Clarification Questions — Store Home (Home Tab)

Sources: TS-Store Home (Home Tab)-161026-011919.pdf (cited "Home p"); cross-checked against TS-Tabbed Store Dashboard-191026-075922.pdf, TS-Launch & Status Controls-161026-094523.pdf, TS-Store Status & Lifecycle-161026-094525.pdf, TS-Order Management (Orders Tab)-161026-094455.pdf, TS-Roster Management (My Team(s) Tab)-161026-092450.pdf, TS-Store Settings (Settings Tab)-161026-094514.pdf, TS-Store Analytics (Reports Tab)-161026-094501.pdf, TS-Customize New Product-161026-094448.pdf · Total: 34 (P1 3 · P2 16 · P3 15)

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-1	P1	Conflict	What is the workspace tab set and order, and where is Appendix A (the shell amendment and amendments 8b, 8d, 8e, 10) that Home depends on? (Source: OI-1, OI-2)	Home p8 Epic A: "it presents six tabs in order: Home, My Team(s), Products, Orders, Reports, Settings" and "The Tabbed Store Dashboard shell must be amended — see Appendix A" vs Tabbed Store Dashboard Epic A: "The tab count is fixed at five", tabs "Products, Orders, My Team(s), Reports, and Settings"; Setup Guide card 2 teaches "Products, Orders, My Team(s), Reports, Settings". Store Status & Lifecycle Epic A still names "Detail, Products, Roster, Orders, Reports". Home PDF ends at Dependencies (p49) with no Appendix A.	A) Home's order is authoritative; provide Appendix A and amend the Tabbed Store Dashboard (tab count, order, Setup Guide card 2) and Lifecycle tab names in the same release. B) Prepend Home to the existing order: Home, Products, Orders, My Team(s), Reports, Settings. Suggested: A, with Appendix A attached to this spec.	The navigation can't be built because two specs give different tab counts and orders. The Settings, header and shell changes Home relies on are unspecified.
Q-2	P1	Conflict	Is the launch gate (and therefore C-09 and C-16) "≥1 product added" or "≥1 visible product"? (Source: OI-3)	Home p17 C-09: "Catalog holds zero visible products"; p20 C-16: "Store is Draft and ≥1 visible product exists"; Tabbed Store Dashboard Epic B: "the launch gate requires at least one visible product" vs Launch & Status Controls: "the gate is products added, not published" and Store Status & Lifecycle Epic A: "cannot be launched until at least one product has been added".	A) Gate = ≥1 product added: C-09/C-16 key on catalog count. B) Gate = ≥1 visible product: amend Launch & Status Controls and Lifecycle. Suggested: decide once in Store Status & Lifecycle; Home reads that predicate.	If Home and the gate differ, C-16 "Your store is ready to launch" can show while Launch is disabled, or the Blocking C-09 card can show while Launch is enabled. This breaks the "Home has a defect if it disagrees with the tab" rule.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-3	P1	Conflict	Should C-22 (a left-behind manager still holds portal access) stay on after the manager record is removed but the invite is still active? (Source: own review)	Home p23 C-22 trigger: "C-21's trigger and that person holds an active or pending invite"; C-21 clears when "Records are kept or removed" vs Settings Epic A2b: "Removing a manager record does not revoke access ... any invite issued against that person remains active until revoked"; Settings A1: "A branding fix must never quietly leave the wrong person able to read this store's reporting and rosters".	A) Key C-22 on the invite of a person imported from the previous team, independent of whether the manager record still exists (needs Settings to keep that source link on the invite). B) Keep the current trigger and accept the gap. Suggested: A.	Removing the record clears C-21, so C-22 disappears while the person can still read reports and rosters. That is the exact access risk the only Blocking Settings card exists to catch.
Q-4	P2	Conflict	Do manager-role users (team managers, league directors) who enter the store workspace see the Home tab, and with which condition set? Is the Team Manager Portal OPEN item confirmed as "no"? (Source: OI-20)	Home p6: "Who is this for? The store owner (rep)" and "OPEN — ... whether the Team Manager Portal gains an equivalent surface ... Recommendation: no, this version ... Confirm before build"; Home p49: "If Home is ever extended to team-manager-role users, the resolver must return a permission-filtered condition set" vs Store Status & Lifecycle: "A rep and an invited team-manager-role user each see the auto-trigger once" on workspace entry; Settings Epic C: Danger Zone "hidden for manager-role users"; Roster Management: My Team(s) users include "reps, team managers, league directors".	A) Portal: no Home area. Manager-role users in the workspace see Home with a permission-filtered set. B) Manager-role users in the workspace see no Home tab (contradicts "never conditional"). C) Same full set as the rep. Suggested: confirm the Portal is "no", and A for workspace users.	Without an answer the resolver could show managers Blocking cards they can't resolve, or the tab rule "never conditional" breaks for them.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-5	P2	Conflict	How should C-17 (Close Report not yet viewed) work, given that it reads a flag Home says it never reads, and the auto-presented report clears it before Home is usable? Where does its route land? (Source: OI-9, OI-25)	Home p21 C-17 trigger: "Store is Closed and this user has not seen the report for this close event", route "Reports → Store Close Report" vs Home p10 Epic B: "Home reads neither flag and writes neither" and p49 "Home reads neither ... nor the Close Report's per-user-per-close-event seen flag"; Lifecycle Epic H: "Any dismissal marks the report as seen for that user". For the route, Lifecycle says "A Store Close Report entry sits at the top of the Reports tab", but Reports Tab Epic A lists only "KPI summary row ... Team Revenue chart ... Team Fundraising Report", and Settings Epic H says the report is "reachable from the Store Status card in Schedule & Status".	A) Remove C-17. The Epic B echoed route covers re-access. B) Keep it, let Home read the seen flag (amend Epic B and Dependencies), and accept it is mostly unreachable. C) Redefine the trigger (needs new state). For the route: add the Close Report entry to the Reports Tab spec, or route to Settings → Schedule & Status. Suggested: A, and amend the Reports Tab spec.	The resolver would carry a predicate that never fires to the user. The deep link may point at a Reports entry the Reports spec doesn't define.
Q-6	P2	Gap	Which condition covers the freight-gate blocker "missing destination address on an assigned manager"? Where does C-03 route, and can C-03 hold on Individual Team stores? (Source: OI-13)	Home p12 C-03: "≥1 pending group whose group or team manager is unassigned", route "Settings → Distribution & Fulfillment, with the affected division auto-opened"; C-04 covers only the store ship-to address vs Settings Epic A3: "incomplete manager assignments — or a missing destination address on an assigned manager — block pending-order submission", and "Order Fulfillment Mapping. Shown only for League stores"; Order Management Epic B: the "Assign Managers modal blocks the flow" during submission.	A) Widen C-03 to "freight routing unresolved for ≥1 pending group" (unassigned OR assigned-without-address), naming the divisions. B) Add a new registered condition for an assigned manager without an address. C) Out of scope. Also state the Individual Team route (General manager card, or C-04 only). Suggested: A.	Orders can be blocked at submission with no Home card, which defeats the C-03/C-04 dwell-time metric. A C-03 card on an Individual Team store would route to a section that doesn't render.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-7	P2	Gap	Where should C-05 and C-15 route? Roster Management has no store-wide player view. (Source: OI-17)	Home p12 C-05 / p20 C-15 resolve to "My Team(s) → store-wide player view, filtered to incomplete"; Home p48 notes only the filter is new vs Roster Management: a per-team player table with a Team Gear column, a per-player gear drawer, and "a store-wide view from the My Team(s) home" for the Roster Bank only.	A) Add a store-wide player view with an incomplete filter to Roster Management (new scope, to be estimated). B) Route to the canvas or team list. C) Route to the first affected team's player table. Suggested: A, sized before estimating Home.	The primary action of two cards has no target, or there is hidden new My Team(s) scope.
Q-8	P2	Ambiguous	Does C-05 count only committed players, when Roster Management counts captures toward team-gear completion? Should C-05 hold on Closed stores? (Source: own review)	Home p12 C-05 trigger: "≥1 committed player record with un-ordered Team Required gear" and p25 Closed: "Most of the catalogue ... C-14 (no live window to be closing)" as the only exclusion vs Roster Management Epic 5: captures "do count toward team-gear completion tracking"; Lifecycle: Closed = "closed to new orders".	A) Committed records only, Open stores only. B) Committed records only, Open and Closed. C) Use Roster Management's completion read as-is, including captures. Suggested: A, so the count matches the My Team(s) completion figure.	The C-05 count may not match the tab (AC "count matches the owning tab exactly"). On Closed stores the card could stay on permanently, asking reps to chase players who can no longer order.
Q-9	P2	Gap	Do C-09–C-13 and C-27 ship in v1, given their owning specs (Products Tab, Product Categories, System Modals & Toasts) and the required Products amendment and filters aren't in the input set? (Source: OI-32)	Home p48: "C-27 depends on an amendment to Products Tab that must land first ... must not ship ahead of that amendment" and "Audit which of those filters exist today ... the most likely source of hidden scope"; triggers cite "Products Tab, Epic H/J/F" and "Product Categories, Epic D", which are not provided.	A) Ship C-09–C-13 after the filter audit, and defer C-27 until the Products amendment lands. B) Ship all of them when the amendments land. Suggested: A. Supply the Products Tab spec for verification.	Six triggers and routes can't be checked. Scope and estimates for the filters are unknown.
Q-10	P2	Conflict	Does C-15 fire at 7 days (C-14's urgent range) or at 14 days, and which spec owns a 14-day threshold? (Source: OI-4)	Home p20 C-15 trigger: "C-14's trigger and C-05's trigger both hold" vs Home p22: "C-14 matches the pill at 7 days. C-15 fires earlier, at 14 days"; Home p3: "Home must not recompute ... 'days left'"; Settings Epic E defines only the pill that "turns urgent (red) inside the final 7 days".	A) 7 days, per the trigger as written. B) 14 days, added as a resolved threshold in Settings Epic E. C) 14 days defined in the Home catalogue (an exception to Rule 1). Suggested: B.	The trigger can't be implemented as written, and option C breaks the no-second-computation rule.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-11	P2	Conflict	What is C-20's tier and store-state scope, and which spec owns "open PO / PO settles"? (Source: OI-5, OI-14)	Home p22 catalogue: C-20 "Closed with unsettled payment", tier "Action", trigger "≥1 order in the window with an open PO", clears "PO settles" vs Home p41: "C-18, C-20, and C-23 ... All three are Informational conditions"; Home p25 lists C-20 as close-specific although the trigger has no Closed clause; Order Management Epic B captures only "payment as a PO Number" with no settlement state; Lifecycle edge case "Closed with unsettled payment (open PO)".	A) Informational, Closed only, once a PO payment-status field is defined in Order Management. B) Action, any state. C) Defer C-20 until a PO settlement state exists. Suggested: C, or A if Orders adds the state.	Ordering, colour and copy tone are undefined, and the predicate has no owning state to read.
Q-12	P2	Gap	How does C-21/C-22 "kept" get recorded, so the resolver can tell a manager record was confirmed kept? (Source: OI-15)	Home p22-23 C-21 clears when "Records are kept or removed"; C-22 when "the record is confirmed kept"; route "Settings → General → League/Team Manager Information" vs Settings Epic A1: keep/remove is a one-time "prompt, not an automatic cleanup" in the reconnect modal, with no persisted decision; Home p3: "Home persists nothing about the store".	A) Settings persists a "kept after re-bind" flag on the record (Settings amendment) and offers keep/remove on the manager card. B) "Kept" = the rep dismissed the re-bind prompt. Store that outcome. C) Only removal clears C-21. Suggested: A.	A kept record never clears, which makes C-21 and C-22 permanent cards, or the resolver can't be written.
Q-13	P2	Conflict	Which spec owns C-24's 7-day "not activated" threshold? (Source: own review)	Home p24: "C-24's threshold is 7 days" and trigger "Invited · not logged in beyond a threshold (Store General Settings, Epic A2b)" vs Settings Epic A2b defines status only ("Invited · not logged in (amber dot)") with no age threshold; Home p3: "Every count, threshold, and condition on Home is read from the surface that owns it".	A) Add the 7-day threshold to Settings Epic A2b. B) Accept it as a Home-defined threshold (an exception to Rule 1). Suggested: A.	Home would hold a second computation, and the threshold has no owner to keep it in sync.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-14	P2	Gap	What are the fixed within-tier ranks ("cost of delay") for each condition? (Source: OI-6)	Home p24: "Within a tier, order by cost of delay, defined as a fixed per-condition rank recorded in the catalogue above"; the Epic C catalogue columns are only ID, Condition, Tier, Trigger, Resolves to, Clears when.	A) Supply a rank per condition. B) Use catalogue ID order within each tier. Suggested: A, as a catalogue column.	The deterministic ordering AC (p42) and the top-five cap can't be implemented.
Q-15	P2	Ambiguous	Which conditions can hold in each store state, and how many conditions are registered: 24 or 25? (Source: OI-8, OI-18)	Home p25: "which of the 24 registered conditions can hold"; the catalogue holds C-01–C-24 plus C-27 (C-25 retired, C-26 unregistered). Draft row: "C-04, C-08, C-09, C-16 — plus catalog conditions C-10 to C-13" omits C-07, C-21–C-24 and C-27. Closed row lists only "C-14" as cannot, although C-15 depends on C-14 and C-09/C-16 are Draft-only.	A) Provide a full condition × state × store-type matrix (Draft, Open, Closed, Archived; League, Individual; Pop-up, Always-on). B) Treat any condition not listed as "cannot" as able to hold. Suggested: A, with the count corrected to 25.	Gating belongs in the resolver (p49), so the gaps mean cards leak or are suppressed wrongly, e.g. C-07 is always on for a new Draft League store.
Q-16	P2	Conflict	Is the resume-event label stored, or composed at read time from an identifier? (Source: own review)	Home p27: a resume event records "the acting rep, the store, the surface key ..., an entity reference ..., a short human-readable label, and a timestamp" vs Home p27: "The label is composed from the entity, not stored as prose" and p48: the record holds "field-group or operation identifier".	A) Store a field-group/operation identifier only, and compose the label at read time. B) Store the label as well. Suggested: A.	The data model for the only new table Home adds is ambiguous, and renamed entities could show stale labels.
Q-17	P2	Gap	Which surfaces and write types qualify for the resume trail, what are their identifiers and label patterns, and how are bulk events collapsed? (Source: OI-28)	Home p48: "The write path must be explicitly opt-in per surface"; p27 qualifies "A write against a resumable surface — one with a stable deep link"; p28 bulk ops are "one event ('imported 40 players')"; p29: "Copy is specified in Epic I", but Epic I has no resume-row copy.	A) Supply an opt-in table: surface, write types, field-group id, label pattern, deep-link key, and collapse key for bulk events. Suggested: A, prioritising My Team(s) per p28.	Engineers can't wire the opt-in hooks or the row copy, and coverage would be guessed.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-18	P2	Conflict	The Settings amendments Home relies on (Point of Contact label 8e, Logo/Colors lock exemption 8d, Add from Team Database on the manager card 8b) aren't in the Settings spec. Do they land before Home ships? (Source: OI-22, OI-23, OI-24)	Home p31: "Settings must adopt the same term, and Home must not ship ahead of it"; p35: "Team Logo and Team Colors do not lock after launch either — decided, and to be recorded in Settings Epic B's lock list"; p33: "Settings Epic A1's standing open question closes as yes" vs Settings A2c: "the primary record marked"; Settings Epic B: "OPEN — ... the exact fields/inputs that lock after launch are TBD", re-bind post-launch is open; Settings Epic A1: "OPEN — ... an 'Add from Team Database' action beside 'Add manager' ... confirm the surface before build".	A) Amend Settings first (8b, 8d, 8e) and gate the Home release on it. B) Ship Home with "Primary", Logo/Colors following the Settings lock list, and coach import routed to Edit Store Details. Suggested: A.	Two labels for one designation, a brand panel that may edit locked fields, and a coach-import route to a control that may not exist.
Q-19	P2	Conflict	Is the point-of-contact designation set in the manager edit modal? Home says no; Settings says yes. (Source: own review)	Home p32: "The designation is not set in the manager edit modal ... the manager modal was never the place, so Home opening the full shared modal correctly gives the rep no designation control" vs Settings Epic A2c: "Changing the primary: Given a non-primary record, when the rep designates it primary ... The modal states this before saving", plus the Settings scenario "adding a second coach to the manager list after setup, or promoting one to primary".	A) The designation is in the shared manager modal, so Home exposes it too (and Home's "route to Settings" text is removed). B) Move designation out of the manager modal into Settings → General only (Settings amendment). C) Home hides the control (a Home-local variant, which the AC forbids). Suggested: A or B, decided in Settings.	The "same modal, no Home-local variant" AC can't be met alongside "Home does not set the designation".
Q-20	P3	Conflict	How do C-04 and C-09 meet the Blocking definition on Draft stores, where no buyers or orders exist? (Source: OI-19)	Home p4 Blocking: "Buyers, orders, or fulfillment are stopped right now. Someone outside the workspace is already affected" vs Home p25 Draft can hold "C-04, C-08, C-09, C-16"; Lifecycle Draft: "Existing / in-flight orders: None".	A) Keep Blocking on Draft (red rail, primary button). B) Treat them as Action on Draft (would need separate conditions per Rule 2). Suggested: A, and reword the tier definition to include "cannot launch / cannot ship".	Inconsistent treatment and possible review churn.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-21	P3	Ambiguous	If Home echoes header state, how is a Closed store shown without amber, and how are invite statuses shown? (Source: OI-27)	Home p9: "Home may echo header state in its summary strip"; AC p42: "no amber is used anywhere on Home" vs Lifecycle Epic G: "Closed (amber)"; Settings A2b: "Invited · not logged in (amber dot)".	A) Echo the status as text or neutral with no colour. B) No header echo on Home. Suggested: A. Invite statuses shown as neutral text.	Visual design conflict found late.
Q-22	P3	Ambiguous	Do Action-tier conditions put a dot on their tab, and do conditions that resolve to the header (C-16) or Reports put a dot anywhere? (Source: OI-7)	Home p9: "Blocking-tier conditions produce the dot; Informational-tier conditions do not"; Home p48: "restricted to Blocking-tier conditions".	A) Blocking only. B) Blocking and Action. Suggested: A, per Dependencies; no dot for header-routed cards.	Dot behaviour differs between implementers.
Q-23	P3	Ambiguous	When several groups are below MOQ, does C-02 render one card naming several groups, and which group does it scroll to? (Source: OI-12)	Home p24: "One card per condition, not per record"; C-02 copy p38: "Division 3 is under the minimum to ship" and route "Orders → Pending Orders, scrolled to that group".	A) One card naming up to N groups, scrolling to the first in Orders sort order. B) One card with a count ("n groups"), no scroll. Suggested: A.	Copy and deep link are undefined for the multi-group case.
Q-24	P3	Ambiguous	Does C-04 clear on any non-empty address or only a verified one, and does a switched-off Pick-up Location trigger it? (Source: own review)	Home p12 C-04 trigger: "the destination address is empty", clears "A verified destination address exists" vs Settings A3: "a location switched off at workspace level leaves this store with no destination, surfaced as the 'No destination address' state" and addresses are "validated against the map service before it is accepted".	A) Trigger = the Settings "No destination address" state, covering cleared, never set and switched-off location. Clear = that state is gone. Suggested: A.	The trigger and clear predicates are not symmetric, so cards may stick or miss the switched-off location case.
Q-25	P3	Conflict	Should Order Management's "not yet approved by the rep" and "container" be corrected to Home's bound terms (Submit, group)? (Source: OI-21)	Home p13: "Home says 'n pending orders to submit', not 'approve n orders'. There is no approval step"; p37: "Say group, never container" vs Order Management Epic A: Pending lists orders "not yet approved by the rep and sent to the factory"; Epic B: "Pending orders are grouped into containers".	A) Amend Order Management wording. B) Accept as internal wording only. Suggested: A for rep-facing text; "container" stays internal.	Vocabulary drift between Home and the Orders tab, against the "no new vocabulary" rule.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-26	P3	Ambiguous	Does the C-11 "Retry" button retry the render from Home, or route to the product detail page? Does C-16 "Launch store" open the launch confirmation directly? (Source: own review)	Home p18 C-11 resolves to "Products → the affected product's detail page" but its button is "Retry" (p39); C-16 resolves to "Workspace header → Launch control", button "Launch store" (p40); Home p2: "Home routes"; Launch & Status Controls: launch goes through the "Launch Team Store" confirmation modal.	A) Both route only: C-11 to the detail page, C-16 opens the existing launch confirmation modal. B) C-11 retries in place. Suggested: A, with button labels kept as written.	Possible Home-side action logic that the "Home routes" rule forbids.
Q-27	P3	Ambiguous	Does C-18 stay on for orders that have shipped but not been delivered? (Source: OI-10)	Home p21 C-18 trigger: "Store is Closed with ≥1 order not yet shipped", clears when "Every order reaches Delivered or is cancelled".	A) Trigger and clear both use "Shipped". B) Both use "Delivered". Suggested: A, matching the headline "still being made".	The card may stay on during transit, or the predicate is inconsistent.
Q-28	P3	Gap	What does "accepted" mean for clearing C-19, given the scheduler has no accept action? (Source: OI-16)	Home p21 C-19 clears when "Gap is closed or accepted" vs Settings Epic E: "coverage-gap detection that flags days between sequential windows where no team is open", with no accept state.	A) Clears only when the gap is closed. B) Add an "accept gap" state to Settings Epic E. Suggested: A for v1.	A card that can't be cleared on purpose becomes permanent.
Q-29	P3	Conflict	Which age, if any, does C-05 show, and which owning read supplies the "oldest" timestamps and C-05's "n of them have no email or phone" count? (Source: OI-11)	Home p25: "'Oldest placed 3 days ago' is required on C-01, C-05, and C-06" vs C-05 detail line p38: "Window closes date — n of them have no email or phone", which has no age; Order Management and Roster Management expose no oldest-age or contact-less count.	A) Drop the age requirement for C-05. Source C-01/C-06 ages and the contact-less count from the owning services (spec amendments). B) Define C-05's age as days since the window opened. Suggested: A.	Copy is inconsistent and Home risks computing figures locally.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-30	P3	Ambiguous	Summary rail: does Settings get a row, which order count is the headline, is "total raised" in scope, and what label does the first row use on Individual Team stores ("My Team" vs "My Team(s)")? (Source: OI-26)	Home p29: "One row per tab, in navigation order: My Team(s), Products, Orders, Reports" and "a second route into each tab"; "24 orders · 4 to submit"; p30: "What Home may show instead: total raised"; AC p42: "first row is labelled My Team(s)" vs Roster Management: "the My Team tab drops straight into" the roster on Single-Team stores; Order Management All Orders excludes pending; Reports "Orders — total volume count of closed sales".	A) No Settings row. Orders headline = All Orders plus Pending total from the Orders service. Total raised shown in the Orders or Reports row. The label mirrors the live tab label per store type. Suggested: A.	Rail counts may not match any tab, and the label rule conflicts on Individual stores.
Q-31	P3	Conflict	Should the Team Managers panel use Settings' invite status labels, and does "Invite" send an invite or route to People & Access? (Source: own review)	Home p31: the row states "'Portal access active' or 'Invited, not signed in'"; p32: "the panel offers Invite against it, routing to People & Access" vs Settings A2b statuses "Active" and "Invited · not logged in", with Send Invite owned by People & Access.	A) Use the Settings labels verbatim; Invite routes (pre-filled email) without sending. Suggested: A.	A second vocabulary for invite status, and doubt over whether Home creates entitlements.
Q-32	P3	Gap	Please supply the missing rep-facing copy: empty state, archived state, "n more" expander, resume rows, Team Managers foot note (who buyers see), the "adding a manager grants no portal access" statement, blocked-removal reason, and removal confirmation. (Source: OI-29)	Home p29: "Copy is specified in Epic I"; p25: the empty state "states plainly that nothing needs the rep right now and names the store's current lifecycle state"; Epic I (p36-42) covers only card headlines, detail lines and buttons.	A) Add a copy table to Epic I for these strings. Suggested: A.	Copy is improvised during the build, risking banned or completion language.
Q-33	P3	Ambiguous	Can C-12 say "Incomplete", i.e. do reps see that label on the Products tab? (Source: OI-31)	Home p41: "Verify whether reps see that state label on the Products tab — if they do, the card may use it; if it's internal, it stays off". The Products Tab spec is not in the input set.	A) Rep-facing, so it may be used. B) Internal, so it stays off (current copy). Suggested: B unless the Products owner confirms.	Minor copy rework.

ID	Priority	Type	Question	Source / quoted text	Options / suggested answer	Impact if unanswered
Q-34	P3	Gap	What latency budget and large-store size must the attention resolver meet? How does "identical order on every render" hold while cards arrive progressively? (Source: OI-30)	Home p47: "The resolver must be cheap enough to run on every workspace entry ... Conditions are resolved progressively, with Blocking-tier predicates first"; AC p42: "ordered ... identically on every render for the same store state".	A) Set a target (e.g. first Blocking card ≤ N ms, all cards ≤ M ms at X players, Y orders, Z products) and render placeholders in final rank slots. Suggested: A.	Performance can't be tested, and cards may visibly reorder as they load.
