Clarification Questions — Store Home (Home Tab)

Sources: input/requirements/Team-Store-Confluence/Store Workspace/Store Home (Home Tab).md (Confluence, pulled 2026-10-26), cross-checked against the other 54 .md files in input/requirements/Team-Store-Confluence/ · Total: 48 (P1 3 · P2 21 · P3 24)

How to read this: card numbers such as C-03 are the cards in the Home tab's "Needs your attention" list. Each card has a colour group: Blocking (red, someone is already stopped), Action (blue, rep work is waiting) or Informational (grey, good to know). OI numbers point to open items in implementation-summary.md.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Gap	Home says several other specs must be changed, and points to "Appendix A" for the exact changes. Appendix A is referenced but not published anywhere. Who will publish these changes, and must Home wait for them before it is built?	OI-2. Store Home (Epic A — The Home tab & workspace navigation): "The Tabbed Store Dashboard shell must be amended — see Appendix A." Store Home (Epic F — Team Managers panel): "See Appendix A, amendment 8e." and " (Appendix A, 8b)". Store Home (Epic G — Brand assets panel): "to be recorded in Settings Epic B's lock list (Appendix A, 8d)". Store Home (Epic I — Product vocabulary): "The workspace header's chip should be corrected on the same pass (Appendix A, 10)."	A) Publish Appendix A on the Home page before build, listing every change (tab count, 8b, 8d, 8e, 10 and any others). B) Make each change directly in the other specs and remove the Appendix A references from Home. C) Build Home now and treat the changes as later work. Suggested: B.	Teams working on the tab bar, Settings and the workspace header won't know what to change. Home's own rule that it "must not ship ahead" of the Settings change can't be checked. The numbering (8b, 8d, 8e, 10) suggests other changes exist that nobody can see.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-2	P1	Gap	Several cards send the rep to a filtered list that doesn't exist yet in the tab that owns it. Who designs and builds these lists, and are they part of the Home project? Examples: C-05 and C-15 (the "players haven't ordered their required gear" cards) open a store-wide list of players who are missing gear, but My Team(s) only has a player table per team. C-10 (the "products are still generating images" card) needs a matching filter, but the Products catalog only has search and a Category filter. C-23 (the "fundraising is off, but some products still add to it" card) needs one too.	OI-15. Store Home (Epic C — C1 Orders): C-05 goes to "My Team(s) → store-wide player view, filtered to incomplete". Store Home (Dependencies & Technical Constraints): "Where a route needs a filter Home cannot express — C-05's incomplete-player view, C-10's render-pending filter, C-23's exempted-item filter — that filter must be added to the owning tab as an addressable state" and "Audit which of those filters exist today and which are new work before estimating." vs Products Tab (Epic D — The catalog page): "Controls: a search field" … "and a Category filter." Roster Management (Epic 5): the only store-wide list is the Roster Bank, "showing all pending captures with a team column and filters".	A) Add each missing list to its owning spec (My Team(s), Products, Settings or Orders) as part of the Home project. B) Ship those cards pointing at the nearest existing page (for example the My Team(s) main view) until the filtered lists exist. C) Hold those cards back until the lists exist. Suggested: A, with an agreed list before estimating.	The spec itself calls this "the most likely source of hidden scope". Without an answer, estimates will be wrong and cards may send the rep to a page that doesn't show the problem.
Q-3	P1	Conflict	What must be true before a Draft (not yet launched) store can launch: at least one product added, even if hidden, or at least one product that shoppers can see? Home's C-09 ("Add a product before you launch") and C-16 ("Your store is ready to launch") follow the "can see" rule, but two other specs say "added".	OI-3. Store Home (Epic C — C3 Products): C-09 trigger "Catalog holds zero visible products"; Store Home (C4 — Lifecycle & schedule): C-16 trigger "Store is Draft and ≥1 visible product exists". Products Tab (Base flow): "Launch Store is disabled until the catalog contains at least one visible product." vs Launch & Status Controls (Acceptance Criteria): "the gate is products added, not published" and Store Status & Lifecycle (Store Definitions): "cannot be launched until at least one product has been added".	A) At least one visible product (matches Products Tab, Home and the Setup Guide). B) Any added product, visible or hidden. Suggested: A, and update Launch & Status Controls and Store Status & Lifecycle to match.	With only hidden products, Home would show the red "Add a product before you launch" card while the Launch button is enabled (or the reverse), and C-16 would never appear. Home isn't allowed to work this out itself, so the owning rule must be settled first.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-4	P2	Conflict	When an invited team manager signs in, are they inside the store workspace (where they might see the Home tab) or in a separate portal? And should team managers get any Home-style page in this version?	OI-26. Store Home (User persona & use cases): "That portal is not the store workspace and does not render the six-tab navigation at all" and "Recommendation: no, this version. … Confirm before build." vs Team Stores Platform Overview (Team Manager Access): "Access is granted as a permission inside the Team Stores workspace, not as a standalone portal on the storefront." Store Status & Lifecycle (Store Close Report — Trigger & presentation): "A rep and an invited team-manager-role user each see the auto-trigger once for the same close event."	A) Team managers never see Home in this version (the spec's recommendation). B) Team managers see Home, showing only cards they are allowed to act on. C) The team-manager view gets its own Home-like area later. Suggested: A.	Decides permissions and what a team manager lands on. If team managers do see Home, they would see cards for actions they aren't allowed to take.
Q-5	P2	Conflict	Which tab order is correct? The tab-bar spec fixes the workspace at five tabs: Products, Orders, My Team(s), Reports, Settings. Home adds a sixth tab and also moves My Team(s) ahead of Products.	OI-1. Store Home (Epic A): "it presents six tabs in order: Home, My Team(s), Products, Orders, Reports, Settings." Store Status & Lifecycle (correction note) agrees: "The workspace tabs are Home, My Team(s), Products, Orders, Reports, Settings". vs Tabbed Store Dashboard (Epic A — Tabbed workspace): "The tab count is fixed at five" and "the store tabs are available: Products, Orders, My Team(s), Reports, and Settings."	A) Home's order (Home, My Team(s), Products, Orders, Reports, Settings); update Tabbed Store Dashboard. B) Keep today's order and add Home first (Home, Products, Orders, My Team(s), Reports, Settings). Suggested: A.	The tab bar can't be built, and the "In your store" summary follows "navigation order", so its rows would change too.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-6	P2	Ambiguous	Home's rule is that a card must not show on a well-run store. But on a normal open store, C-01 (pending orders waiting to be submitted), C-02 (a group under the minimum to ship) and C-05 (players who haven't ordered required gear) are true almost all the time, because reps hold orders on purpose until they reach the factory minimum. Should these cards show whenever the condition is true, or only after a wait or near the deadline?	Store Home (Epic C — Presentation, ordering & limits): "A condition must be false on a well-run store. Before registering anything, check whether it would hold in the common case." Store Home (C1): C-01 trigger "≥1 order in the storefront → pending state, not yet submitted to the factory". vs Order Management (Epic B): "reps deliberately let orders pile up until they hit MOQ to avoid large below-minimum fees."	A) Show whenever true, and accept they are usually present. B) Show only after a set wait (for example, the oldest pending order is more than N days old). C) Show C-02 and C-05 only in the last days of the ordering window, as C-15 already does. Suggested: B for C-01, C for C-02 and C-05.	If these cards are almost always there, reps learn to ignore the list, which is the failure Home is designed to avoid. They would also fill most of the five visible slots.
Q-7	P2	Gap	On which store setups can C-03 (a division or team with orders waiting has no manager) and C-04 (no delivery address) appear? For example: an Individual Team store, a store using home delivery, or a League store where every division ships to its own manager.	Store Home (Epic C — store variant table): Individual Team stores: "C-07 and C-08 cannot hold — one team, no coverage or division-mapping question"; C-08 is limited to "(League, Ship-to-Manager only)" but C-03 has no such limit. vs Store Settings (Epic A3): the manager mapping is "Shown only for League stores whose fulfillment method is Ship to Team Manager." Step 1 — Basics (Epic F): "the destination captured here belongs to the league manager and serves as the default."	A) C-03 only on League stores shipping to team managers. C-04 only where the store-wide address is actually used (Individual Team stores, or the League default). B) Both on any store shipping to team managers. Suggested: A.	Cards could appear on stores where the rep can't fix them, or fail to appear where orders really are blocked.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-8	P2	Gap	If a manager is assigned to a division but has no delivery address, pending orders can't be submitted. Which card, if any, should warn the rep? Today C-03 only covers "no manager" and C-04 only covers the store-wide address.	OI-19. Store Settings (Epic A3 — Submission gate): "incomplete manager assignments — or a missing destination address on an assigned manager — block pending-order submission" vs Store Home (C1): C-03 trigger "≥1 pending group whose group or team manager is unassigned"; C-04 trigger "the destination address is empty".	A) Widen C-03 to include "assigned manager has no address". B) Add a new card with the next free number (C-28). C) Leave it off Home. Suggested: A.	The rep is blocked from sending orders with no warning. This is exactly the case Home's C-03/C-04 measures are meant to catch.
Q-9	P2	Gap	C-11 ("Images failed for n products") needs a "failed" status on products, but the Products spec only lists three artwork states and no "failed" one. Should Products add a "failed" state that Home can look up?	OI-20. Store Home (C3): C-11 trigger "≥1 product whose render generation failed (Products Tab, Epic H)". vs Products Tab (Epic H): "Decoration states: Not decorated → Render pending → Decorated." and "a render failure surfaces to the rep as a retryable error."	A) Add "Render failed" as a fourth artwork state in Products Tab Epic H. B) Treat "render pending for longer than N hours" as failed. Suggested: A.	C-11 has nothing to check, and Home isn't allowed to work it out itself.
Q-10	P2	Gap	What exactly makes a product's sizing count as "not confirmed" for C-13 (the "Confirm sizing for n products" card)? The Products spec gives each decoration row a size that starts at "As Shown", but never defines a confirmed or unconfirmed state.	Store Home (C3): C-13 trigger "≥1 product whose application-sizing confirmation state is incomplete (Products Tab, Epic F)" vs Products Tab (Epic F — Application sizing): "Select Size defaults to As Shown and is a dropdown per row." and "The summary rail reports the count of applications on file and whether sizing is fully confirmed."	A) Not confirmed = any row the rep has never saved, even if it shows "As Shown". B) Add an explicit "confirmed" tick per row to the Products spec. C) Sizing is confirmed when the product is added, so C-13 only flags rows added later. Suggested: B.	The card can't be built. If the default "As Shown" counts as not confirmed, C-13 would show on nearly every store.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-11	P2	Conflict	Should C-27 (the "products aren't in a category" card) be built now? The Products spec still says deleting a category makes the rep move its products first, so products would never be left without a category. The Product Categories spec says deletion is never blocked and products are left without one.	OI-30. Products Tab (Governing rule 2): "This spec says removing a category that contains products triggers a reassignment prompt so products are never orphaned." System Modals & Toasts (Modal inventory) still lists "Category removal with reassignment". vs Product Categories (Epic D): "Deletion is never blocked." Store Home (Dependencies): "C-27 depends on an amendment to Products Tab that must land first."	A) Deleting a category leaves products without one (Product Categories wins); build C-27. B) The move-first prompt wins; drop C-27. Suggested: A, and remove the old prompt from Products Tab and System Modals & Toasts.	C-27 may never appear, or may be built against a rule that's about to change.
Q-12	P2	Conflict	When should C-15 (window closing and players still haven't ordered) appear: at 7 days left or at 14 days left? The table says C-15 needs C-14's condition (the 7-day "urgent" state), but the notes say C-15 starts at 14 days. No other spec has a 14-day state, and Home isn't allowed to set its own limits.	OI-4, OI-31. Store Home (C4 — Lifecycle & schedule): C-15 trigger "C-14's trigger and C-05's trigger both hold" vs "C-14 matches the pill at 7 days. C-15 fires earlier, at 14 days". Store Home (Governing rule 1): "Every count, threshold, and condition on Home is read from the surface that owns it." Store Settings (Epic E): the days-left pill "turns urgent (red) inside the final 7 days".	A) 14 days, and add a 14-day "closing soon" state to the store schedule in Settings (Epic E) so Home can read it. B) 7 days, the same as C-14. Suggested: A.	The card can't be built as written, and either choice breaks one of Home's own rules until a spec changes.
Q-13	P2	Conflict	C-17 ("Your close report is ready") needs to know whether this user has already seen the Close Report, but Home is also told never to read that flag. And since the report opens by itself on the first visit after closing, and closing it in any way counts as "seen", when would C-17 ever appear?	OI-5. Store Home (C4): C-17 trigger "Store is Closed and this user has not seen the report for this close event" vs Store Home (Epic B): "Home reads neither flag and writes neither." Store Status & Lifecycle (Store Close Report — Trigger & presentation): "Any dismissal marks the report as seen for that user."	A) Drop C-17. The Close Report link that Home already shows on Closed stores (Epic B) covers it. B) Keep C-17 and allow Home to read the "seen" flag. C) Change the trigger, for example "Closed and the full report has never been opened". Suggested: A.	Either the card can never appear, or building it breaks Home's "reads neither flag" rule.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-14	P2	Gap	C-19 (some days have no team able to order) goes away when the gap is "closed or accepted". How does a rep "accept" a gap? The order-window scheduler in Settings has no accept action.	OI-16. Store Home (C4): C-19 clears when "Gap is closed or accepted". Store Home (Presentation, ordering & limits): "the acceptance is expressed in the owning surface — closing a coverage gap, submitting short, deleting the bundle." vs Store Settings (Epic E): the scheduler has "coverage-gap detection that flags days between sequential windows where no team is open" and no accept action.	A) Add an "accept this gap" action to the Order Window Scheduler in Settings, saved there. B) The card only goes away when the gap is closed. Suggested: A.	A rep with a deliberate gap (for example a holiday) would see the card forever, which teaches them to ignore the list.
Q-15	P2	Gap	C-20 (orders haven't been paid for) needs to know whether an order's payment is still open, and goes away when the purchase order (PO) "settles". No spec records whether a PO has been paid. Where does this status come from? Also, should C-20 appear only on Closed stores, as the state table suggests?	OI-17. Store Home (C4): C-20 trigger "≥1 order in the window with an open PO", clears when "PO settles". Store Home (Which cards populate the list): C-20 is listed as "close-specific". vs Order Management (Epic B): the rep "enters payment as a PO Number" (no paid or unpaid status). Store Status & Lifecycle (Edge cases): "Closed with unsettled payment (open PO)".	A) Payment status comes from an outside system (please name it). B) Add a paid/unpaid status to orders in the Orders spec. C) Drop C-20 until a source exists. Suggested: B, and limit C-20 to Closed stores.	The card can't be built. Home isn't allowed to invent the status itself.
Q-16	P2	Gap	After a store is switched to a different team, C-21 lists managers who came from the old team until they are "kept or removed", and C-22 flags any of them who can still sign in. The keep-or-remove question is asked once, in a pop-up during the switch. If the rep chooses to keep them, where is that choice saved so the cards go away?	OI-32. Store Home (C5 — Settings & access): C-21 trigger "≥1 manager record whose source team is no longer the connected team", clears when "Records are kept or removed"; C-22 clears when "Access is revoked, or the record is confirmed kept". vs Store Settings (Epic A1): "the modal lists any existing manager records imported from the previously connected team and asks whether they should be kept or removed. It is a prompt, not an automatic cleanup".	A) Save a "kept" mark on the manager record in Settings (a new field owned by Settings). B) Only show C-21 if the rep closed the switch pop-up without answering. C) Drop C-21 and keep only C-22. Suggested: A.	A kept manager would keep the card showing forever. Home can't save the choice itself, because Home stores nothing.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-17	P2	Gap	Within each colour group, cards are meant to follow a fixed order "recorded in the catalogue", but the catalogue tables have no order column. What is the order?	OI-7. Store Home (Presentation, ordering & limits): "Within a tier, order by cost of delay, defined as a fixed per-condition rank recorded in the catalogue above, not by recency and not by count." Store Home (Epic J — Acceptance criteria): "cards are ordered Blocking → Action → Informational, and identically on every render for the same store state."	A) Use the card number order (C-01 first) within each group. B) The requirement owner supplies a ranked list per group, for example red cards: C-03, C-04, C-22, C-11, C-12, C-09. Suggested: B.	Developers can't build the ordering, and the order decides which five cards are visible when more than five apply.
Q-18	P2	Gap	The table of which cards can appear in each store state leaves several cards unplaced. In a Draft store, can these appear: C-07 (teams carry no products), C-19 (days with no team able to order), C-21/C-22 (managers from a previous team), C-24 (invited managers who haven't signed in) and C-27 (products not in a category)? Should C-05 stay off in Draft, even though every rostered player is "missing gear" before launch? In a Closed store, can C-15 and C-19 appear? C-14 can't, and C-15 depends on C-14.	OI-23. Store Home (Which cards populate the list, by store state and store type): Draft: "C-04, C-08, C-09, C-16 — plus catalog conditions C-10 to C-13"; Draft cannot hold "Every order, Roster Bank, and window condition"; Closed cannot hold "C-14 (no live window to be closing)". Store Home (Dependencies): "Gating belongs in the resolver rather than the view layer".	A) Draft also allows C-07, C-19, C-21, C-22, C-24 and C-27, and C-05 stays off. Closed excludes C-14, C-15 and C-19. B) Keep the table as written, so those cards never show in Draft. Suggested: A.	The logic that decides which cards show needs a complete list for each state. Without one, cards will be missing or wrongly shown before launch.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-19	P2	Gap	Which rep actions should add a row to "Recently worked on"? The spec gives rules and examples, but no list of the screens and actions that record a row, and it says each screen must be switched on one by one.	Store Home (Dependencies): "The write path must be explicitly opt-in per surface, not a blanket hook on every mutation". Store Home (Epic D — What qualifies): "A write against a resumable surface — one with a stable deep link".	A) The requirement owner supplies the list, for example: product pricing and details, roster edits, CSV import, Roster Bank commits, division and team edits, each Settings card, the announcement message. B) Every rep edit on any screen with a direct link, except deletes. Suggested: A.	Can't be estimated or built. Each screen on the list needs its own work.
Q-20	P2	Conflict	Which numbers does the "In your store" summary show for Orders? The Reports tab uses "Orders" for completed sales and "Pending Orders" for "active orders currently processing". The Orders tab uses "Pending Orders" for orders not yet sent to the factory.	Store Home (Epic E — In your store): "24 orders · 4 to submit" and "order counts follow the Orders tab's". vs Store Analytics (Reports Tab): "Card 2 · Orders — total volume count of closed sales" and "Card 3 · Pending Orders — count of active orders currently processing". Order Management (Epic A): Pending lists orders "placed in the storefront but not yet approved by the rep and sent to the factory".	A) Orders row = the Orders tab's All Orders count, and "to submit" = the Pending Orders count on the Orders tab. B) Use the Reports tab figures. Suggested: A, and align the Reports tab's "Pending Orders" wording.	The rule "its count matches the count on the owning tab exactly" can't be tested while two tabs use the same words for different numbers.
Q-21	P2	Conflict	Can the rep change which manager is the main contact inside the manager edit pop-up? Home says no: it's set only in store creation Step 1 and Settings → General. But Settings describes choosing and changing the main manager on the manager card.	OI-11. Store Home (Epic F — Designating the point of contact): "The designation is not set in the manager edit modal." vs Store Settings (Epic A2c): "Changing the primary: Given a non-primary record, when the rep designates it primary, then the previous primary is demoted" and Store Settings (Scenarios): "adding a second coach to the manager list after setup, or promoting one to primary".	A) The choice sits on the Settings manager card outside the shared pop-up, so Home's copy of the pop-up has no such control (as Home says). B) The choice is inside the pop-up, so Home would need a different version, which Home's rules forbid. Suggested: A, and say so in Settings Epic A2c.	Home is required to open "the same modal" as Settings. Until this is settled, that pop-up either includes the control or doesn't.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-22	P2	Conflict	Home labels the main manager "Point of Contact" and says Home must not ship until Settings uses the same label. Settings and store creation Step 1 currently say "primary". Will both change to "Point of Contact" before Home ships?	OI-12. Store Home (Epic F): "Settings must adopt the same term, and Home must not ship ahead of it." vs Store Settings (Epic A — League/Team Manager Information card): "with the primary record marked" and Step 1 — Basics (Epic E): "The primary row is labelled as such in the UI".	A) Yes, rename the on-screen label in Settings and Step 1 before Home ships. B) Ship Home showing "Primary" for now. C) Ship Home first and rename later. Suggested: A.	By Home's own rule this blocks release, and it involves a spec (Step 1) that Home doesn't mention.
Q-23	P2	Ambiguous	In Settings, Team Logo and Team Colors are edited inside the "Edit Store Details" pop-up, which also holds Change Team, the store name, tax, fundraising and the point-of-contact settings. On Home, should editing the logo or colors open that whole pop-up, or a smaller editor with just the logo and colors?	Store Home (Epic G — Brand assets panel): Team Logo and Team Colors are "Rendered, editable via the existing component" and "Home does not host Change Team." Store Home (Governing rule 1): "Where a component cannot pass those tests, Home routes instead of hosting." vs Store Settings (Epic A): "The modal edits Store Name, Team Name, Team Branding & Sport (connect-to-team component with coach import, Team Logo drop zone, Team Colors, Sports multi-select)".	A) Show only the existing Logo drop zone and Colors control on Home, saving to the same fields. B) Link to Settings → General → Edit Store Details instead of editing on Home. Suggested: A.	Developers can't tell which part to reuse, and a cut-down version could break Home's "same component" rule.
Q-24	P2	Conflict	Settings hasn't decided which fields lock after a store launches. Home says Team Logo and Team Colors never lock. Is that decided, and will Settings record it?	OI-13. Store Home (Epic G — Availability): "Team Logo and Team Colors do not lock after launch either — decided, and to be recorded in Settings Epic B's lock list (Appendix A, 8d)." vs Store Settings (Epic B): "the exact fields/inputs that lock after launch are TBD and must be defined before build" and "Whether re-binding the store to a different team should be permitted after launch is part of the TBD lock list".	A) Confirmed: logo and colors never lock; add this to Settings Epic B. B) They lock after launch like other branding, and Home shows them read-only on live stores. Suggested: A.	Decides whether the brand panel can be edited on live stores.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-25	P3	Conflict	What is the "recent work" section called on screen: "Pick up where you left off" or "Recently worked on"? The summary at the top of the page still uses the old name.	Store Home (Executive Summary — The Solution): "Pick up where you left off is a per-rep, per-store list of the rep's own recent authoring actions" vs Store Home (Epic D — What it is): “The section is named "Recently worked on", not "Pick up where you left off".”	A) "Recently worked on" (Epic D's decision); update the summary text. B) "Pick up where you left off". Suggested: A.	Small: designers and writers may use the old name.
Q-26	P3	Ambiguous	Blocking (red) cards are defined as cases where someone outside the workspace is already affected. In a Draft store nobody can order yet, but C-04, C-09 and C-12 still show as red cards. Is that intended?	Store Home (Governing rule 2 — Severity tiers): "Buyers, orders, or fulfillment are stopped right now. Someone outside the workspace is already affected." and "Tier is fixed per condition, not per store." vs Store Home (Which cards populate the list): Draft can hold "C-04, C-08, C-09, C-16 — plus catalog conditions C-10 to C-13".	A) Yes, keep them red (a card's colour never changes), and reword the definition to "would be stopped". B) Show them in blue while the store is Draft. Suggested: A.	Small: affects colour and wording consistency.
Q-27	P3	Ambiguous	Do blue (Action) cards put a dot on their tab label? The spec says red cards do and grey cards don't, but doesn't mention blue ones in that section.	OI-8. Store Home (Epic A): "Blocking-tier conditions produce the dot; Informational-tier conditions do not." vs Store Home (Dependencies): "Tab-label indicators need the resolver's per-tab roll-up, restricted to Blocking-tier conditions".	A) No: only red cards add a dot (matches the Dependencies section). B) Yes: red and blue cards add a dot. Suggested: A, and say so in Epic A.	Small: the dot rule could be built two ways.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-28	P3	Gap	Which spec owns the store status label in the workspace header, and what does it say today? Home says that label still reads "Active" and points to Launch & Status Controls, but that spec now uses Open and Closed and doesn't describe a status label in the header.	OI-28. Store Home (Epic A): "The store status chip, the storefront URL, the Preview Store control, and the Setup Guide re-entry point remain in the header where they are specified". Store Home (Epic I): “Home must not render "Active" — a state that survives only in the stale Launch & Status Controls page.” vs Launch & Status Controls (Acceptance Criteria): "the live state was previously named Active; Open and Closed are the names used throughout" and (Solution): "status is surfaced on each dashboard store card".	A) Launch & Status Controls owns the header status label and shows Draft, Open, Closed or Archived. B) Tabbed Store Dashboard owns it. Suggested: A, and remove the out-of-date "Active" remark from Home.	Small: the label Home is meant to repeat has no clear owner.
Q-29	P3	Conflict	The Setup Guide's second card teaches the workspace tabs and lists five. Should it now include Home?	OI-29. Tabbed Store Dashboard (Epic B — Card set): "The tabs. Products, Orders, My Team(s), Reports, Settings — one line each." vs Store Home (Epic A): six tabs with Home first. Store Home (Governing rule 3): "Orientation content stays where it lives."	A) Add a line for Home to card 2 (owned by Tabbed Store Dashboard). B) Leave card 2 as it is. Suggested: A.	New reps would be taught a tab list that's out of date.
Q-30	P3	Gap	Home links to the Close Report on Closed and Archived stores, and C-17 opens "Reports → Store Close Report". The Reports tab spec doesn't describe a Close Report entry at all. Should the Reports spec add it?	OI-25. Store Home (Epic B): "Given a Closed or Archived store, then Home surfaces a route to the Close Report." Store Home (C4): C-17 goes to "Reports → Store Close Report". Store Status & Lifecycle (On-demand access): "A Store Close Report entry sits at the top of the Reports tab." vs Store Analytics (Reports Tab): no Close Report entry is described.	A) Add the Close Report entry to the Reports tab spec. B) Link to the View Close Report link on the Store Status card in Settings instead. Suggested: A.	The link may land on a page that doesn't show the report.

Q-31	P3	Conflict	Home bans the words "approve" and "container" for pending orders, but the Orders spec still uses both. Should the Orders spec say "not yet submitted" and "group" instead?	OI-9. Store Home (C1): “Home says "n pending orders to submit", not "approve n orders".” Store Home (Epic I): "Container is internal shorthand and must not appear on Home". vs Order Management (Epic A): Pending lists orders "placed in the storefront but not yet approved by the rep and sent to the factory"; Order Management (Epic B): "Pending orders are grouped into containers that mirror the store's roster architecture"; Store Status & Lifecycle (Report contents): "any below-MOQ containers still open at close".	A) Change the Orders spec to "submitted" and "group". B) Leave it. Suggested: A.	Wording drift between tabs, which Home's "No new vocabulary" rule is meant to prevent.
Q-32	P3	Ambiguous	Where should C-03's "Assign managers" button take the rep: Settings → Distribution & Fulfillment (as written), or the Orders tab, where an "Assign Managers" pop-up already collects the missing managers and then carries on with the submit?	Store Home (C1): C-03 goes to "Settings → Distribution & Fulfillment, with the affected division auto-opened" vs Order Management (Epic B): "an Assign Managers modal blocks the flow — collecting the group manager, or a team manager for every unassigned roster, with address verification — and on completion automatically continues to the review modal."	A) Settings, as written. B) Orders → Pending Orders, opening Assign Managers. Suggested: A.	Small: decides the button's destination.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-33	P3	Conflict	Home requires C-05 (players haven't ordered required gear) to show how old the oldest item is, but C-05's card text shows the window close date instead. Which is right? What does C-05 show on always-open stores that have no close date? And what does "oldest" mean for a player who hasn't ordered?	OI-22. Store Home (Presentation, ordering & limits): “"Oldest placed 3 days ago" is required on C-01, C-05, and C-06” vs Store Home (Epic I — Rep-facing headlines): C-05 detail line “Window closes date — n of them have no email or phone, so a reminder won't reach them”.	A) Drop the age rule for C-05, and leave out the close date on always-open stores. B) Show "oldest" as days since the player was added to the roster. Suggested: A.	Card text and data can't be finished.
Q-34	P3	Ambiguous	Does C-10 ("products are still generating images") include products already on the storefront whose artwork was changed and whose new images are being made? The Products spec only hides products while their first artwork is being processed.	Store Home (C3): C-10 trigger "≥1 decorated product in Render pending whose renders have not landed"; Store Home (Epic I): C-10 detail line "Customers can't see them until the images are ready". vs Products Tab (Epic H): "Render gate (first-time decoration): a decorated product cannot be made visible until its render set exists".	A) Only products on their first artwork (hidden from customers). B) All products waiting for images, with different text for those already visible. Suggested: A.	The card could tell the rep that customers can't see a product when they can.
Q-35	P3	Ambiguous	Do the buttons on C-11 ("Retry") and C-16 ("Launch store") act from Home, or only take the rep somewhere? Home is meant to send the rep to the right page, not do the action itself.	OI-20. Store Home (Epic I): C-11 button "Retry"; C-16 button "Launch store". Store Home (C3): C-11 goes to "Products → the affected product's detail page"; Store Home (C4): C-16 goes to "Workspace header → Launch control". Store Home (C1 notes): "Home routes; it does not send."	A) Both only take the rep somewhere: C-11 opens the product page (rename the button, for example "Go to product"); C-16 opens the same launch confirmation as the header's Launch button. B) Both act straight from Home. Suggested: A.	Small: the button labels promise actions Home doesn't perform.
Q-36	P3	Ambiguous	May C-12 (bundles with only one item left) use the word "Incomplete"? Home asks someone to check whether reps see that word, and the Products catalog card already shows it.	OI-21. Store Home (Epic I): "Verify whether reps see that state label on the Products tab" vs Products Tab (Epic D): “A bundle in the Incomplete state shows "Incomplete — needs a second item" in place of its price range”.	A) Yes, use "Incomplete" to match the catalog card. B) Keep the current card text without it. Suggested: A.	Small wording mismatch between Home and Products.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-37	P3	Conflict	C-27's text says products "aren't in a category", but the Products tab calls the same thing "Uncategorized" (its filter option and catalog section). Home's rule is to use the owning tab's word. Which should the card say?	OI-30. Store Home (Epic I): C-27 headline "n products aren't in a category" and Governing rule 1: "Home uses the label the owning spec uses." vs Products Tab (Epic D): "The filter carries an Uncategorized option listing products whose category has been deleted".	A) Use "Uncategorized" to match the Products tab. B) Keep "aren't in a category". Suggested: A.	Small: reps would meet two names for one thing.
Q-38	P3	Conflict	C-18 (orders still being made after the store closes) appears while orders are "not yet shipped", but only goes away when every order is "Delivered". Should it go away at Shipped or at Delivered?	OI-18. Store Home (C4): C-18 trigger "Store is Closed with ≥1 order not yet shipped", clears when "Every order reaches Delivered or is cancelled"; Store Home (Epic I): C-18 headline "n orders are still being made".	A) Goes away at Shipped (matches the headline). B) Stays until Delivered, and the headline changes to "still on their way". Suggested: A.	The count shown on the card won't match the condition.
Q-39	P3	Gap	C-24 flags team-manager invites not used after 7 days. Home sets the 7 days itself, but Home is only allowed to read limits set by the owning spec. Should the 7-day rule be added to People & Access in Settings?	OI-31. Store Home (C5): "C-24's threshold is 7 days." Store Home (Governing rule 1): "Every count, threshold, and condition on Home is read from the surface that owns it." vs Store Settings (Epic A2b): "Status is either Active (green dot, with Last login when known) or Invited · not logged in (amber dot)."	A) Add the 7-day rule to Settings Epic A2b. B) Let Home own this one limit as a stated exception. Suggested: A.	Breaks Home's own rule, and the invite list and Home could disagree.
Q-40	P3	Conflict	Which words describe an invite's status on Home? Settings uses "Active" and "Invited · not logged in". Home uses "Portal access active", "Invited, not signed in" and "haven't signed in yet".	OI-10. Store Home (Epic F): “"Portal access active" or "Invited, not signed in"”; Store Home (Epic I): C-24 headline "n invited managers haven't signed in yet". vs Store Settings (Epic A2b): "Status is either Active (green dot, with Last login when known) or Invited · not logged in (amber dot)."	A) Use the Settings words on Home. B) Change Settings to "signed in" so both match. Suggested: A.	Breaks Home's "No new vocabulary" rule. Reps see two names for one status.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-41	P3	Ambiguous	How many cards are there? The spec says 24, but C-01 to C-24, minus the retired C-25, plus C-27 makes 25 active cards.	OI-6. Store Home (Which cards populate the list): "What differs is which of the 24 registered conditions can hold." Store Home (C3): C-27 is registered; Store Home (C2): C-25 is "Retired — folded into C-05".	A) 25 active cards; update the text. B) 24 (C-27 not yet active). Suggested: A.	Small: testers may miss C-27.
Q-42	P3	Ambiguous	When the rep edits a manager, the logo or the theme colour on Home itself, should that add a "Recently worked on" row? If so, should the row link back to Home or to the Settings section that owns the field?	Store Home (Epic D — The resume record): "The surface key is the same deep-link key the rest of the workspace already uses." Store Home (Governing rule 1): "Home is a second doorway, not a second implementation."	A) Add a row that links to the owning Settings section. B) Edits made on Home add no row. Suggested: A.	Small: unclear behaviour for edits made on Home.
Q-43	P3	Conflict	Is the tab always labelled "My Team(s)", or does it change with the store type? Roster Management calls it "My Teams" on League stores and "My Team" on single-team stores, and Home says the navigation read that way in the prototypes.	OI-24. Store Home (Epic E): "the first row reads My Team(s), not Rosters" and “the navigation beside it still read My Teams / My Team”. vs Roster Management (Epic 0): "when the My Teams tab opens" and "the My Team tab drops straight into the team's player table."	A) Always "My Team(s)". B) "My Teams" on League stores and "My Team" on single-team stores, with Home's row matching. Suggested: whichever the tab really shows; Home's row copies it.	Small: Home's row may not match the tab beside it.
Q-44	P3	Ambiguous	What exactly is in the "In your store" summary? It is described as "a per-tab summary" but lists only four rows (no Settings row). Epic A also mentions a "summary strip" that repeats header information. Is that the same thing? And must "total raised" be shown, and if so, in which row?	OI-27. Store Home (Epic E): "A per-tab summary giving the rep the shape of the store" and "One row per tab, in navigation order: My Team(s), Products, Orders, Reports." Store Home (Epic A): "Home may echo header state in its summary strip". Store Home (Epic E): "What Home may show instead: total raised during the window". Store Home (Epic E): "Reports row is a route, not a KPI strip."	A) Four rows, no Settings row. The "summary strip" is the same summary, with no header information added. Total raised is optional and sits on the Reports row. B) The requirement owner gives the final row list and contents. Suggested: A.	Designers can't finish the summary layout.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-45	P3	Conflict	Settings still lists "Add from Team Database" on the manager card as an open question. Home says it is decided (yes). Is it decided, and will Settings be updated?	OI-14. Store Home (Epic F): "Settings Epic A1's standing open question closes as yes on the strength of this" vs Store Settings (Epic A1): "OPEN — to be confirmed: whether this re-fetch should be surfaced on the League/Team Manager Information card as well".	A) Yes, decided; update Settings Epic A1. B) Still open. Suggested: A.	Home sends reps to Settings → General to import a coach. If the manager card has no import button, they land somewhere without it.
Q-46	P3	Gap	Home links to the team's artwork library, but no spec says where that library sits in the product. Where should the link go?	Store Home (Epic G): "Home links to it and says which scope it is." vs Products Tab (Epic I — Team artwork library): "The library lives on the Team and persists across seasons." (no page is defined).	A) Hide the link until Products Epic I defines a page. B) Link to the Artwork Editor. Suggested: A.	The link would go nowhere.
Q-47	P3	Ambiguous	Home's League directory copies the layout and counts of the My Team(s) main view, which another spec says is being redesigned. Should the directory be built now or wait for the redesign?	Store Home (Epic H): "mirroring the tab's own arrangement of the canvas plus a standalone-teams list" vs Roster-Optional Architecture (Epic B): "The My Team(s) home view design is being reworked as part of the tab redesign".	A) Build now from today's counts and adjust later. B) Wait for the redesign. Suggested: A.	Rework risk.
Q-48	P3	Gap	Epic I gives text for every card, but not for: the empty attention list, the archived-store message, the "n more" expander, the "Recently worked on" rows, or the note under the Team Managers panel when buyers see a salesperson. Who writes this text?	Store Home (Epic D — Presentation): "Copy is specified in Epic I." Store Home (Presentation, ordering & limits): "it states plainly that nothing needs the rep right now and names the store's current lifecycle state." Store Home (Epic F): "the panel states at its foot who buyers actually see".	A) The requirement owner or a UX writer supplies it before build. B) Developers use placeholders. Suggested: A.	The screens can't be finished.
