the situation can never happen.	(Home: Dependencies & Technical Constraints): "**C-27 depends on an amendment to Products Tab that must land first.**" (Products Tab: Governing rule 2): "**OPEN — conflict (b)**… The orphaned state below is specified **on the assumption that warn-and-orphan wins**; if the reassignment prompt is retained instead, the orphaned state becomes unreachable". (Product Categories: Epic E): "**OPEN** — whether a product may be left uncategorized *by choice*". [OI-40]	A) Warn-and-orphan wins, and C-27 ships with Home. B) The reassignment prompt wins, and C-27 is removed. C) Ship Home first and add C-27 once the conflict is settled. Suggested: A.	A card with no settled rule behind it, which Governing rule 1 forbids.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-18	P2	Gap	Card C-19 (some days have no team able to order) clears when the gap is "closed or accepted". But the Order Window Scheduler has no way to accept a gap. Should Settings get an "accept this gap" action, or should the card only clear when the gap is closed?	(Home: Epic C — C4 Lifecycle & schedule) C-19 clears when: "Gap is closed or accepted"; (Home: Epic C — Presentation): "the acceptance is expressed in the owning surface — closing a coverage gap". vs (Store Settings: Epic E): "**coverage-gap detection** that flags days between sequential windows where no team is open" (no accept action). [OI-16]	A) The card clears only when the gap is closed. B) Add "Accept gap" to Store Settings Epic E, with Settings storing that choice. Suggested: B if planned gaps (holidays, breaks) are common, otherwise A.	Reps with planned gaps would see the card for the whole season.
Q-19	P2	Gap	What does "unsettled payment / open PO" mean for card C-20, and where is it recorded? (A PO is a purchase order number used to pay for submitted orders.) The Orders page only asks for a PO number at submission and never defines a paid or unpaid status. Should C-20 only show on Closed stores?	(Home: Epic C — C4 Lifecycle & schedule) C-20: "Closed with unsettled payment… ≥1 order in the window with an open PO… PO settles". (Order Management: Epic B): the rep "enters payment as a **PO Number**". (Store Status & Lifecycle: Edge cases): "Closed with unsettled payment (open PO) — Affected orders are flagged". [OI-15, OI-27]	A) Add a PO payment status (open or settled) to Order Management. C-20 reads it and shows on Closed stores only. B) Remove C-20 until that status exists. Suggested: A if finance tracks PO payment, otherwise B.	The card can't be built, because nothing records whether a PO is settled.
Q-20	P2	Conflict	For cards C-21 and C-22 (managers left over from the team you switched away from), how does the system remember that the rep chose to **keep** them? Today the keep-or-remove choice is a one-time prompt in the Change Team flow, and nothing stores a "kept" decision. As written, these cards would never clear for kept managers.	(Home: Epic C — C5 Settings & access) C-21 clears when: "Records are kept or removed"; C-22: "Access is revoked, or the record is confirmed kept". (Home: Governing rule 1): "**No new state.**" vs (Store Settings: Epic A1): "the modal lists any existing manager records **imported from the previously connected team** and asks whether they should be kept or removed. It is a prompt".	A) Settings stores a "kept" choice on the manager record and offers keep/remove on the manager card. Home reads that choice. B) C-21 and C-22 show only if the rep closed the prompt without choosing. Suggested: A.	Either the cards stay on screen forever, or engineers invent new stored data that Home isn't allowed to own.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-21	P2	Conflict	Please confirm which cards can appear in each store state. The table leaves cards out and contradicts itself. Draft omits C-07, C-21 to C-24 and C-27, which can all be true before launch. Closed lists only C-14 as impossible, but C-15 (which needs C-14) and C-09 and C-16 (Draft only) can't happen either. And the page says "24 registered conditions" while 25 are active (C-01 to C-24 plus C-27).	(Home: Epic C — Which cards populate the list): "**Draft** — C-04, C-08, C-09, C-16 — plus catalog conditions C-10 to C-13"; "**Closed** — … — C-14 (no live window to be closing)"; "which of the 24 registered conditions can hold". (Store Status & Lifecycle: Behavior Matrix) Draft ordering window: "Configurable but not running". [OI-7, OI-8]	A) Each card's own trigger decides, and the table is only a guide. B) The owner corrects the table. Suggested fix: Draft adds C-07, C-21, C-22, C-23, C-24, C-27 and excludes C-19. Closed excludes C-09, C-14, C-15, C-16. Count is 25. Suggested: both A and B.	The page says the engine must filter by store state, so a wrong table means cards are wrongly hidden or shown.
Q-22	P2	Gap	Is the new label **"Point of Contact"** (replacing "primary" for the main manager) approved for Settings and for Step 1 of store creation as well? Home may not ship before Settings changes, and Step 1 also labels that row "primary".	(Home: Epic F): "**Settings must adopt the same term, and Home must not ship ahead of it.** Settings currently marks the record *primary*." (Store Settings: Epic A): "with the **primary** record marked". (Step 1 — Basics: Epic E): "The primary row is labelled as such in the UI". [OI-20]	A) Yes. Rename in Settings and Step 1 in the same release as Home. B) Keep "primary" everywhere, and Home follows. Suggested: A.	Home is blocked until Settings changes. Otherwise reps see two names for one thing.
Q-23	P2	Conflict	Where can a rep change which manager is the main contact after the store is created? Home says this is not done in the manager edit window. Settings describes it as part of the manager card ("designates it primary"). If it's in that window, Home's "same window" rule would bring the control onto Home.	(Home: Epic F — Designating the point of contact): "**The designation is not set in the manager edit modal.** It is set in **Step 1 — Basics**… and in **Settings → General**." vs (Store Settings: Epic A2c): "**Changing the primary:** Given a non-primary record, when the rep designates it primary… The modal states this before saving"; (Store Settings: Scenarios): "adding a second coach to the manager list after setup, or promoting one to primary". [OI-21]	A) It's in the manager card's window in Settings. Home opens the same window, but the main-contact control is hidden when opened from Home. B) It's somewhere else in Settings → General (say where), and the manager window never has it. Suggested: A, and the owner states the exact place.	Home might expose a buyer-visible change that it says it won't host. Or the Home and Settings windows drift apart.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-24	P2	Conflict	Will the Settings manager card get an "Add from Team Database" action? Home relies on it: Home has no import button and sends reps to Settings → General to import a coach. But Settings still lists this as an open question.	(Home: Epic F): "Home carries **Add manager** only, and a rep who wants to pull an existing coach record is routed to Settings → General" and "Settings Epic A1's standing open question closes as *yes*… (Appendix A, 8b)". vs (Store Settings: Epic A1): "**OPEN — to be confirmed:** whether this re-fetch should be surfaced on the **League/Team Manager Information card**… Recommend yes; confirm the surface before build." [OI-22]	A) Yes. Add "Add from Team Database" to the Settings manager card and close the Settings open question. B) No. Coach import stays inside Edit Store Details → Team Branding & Sport, and Home's link goes there. Suggested: A.	Home's link may lead somewhere with no import option.
Q-25	P2	Ambiguous	When the rep edits the team logo or colours from Home, what opens? In Settings, those controls sit inside the "Edit Store Details" window along with Change Team, tax, fundraising and the point-of-contact selector, and Home says it won't host any of those.	(Home: Epic G): Team Logo and Team Colors "**Rendered, editable via the existing component**" and "Home does **not** host **Change Team**"; (Home: Epic F): "Home does **not** surface the Store Point of Contact mode selector. That lives in the Edit Store Details modal". (Store Settings: Epic A): "The modal edits Store Name, Team Name, **Team Branding & Sport** (connect-to-team component with coach import, Team Logo drop zone, Team Colors, Sports multi-select)… **Compliance & Taxation**… and the **Store Point of Contact**."	A) Pull out a small "Team Logo & Colours" editor that both Settings and Home use (Settings page updated). B) Home's Edit opens the full Edit Store Details window. C) Home shows the logo and colours read-only and links to Settings → General. Suggested: A.	Unclear what to build. B breaks Home's own "never host Change Team" rule.
Q-26	P2	Conflict	Please confirm that Team Logo and Team Colors can still be edited after a store launches. The Settings page still lists what locks after launch as "to be decided", including changing the team.	(Home: Epic G — Availability): "**Team Logo and Team Colors do not lock after launch either** — decided, and to be recorded in Settings Epic B's lock list (Appendix A, 8d)". vs (Store Settings: Epic B): "the exact fields/inputs that lock after launch are *TBD*"; "Whether **re-binding the store to a different team** should be permitted after launch is part of the TBD lock list". [OI-23]	A) Confirmed editable after launch. Record this in Store Settings Epic B. B) They lock after launch, and Home shows them read-only on live stores. Suggested: A.	Home and Settings could disagree about whether a live store's logo can change.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-27	P3	Conflict	What is the "recent edits" section called? The summary at the top calls it "Pick up where you left off", but Epic D says the name is "Recently worked on".	(Home: Executive Summary — The Solution): "**Pick up where you left off** is a per-rep, per-store list" and "answered by **Pick up where you left off**". vs (Home: Epic D — What it is): "**The section is named "Recently worked on", not "Pick up where you left off".**" [OI-1]	A) "Recently worked on" everywhere. Update the summary and user stories. B) "Pick up where you left off". Suggested: A.	The section heading and the other pages that mention it won't match.
Q-28	P3	Ambiguous	Is the "onboarding tour" that Step 3 starts after a rep's first store the same thing as the Store Setup Guide? Home says only two pop-up sequences run on first entry (Setup Guide and Close Report).	(Step 3 — Review & Deploy): deploying "lands the user in its management dashboard with a success toast, and triggers the onboarding tour for a first-ever store". vs (Home: Epic B): "Two paced card sequences already trigger on 'first workspace entry': the **Store Setup Guide**… and the **Store Close Report**".	A) Same thing. Update Step 3 to say "Store Setup Guide". B) A separate tour. Then the order between the tour, the Setup Guide and Home must be stated. Suggested: A.	A third pop-up could appear on top of Home in an undefined order.
Q-29	P3	Gap	Where is the Close Report link on the Reports tab? Home sends reps there (card C-17, and the Close Report link for Closed and Archived stores), but the Reports tab page doesn't list a Close Report entry.	(Home: Epic C — C4) C-17 resolves to "Reports → Store Close Report"; (Home: Epic B): "Given a Closed or Archived store, then Home surfaces a route to the Close Report." vs (Store Analytics (Reports Tab): Epic A) lists only the KPI cards, the Team Revenue chart and the Fundraising Report. (Store Status & Lifecycle): "A **Store Close Report** entry sits at the top of the Reports tab"; (Store Settings: Epic H): reachable "from the **Store Status card**". [OI-30]	A) Add the Close Report entry to the Reports Tab page, as Store Status & Lifecycle describes, and Home links there. B) Home links to the Store Status card in Settings → Schedule & Status. Suggested: A.	Home's link has no defined destination on the Reports tab.
Q-30	P3	Conflict	The Orders page says pending orders are "not yet approved by the rep". Home says there is no approval step and bans the word "approve". Should the Orders page be corrected to "not yet submitted"?	(Order Management: Epic A): "orders that have been **placed in the storefront but not yet approved by the rep and sent to the factory**". vs (Home: Epic C — C1 Orders): "**not** 'approve n orders'. There is no approval step in the product". [OI-26]	A) Yes, Order Management says "submitted". B) An approval step does exist, so Home's wording changes. Suggested: A.	Reps may see "approve" on one screen and "submit" on another.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-31	P3	Conflict	What should card C-05's second line show? (C-05 = players who haven't ordered required gear.) One rule says it must show the age of the oldest case ("Oldest placed 3 days ago"). The copy table shows the window close date instead, and stores with no ordering window have no close date.	(Home: Epic C — Presentation, ordering & limits): "'*Oldest placed 3 days ago*' is required on C-01, C-05, and C-06". vs (Home: Epic I — Rep-facing headlines) C-05 detail: "Window closes *date* — *n* of them have no email or phone, so a reminder won't reach them". (Home: Epic C — store variant): Always-on stores have "no configured ordering window". [OI-6]	A) No age for C-05. Show "Window closes *date*" only when the store has a window, and always show the no-contact warning. B) Show the oldest age instead of the close date. Suggested: A.	Copy and rules disagree, and the line breaks on always-on stores.
Q-32	P3	Ambiguous	Card C-07 lists two destinations ("canvas, or the division's per-team coverage table"), but every card may have only one button. Which one should the button open? And should the headline use the canvas wording "No products yet", since the page says C-07 "must use the same language"?	(Home: Epic C — C2 My Team(s)) C-07 resolves to: "My Team(s) → canvas, or the division's per-team coverage table". vs (Home: Epic C — Presentation): "**Every card carries exactly one primary action.**" (Home: Epic C — C2) "C-07 mirrors the amber gap state, and must use the same language" vs (Home: Epic I) headline "*n* teams carry no products". [OI-34]	A) If all affected teams are in one division, open that division's coverage table. Otherwise open the canvas. B) Always open the canvas. For wording: keep "*n* teams carry no products" (a count headline) and use "No products yet" only as the detail line. Suggested: A for both.	The button's behaviour is undefined.
Q-33	P3	Ambiguous	Should card C-10 ("*n* products are still generating images") count every product whose images are being made, even hidden ones and ones that will be ready in a minute? Or only products the rep has switched to visible that are being held back?	(Home: Epic C — C3 Products) C-10 trigger: "≥1 decorated product in **Render pending** whose renders have not landed"; note: "A render-pending item is in a normal transient state that resolves itself". (Products Tab: Epic H): "a decorated product cannot be made **visible** until its render set exists; render-pending items are held".	A) Only products the rep wants visible that are held by image generation. B) All render-pending products. C) Only after a waiting time (say 15 minutes). Suggested: A.	Cards that flash on and off after every artwork save, and a count that doesn't match "Customers can't see them".

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-34	P3	Ambiguous	Do the "Retry" button on card C-11 and the "Launch store" button on card C-16 do the action from Home, or just open the place where the rep does it (the product page, or the Launch button in the header)? Home is not supposed to change anything itself.	(Home: Epic I — Rep-facing headlines) C-11 button: "Retry"; C-16 button: "Launch store". vs (Home: Epic C — C3 Products) C-11 resolves to "Products → the affected product's detail page"; C-16 resolves to "Workspace header → Launch control"; (Home: Governing rule 1): "Home never blocks, never gates" and Home is "a second doorway, not a second implementation". [OI-10]	A) Both only open the owning control. C-11's button is renamed "Fix images". "Launch store" opens the normal launch confirmation, so nothing launches without it. B) Both act directly from Home (an exception to Home's rules). Suggested: A.	The button label promises something the routing doesn't do.
Q-35	P3	Ambiguous	Is card C-11 (images failed) always Blocking? When a product that is already visible is re-decorated and the new images fail, the old images stay live and shoppers can still buy it.	(Home: Epic C — C3 Products): "**C-11 is Blocking and C-10 is not.**… the item can never become visible until it does". vs (Products Tab: Epic H): on re-decoration of a visible product, "the previous set stays live". [OI-36]	A) Blocking only when the product has never had images (first decoration). A failed re-decoration is a separate Action card or not shown. B) Always Blocking. Suggested: A, registered as two conditions as Governing rule 2 requires.	Red cards and tab dots when no shopper is affected.
Q-36	P3	Ambiguous	May card C-12 use the word "Incomplete" for bundles? Home asked whether reps see that word, and they do: the Products catalog card shows it.	(Home: Epic I) "**Verify** whether reps see that state label on the Products tab — if they do, the card may use it". (Products Tab: Epic D): the bundle card "shows **'Incomplete — needs a second item'** in place of its price range". [OI-33]	A) Yes. Use the same label, e.g. "*n* bundles are Incomplete". B) Keep the current copy, "*n* bundles have only one item left". Suggested: A, following Home's own "same label" rule.	Small copy mismatch between Home and Products.
Q-37	P3	Conflict	Card C-27's copy says shoppers "can't filter or search for" products whose category was deleted. The Products and Product Categories pages say shoppers can still find them by searching the name, and only lose filtering and search by category. Should the copy be corrected?	(Home: Epic I) C-27 detail: "shoppers can still buy them, but can't filter or search for them". vs (Products Tab: Governing rule 2): "excluded from category filtering and category search. Shoppers can still reach it by direct link, by search on name"; (Product Categories: Epic D): "stop being filterable or searchable by category".	A) Change to "shoppers can still buy them, but can't find them by category". B) Keep as is. Suggested: A.	Reps would be told something untrue about their store.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-38	P3	Ambiguous	When teams in a store have different ordering windows (set per team in the Order Window Scheduler), which close date drives cards C-14 and C-15? Also, is day 7 itself "urgent"? One page says "inside the final 7 days" and another says "fewer than 7 days".	(Home: Epic C — C4 Lifecycle & schedule) C-14 trigger: "Store is Open, has a set window, and the days-left pill is in its urgent range". (Store Settings: Epic E): "schedule at **store level** or **per team code** — … with start/end/timezone per row". (Active Ordering Windows Monitor): "fewer than 7 days". [OI-37]	A) The store-level window only. B) The earliest close date of any team still open. Suggested: A, unless reps commonly run staggered closes. For the boundary: use whatever the Settings pill uses, and fix the Monitor page to match.	The card may give the wrong date on per-team schedules.
Q-39	P3	Conflict	When does card C-18 ("*n* orders are still being made") appear and clear? It starts when orders are "not yet shipped" but clears only when they're "Delivered". Should it also count pending orders that haven't been submitted yet, which already show on C-01?	(Home: Epic C — C4 Lifecycle & schedule) C-18 trigger: "Store is Closed with ≥1 order not yet shipped"; clears when: "Every order reaches Delivered or is cancelled". Epic I copy: "They'll ship as they're finished". [OI-28]	A) Starts when a submitted order isn't shipped yet, and clears when every submitted order has shipped or been cancelled. Pending orders are excluded. B) Starts when not delivered, and clears when delivered. Suggested: A.	The card stays after everything has shipped, and it double-counts C-01's orders.
Q-40	P3	Gap	Which page owns the 7-day limit for card C-24 (invited managers who haven't signed in)? Home sets it, but Home's own rules say triggers must use the owning page's states, never a number Home invents.	(Home: Epic C — C5 Settings & access): "**C-24's threshold is 7 days.**" vs (Home: Epic C — Reading the table): "*Trigger*… expressed against the owning spec's own state, never against a figure Home computes". (Store Settings: Epic A2b) defines only "**Invited · not logged in**" with no time limit. [OI-11]	A) Add "not signed in after 7 days" to Store Settings Epic A2b, and Home reads it. B) Keep it on Home as a documented exception. Suggested: A.	A small break of Home's no-own-calculation rule. The limit could drift from Settings.
Q-41	P3	Conflict	Which label should a manager row on Home use for invite status? Settings uses "Active" and "Invited · not logged in". Home's manager panel uses "Portal access active" and "Invited, not signed in". Card C-24's copy also says "haven't signed in yet".	(Home: Epic F): the row states "'*Portal access active*' or '*Invited, not signed in*'"; (Home: Epic C — C5) C-24 trigger: "**Invited · not logged in**". vs (Store Settings: Epic A2b): "Status is either **Active**… or **Invited · not logged in**". (Home: Governing rule 1): "**No new vocabulary.**" [OI-9, OI-24]	A) Use the Settings labels on Home ("Active", "Invited · not logged in"). B) Change Settings to Home's wording. Suggested: A.	Reps see two names for the same status.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-42	P3	Gap	Please provide the text for the "Recently worked on" rows, the empty "Needs your attention" message, and the archived-store message. Epic D says this copy is in Epic I, but Epic I only covers the cards.	(Home: Epic D — Presentation): "its action is a **return**, not a resume — *'Open'*, *'Go to Products'*. Copy is specified in Epic I." (Home: Epic C — Presentation): the empty state "states plainly that nothing needs the rep right now and names the store's current lifecycle state". Epic I has no rows for these.	A) The owner supplies the copy. B) Design drafts it using Epic I's rules, and the owner approves. Suggested: B.	Copy will be invented during the build.
Q-43	P3	Ambiguous	On Individual Team stores, is the tab labelled "My Team" (not "My Team(s)")? If so, should the first row of the summary rail say "My Team" on those stores?	(Home: Epic E): the navigation "still read **My Teams** / **My Team**" and "the first row reads My Team(s)". (Roster Management: Epic 0): "the My Team tab drops straight into the team's player table" on Single-Team stores.	A) The tab is always "My Team(s)", so the rail always says "My Team(s)". B) The tab is "My Team" on single-team stores, and the rail matches it. Suggested: whichever the tab really shows. The rail must match.	The rail label could differ from the tab label, which Home forbids.
Q-44	P3	Ambiguous	In the summary rail, does "24 orders" include the pending orders shown as "4 to submit"? The All Orders list on the Orders tab leaves pending orders out.	(Home: Epic E): "*'24 orders · 4 to submit'*" and "order counts follow the Orders tab's". vs (Order Management: Epic A): "Pending orders appear only in the Pending sub-tab."	A) 24 = All Orders count (pending not included). B) 24 = all orders including pending. Suggested: A, to match the Orders tab.	The rail figure might not match the tab, which the page says is a defect.
Q-45	P3	Ambiguous	What does the Reports row of the summary rail show, and where does "total raised" (fundraising) appear? The page says the Reports row is "a route, not a KPI strip" and that Home "may" show total raised, but doesn't say where. Is the "summary strip" in Epic A this same rail? And is it right that Settings has no row, given the rail is meant to be "a second route into each tab"?	(Home: Epic E): "**Reports row is a route, not a KPI strip.**"; "**What Home may show instead:** total raised during the window"; "Each row carries the tab's headline count". (Home: Epic A): "Home may *echo* header state in its summary strip". [OI-12, OI-39]	A) The Reports row shows total raised (no bar) as its headline figure. The "summary strip" is the rail. B) The Reports row shows only a link, and total raised isn't shown on Home. No Settings row in either case. Suggested: A.	The layout of one rail row is undefined.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-46	P3	Gap	Where should the link to the team artwork library go? Home says it links to the library, but no page or screen for the library is described anywhere yet.	(Home: Epic G): Team artwork library "**Linked, not reproduced**" and "Home links to it and says which scope it is". (Products Tab: Epic I) gives the library in one paragraph with no screen or route. Home itself says "Products Epic I is a short section without acceptance criteria". [OI-38]	A) Leave the link out until Products Epic I defines a library screen. B) Link to the Artwork Editor. Suggested: A.	A link with no destination.
